SCOPE OF SERVICES

Project Overview and Objectives

The project is located on Washington Avenue, between West Juana Avenue and Castro Street, San Leandro. Washington Avenue is a high crowned street with parabolic cross-section, which makes crosswalks non-compliant with Americans with Disabilities Act (ADA). The goals of the project include, making the crosswalks compliant with ADA by reducing the crowns, bringing the abutting curb ramps to compliance and redesigning the curb return radius at the corner of Williams for reduced turning speed. This is a federal-aid grant project, and therefore, all designs and activities must comply with the Local Assistance Procedure Manual (LAPM).

Scope of Work

This project is for the restoration of the subject street to provide a new riding surface with a 25-year life expectancy. The consultant shall provide a design that addresses the issues related to compliance with ADA along the project corridor and provide for accessibility for all modes of transportation. In general, the project shall address Complete Street elements. The project includes the following tasks.

Task A – Project Management and Coordination

Consultant's project manager will act as the single point of contact with the City and check in on at least a monthly basis to discuss and coordinate details, schedules and issues with the City. Coordination efforts will consist of conference calls, emails and any necessary in-person meetings.

Upon issuance of a Notice to Proceed, consultant will schedule a kick-off meeting with City to clearly identify and discuss project objectives, scope, schedule and budget. At this meeting, the design team will establish contacts for each party, discuss critical path items and review overall project schedule, standards, guidelines and expectations. consultant will continuously manage the project, attend meetings and provide support, as necessary, for coordination between staff and stakeholders. Consultant's scope of work also includes providing quality assurance and quality control for each milestone submittal. Summary of services under this task include:

- Kick-off meeting coordination and attendance
- Up to four (4) design team meetings with City, as well as ongoing coordination by email or phone calls
- File setup maintenance, management and sharing
- Supervision of and coordination with subconsultants
- Quality Assurance and Quality Control reviews prior to making milestone submittals to City
- Monitoring the project budget
- CPM schedule updates using Microsoft Project
- Monthly invoices

Deliverables

Meeting agendas and minutes, schedule updates and invoices

Task B – Topographic Survey

Consultant will provide topographic surveying and best fit right of way mapping for the project. The topographic survey limit includes Washington Avenue between Castro Street and W. Juana Avenue (approximately 1,400 linear feet±), as well as 50 linear feet of adjoining side streets to facilitate a smooth

transition from the reduced roadway crown within the project limits to the existing pavement on side streets. Consultant will collect detailed topographic survey data for the intersection corners where curb ramps were found or measured to be non-ADA compliant during preliminary field walk and require replacement.

The survey may be performed in combination of Terrestrial LiDAR and supplemented by field surveys with Robotic Total Station. AutoCAD Base Map will be prepared based on City of San Leandro CAD Standards. All planimetric features, visible surface utilities, will be mapped including inverts of sanitary sewer and storm drain structures. Street cross-sections every 50/100 feet will be provided. Horizontal and vertical control will be based on California State Plane Coordinates (NAD83, NAVD88). Alternatively, the consultant can use local City benchmark data and a local basis of bearings if preferred. City will provide the type and location of survey monuments and the elevation of benchmarks.

Best fit right of way limits from available records will be shown on the construction drawings. No right of way acquisition will be necessary for the project; however, should the consultant encounter areas where the proposed improvements will encroach upon private property, consultant will review those areas with the City, and make adjustments to the proposed improvements if necessary.

Deliverables

Topographic survey.

Task C – Geotechnical Investigation

Consultant will apply for a no fee City of San Leandro encroachment permit to collect pavement cores and subgrade samples. These locations will be marked in the field for USA clearance.

Field work will consist of coring along Washington Avenue on either side of the street. Four (4) cores are proposed along the corridor within the parking lanes. Subgrade samples will be collected from a depth of 0-3 feet (measured from lip of gutter) for R value tests. Consultant shall collect enough data to provide recommendations for FDR treatment, if required for the project. All work will be performed within parking lanes.

Laboratory testing for R-value will be conducted on collected samples. Core samples will be measured for asphalt thickness and photographed for documentation. A summary of the field work will be provided in a table. The results of the field work and the R value tests will be provided in a Memo, and all related data will be shown on tabular format. Consultant shall recommend the most effective design section using the most current design practices based on the R value and the Traffic Index.

Deliverables:

Geotechnical Investigation Memo and pavement design recommendations

Task D – Data Collection

Consultant will collect and review existing right-of-way information, record drawings, utility maps and information, assessor and subdivision maps, survey notes, sample plans and specifications provided by the City.

Consultant will conduct site reconnaissance of the project, perform visual assessment of existing site conditions, evaluate project impacts to existing roadway and utility improvements, and confirm the project scope and approach with City staff. Existing surface facility locations and types will be field verified. Visual field assessment of existing site conditions will include the following: *existing surface facilities (pavement, curb, gutter, sidewalk, curb ramps, pavement markings, aboveground utilities, monuments, driveways, drainage swales, street furniture,*

traffic signs, trees), features on adjacent properties (fences, walls, walkways, signage, mailboxes), and pavement conditions, overall character of the setting including streetscape amenities in surrounding area.

City will coordinate with various utility companies that have facilities within the project area to request mapping of their facilities in the area, notify utility companies of their facilities or covers which need to be relocated or adjusted to grade because of the proposed improvements; and discuss the project and utility adjustment schedules. City will request and provide all utility maps from utility agencies at the beginning of the design stage. All utilities within the proposed improvements will be shown on plans. Consultant will perform utility potholing at up to **sixteen (16)** locations, enough to understand the characteristics of the underground utilities within the improvement area. Consultant will provide pothole data report. Alternatively, consultant may opt to use the Ground Penetrating Radar (GPR) to locate the utilities. Consultant and City shall agree on the best method to completely identify the utilities within the project limits.

Deliverables:

Pothole data report

Task E – 50% Design, 100% Design and Bid Package Submittals

Consultant will prepare base map showing existing improvements and develop plans at the 50%, 100% and Final/Bid design levels in accordance with the latest City, Caltrans, and California MUTCD Standard. The plans will provide sufficient detail to construct the proposed improvements. Consultant will propose curb extensions/bulbouts and modify the existing traffic signals at Washington Avenue/Williams Street intersection, and perform vehicle turning movement analysis around proposed curb extensions/bulbouts at intersection corners. City will provide PDF or CAD files of the existing as-built traffic signal plans. Consultant will verify the accuracy of the as-built plans. Any discrepancy between as-built plans and field conditions will be referred to the City for resolution. Proposed modifications to the existing traffic signals will be shown on the City-furnished as-built plans without creating any existing signal system from scratch. Existing wiring to be shown in conductor schedules will be based on the City-furnished as-built plans. Upon requested by the City, CSG can evaluate and recommend green infrastructure, including bioretention area, permeable crosswalks, etc. as an additional service.

City anticipates the plan sheet package to include, Title/General Notes/Key Map/Typical Sections, Existing Condition & Horizontal Control Plan, Demolition Plan, Plan/Profile Plan, Construction Details, Signing and Striping Plan and Signal Modifications on City-Furnished As-Built Plan.

Deliverables

The following deliverables will be submitted to the City at each level of completion:

- Full size hardcopies and PDFs of the 50% and 100% level plans
- PDFs of the technical Specifications and estimates
- Responses to City's comments on 50% and 100% submittals
- Full size stamped and signed hardcopies of bid level plans
- Electronic copies (in AutoCAD) of bid level plans
- Electronic copies of technical specifications and estimates (in word and excel, respectively)
