SCOPE OF SERVICES

Project Description:

The City's Shoreline Development plan has a project to demolish existing improvements at the San Leandro Marina and construct a new park along the existing jetties and at some locations into the water of the SF Bay. An inventory of items at the Marina that may be demolished is contained in a report by GHD dated January 2018 and concept plans for the new park are illustrated in a presentation created by Gates and Associates in October 2017. The project is adjacent to land that contains the Marina Inn and Horatio's restaurant, both of which are to remain. The project is also adjacent to land that is proposed for development as described in an agreement between the City and Cal Coast Companies dated July 22, 2020.

Refer to the site exhibit, titled "Limit of Work Map" attached to this agreement for the project limit, which includes areas that are hatched.

The improvements generally include landscaping, paving, two public restrooms, and water access ramps. Except where improvements provide access to the water or transition to existing work to remain, new improvements are to be built above the central bound sea level rise, it is envisioned that this will be accomplished by raising the grade of the jetties about three feet. Any additional jetty height will require protection from erosion. The restrooms are envisioned to be pre-fabricated off site, foundations and utility connections will be built on site. The project shall develop concepts for and provide room for adaptations necessary to protect these improvements against the upper bound sea level rise. Improvements required to protect the area from the upper bound sea level rise are not included in the project, they will be designed and installed as part of a future phase of the project. The bridge over the marina entrance is anticipated to be constructed in a future phase, the first phase will thus locate the 'bay trail' along the east edge of the existing marina basin.

The construction estimate for the project, including demolition, jetty stabilization, soil import, and park improvements is \$34M; however, City has only identified \$22M in funding for this work. A cost estimate and narrative will be issued for value engineering options to reduce the cost of construction and / or phasing of park improvements will be necessary unless additional funding is identified. It is anticipated that the Project will be separated out into phases to meet the construction estimate. This estimate does not include soft costs or the owner's contingency.

Optional Services

1. **Wetland Delineation:** A wetland delineation will be conducted to identify the extent of existing jurisdictional waters for the public parcels on the site. The delineation will be prepared using US Army Corps of Engineers (Corps) methodology, with a total of up to 10 data sample points taken as necessary to confirm any wetland features and extent of regulated waters. The estimated high water mark, top of bank, and boundary between potential wetlands and uplands will be plotted using rational methodology, and mapped to show jurisdictional features. This task includes attendance at a single field verification meeting with a Corps representative, and minor revisions to the original delineations. If extensive revisions or further detailed analysis is requested by the Corps, this scope and cost would have to be expanded. The verified wetland delineation would provide the City with a clear understanding of the limits of jurisdictional waters at the site.
2. **3D renderings:** Meet with City staff to review locations and views for up to six (6) 3D rendering views at the following locations: elbow, promenade, bridge node, south basin/boat launch, hotel node and apartment node. Develop 3D Sketchup file which includes landscape features of specific development area view which may include play structures, shade elements, walls, sidewalks, planting areas, site furniture, railings, and gardens. It is assumed that all architectural background information and modeling of proposed architecture will be provided by the Prime Developer's consultant team, and is not within the scope of this rendering service.
3. **Kayak Launch Dock:** The consultant team will provide analysis and conceptual design, up to 30% design level, of one kayak launch dock that would face the interior basin. The analysis would include addressing accessibility, materials for walking surface, slope stabilization and fill associated with the launch ramp.
4. **Conceptual Bridge Abutment Design:** The consultant team will provide conceptual design of the future bridge abutments for space planning purposes. The future bridge will be shown on the BCDC plan review set if this feature is required to obtain design approval.
