TABLE A - PERSONNEL AND RESPONSE TIME REQUIREMENTS

5.2 Response Time Measurement

- a. Response Time shall be measured in minutes and integer (whole) seconds from the time the call is received by Contractor from the Medical Dispatch Center until arrival at the Incident Location by the FRALS, or until the call is cancelled by a public safety agency or Medical Dispatch Center.
- b. Contractor's FRALSs shall report on-scene time or staging location time to its dispatch center immediately upon arrival at the scene/staging location.

5.3 Calculating Changes in Call Priority

- a. **Upgrades** - If an assignment is upgraded prior to the Arrival at Incident of the FRALS (e.g. from a Charlie to Delta), Contractor's compliance and fines shall be calculated based on the shorter of:
 - Time elapsed from dispatch to time of upgrade plus the higher priority Response Time standard, or,
 - The lower priority Response Time standard.

b. **Downgrades** - If a call is downgraded, prior to arrival on scene of the FRALS (e.g. from a Delta to a Charlie), Contractor's compliance and fines shall be determined by:

- If the time of the downgrade occurs after the FRALS has exceeded the higher priority Response Time standard, the higher priority Response Time standard shall apply; or,
- If the time of the downgrade occurs before the FRALS has exceeded the higher priority Response Time standard, the lower priority Response Time standard shall apply.
- In all such cases, documentation must be presented for validation of the reason why the priority status was downgraded. If the downgrade was justified, in the sole discretion of the County, the longer standard shall apply.

c. **Reassignment Enroute**

If a FRALS unit is reassigned en-route or turned around prior to Arrival at Incident Location (e.g., to respond to a higher priority request), compliance and fines shall be calculated based on the Response Time Standard applicable to the assigned priority of the initial response. The Response Time clock shall not stop until the arrival of a FRALS on the scene from which the unit was diverted.

d. **Canceled Calls**

If a call is canceled prior to the FRALS Arrival at Incident, the compliance and fines shall be calculated based on the elapsed time from dispatch to the time the call was canceled. In situations where the FRALS has responded to a location other than the Incident Location (e.g. staging areas for hazardous materials/violent crime incidents, non-secured scenes, or where rugged terrain precludes access), Arrival at Incident shall be the time the FRALS arrives at the designated staging location or the nearest public access point to the patient's location

5.4 **Response Time Late Response Exemptions ("Exemption")**

a. Contractor may request that a late response be excluded from the calculation of Response Time standards ("an Exemption"), if that call falls into one of the following categories:

- A declared Multi-Casualty Incident ("MCI") or disaster that the County EMS Director determines has had a material impact on Contractor's resources.

- There was a delay because information relayed by the Dispatch Center was substantially incorrect so as to prohibit timely arrival at the call.
- b. Request for an Exemption must be in writing, and received by the County EMS Director within ten (10) calendar days following the end of the month in which the event occurred. Response Time Exemptions may be granted by the County on a per call basis, following review and investigation by the County. Calls that are approved as an Exemption shall not be included in the calculations for Response Time compliance. Such requests must include all of the following:

Response Times for departments with low call volume (less than 100 calls per month) shall be evaluated when the Contractor has responded to 100 calls. Once the 100 call level is exceeded, the number of calls to achieve the 100 call threshold will start over in the next month.

- b. Calculating FRALS response time penalties:

- Compliance will be calculated based on combining the Echo, Delta, and Charlie levels of responses and all subareas (Metro/urban, Suburban/Rural, Wilderness). If compliance falls below ninety percent (90%) the subsidy will be reduced by 10% for the next month.
- Compliance for Contractors with low response volume (less than 100 calls per month) will be determined by accumulating the monthly call volume until a total of 100 calls is exceeded. Failure of the Contractor to meet the 90% compliance level will result in a 10% reduction of the subsidy for a period equal to the number of months required to exceed the 100 call minimum. For example, if it takes a Contractor three months to respond to more than 100 calls, the penalty deduction will be applied to the next three subsidy payments. Once the 100 call level is exceeded, the number of calls to achieve the 100 call threshold will start over for the next calendar month.

- c. If FRALS calls are not categorized at the Contractor's dispatch center, compliance will be measured as if all calls are within the ECHO Category.

- d. If Response Time compliance **drops below 90%**, a performance improvement plan must be submitted to the EMS Director with the monthly compliance report. The performance improvement plan must identify each problem that led to the delayed response and the steps being taken to correct each such problem.

- 14.3 Failure to Respond-** Contractor's subsidy shall be reduced by a penalty of \$2,500 for each failure by the Contractor, with the exception of operational necessity, to provide FRALS, to a location within the Primary Service Area where a response has been requested by the dispatch center. The imposition of a penalty does not release Contractor of any other liability from its failure to respond. A request for an exemption of this penalty due to operational necessity may be submitted to the EMS Director. The request shall be reviewed by a panel of three, including the EMS Director and two fire chiefs selected by the Alameda County Fire Chiefs Association who are not involved with the issue.
- 14.4 Failure to Provide Timely Reports** - Contractor shall promptly deliver each required report to the County. Contractor's subsidy shall be reduced by a penalty of \$50 per day for each day a report is late.
- 14.5 Failure to Meet Minimum In-Service Equipment/Supply Requirements-** Contractor's subsidy may be reduced by a penalty of up to \$1000 per failed inspection for any FRALS that fails to comply with EMS Policies with respect to equipment and supplies. Penalties shall be proportionate with the potential for impact on patient care.
- 14.6 Failure to Provide Arrival at Incident Time**
- a. Contractor's subsidy shall be reduced by a penalty of \$50 penalty each and every time a FRALS Unit is dispatched and Contractor fails to document the Arrival at Incident time.

EXHIBIT B - DEPICTION & DEFINITION OF SUB-AREAS

1. **Density Area Designation:** Designations of call density areas were accomplished by reviewing the call density for every square kilometer grid in the County. The grids were normalized by examining the underlying road structure with the goal of creating zones with Rural/Suburban contiguous with Metro/Urban, eliminating anomalous pockets of high or low density in the midst of one of the density areas, and creating a map that can be incorporated into the computer aided dispatch system.

Sub-area definitions are for general descriptive purposes only; the actual sub-areas are identified on the maps in this Exhibit. The map defines the subarea, not the actual number of calls received during any period. The identified Sub-areas are subject to change at the discretion of the County.

2. **Sub-Areas:** There are 3 possible Sub-areas contained within each ERZ.

Metro/Urban call densities are determined by identifying the square kilometers that average 2 or more calls per month and at least half of the surrounding square kilometers also average 2 or more calls per month.

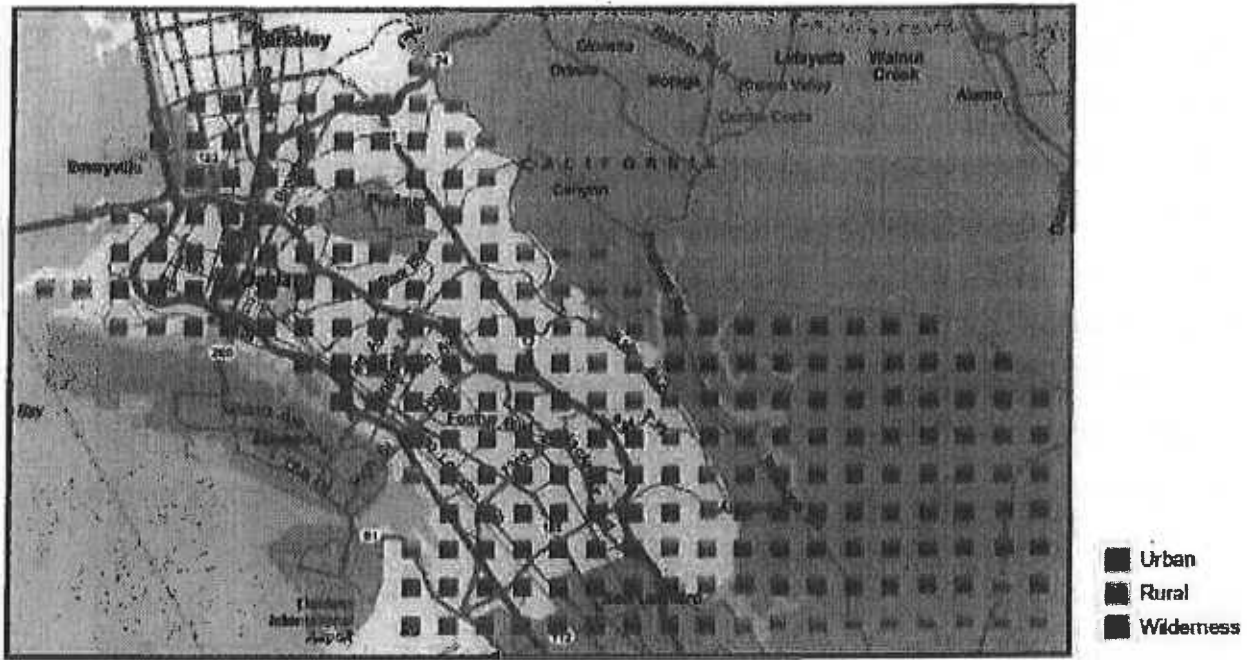

Rural/Suburban areas are those in which the average calls per square kilometer are between 0.25 and less than 2.0 calls per month on average.

Wilderness/Low Call Density is determined by identifying the square kilometers that average less than 0.25 calls per month (or one call every 4 months, on average)
