EXHIBIT A

SCOPE OF SERVICES

Lake Chabot Road is a two-lane collector that runs east to west above Chabot Creek and Lake Chabot. Approximately 2000 linear feet of roadway between Chabot Terrace and Astor Drive shows signs of settlement due to movement of the hillside below the road. The road has several catch basins that discharge to the hill side between the road and creek. Visible erosion has occurred at some of the storm drain discharge points. This project includes design, permitting, and construction of hillside stabilization as well as improvements to the channelization of water into existing catch basins and improvements to the storm drain out falls that these drains are connected to. A preliminary design has been prepared as part of a geotechnical investigation in 2011.

This contract is for design of the abovementioned improvements as detailed below.

Task 1 Project Management and Kick off Meeting

Consultant will coordinate with the City and orient Consultant personnel with the current site conditions, preliminary design, potential site constraints, and precise needs of City staff. This will be accomplished by holding a kickoff meeting with the City. Through a kickoff meeting the proposed schedule and milestones will be reviewed. At the kickoff meeting, Consultant will review, with City Staff the background of the project, including site history, topographic survey, and identification of project constraints such as environmental issues, property ownership, and the like. Parties will discuss how the City selected the stabilization method identified in the RFP and discuss the opportunities for value engineering to reduce the construction cost of the project.

Task 1 Deliverables

- Meeting Minutes/Summary notes from kickoff meeting,
- Project Schedule

Task 2 Topographic Survey

This task will include site review, right of way surveys and research, topographic surveys, drafting, and utility mapping.

Site Review: A topographic survey will be prepared by Consultant which will include locations of existing improvements, utilities, critical items which may affect project schedule and exiting survey control. Consultant will take detailed photos and notes of the critical items on Lake Chabot Road.

Right of Way Survey and Research: Title reports and record maps from the City will be obtained by Consultant. Consultant will locate and tie in existing property corners and monuments found in the field, and determine the existing right of way (ROW) and property lines from title, record map, and

field information. ROW data will be incorporated in the project base maps. Areas of potential encroachment will be identified and brought to the attention of the City.

Topographic Survey: The survey limits will include all improvements within the paved roadway including up to 10 feet on the downhill (fill) side of the roadway and 5 feet on the uphill (cut) side of the roadway. The survey will include all structures, dikes, curbs, gutters, trees (4" or greater), striping, edge of pavement, lighting, drainage, surface utilities, fencing, grade breaks, slide limits (if apparent), and above ground utilities.

Drafting: CONSULTANT will prepare base mapping in AutoCAD for the preparation of construction plans on 24"x36" plan sheets. Mapping will include, 1-foot contours, spot elevations (1/10 foot) and shall be 20 scale, unless otherwise requested. Base maps will incorporate information obtained during the site review and field survey.

Utility Research and Coordination: Records of the utility companies will be requested based on the utilities found during the field surveys. The utility base map information will be plotted in the base drawings. We will coordinate with the various agencies within the project area so that this work may be brought to the City's attention and coordinated if possible.

Task 2 Deliverables:

- Topographic Survey in AutoCad

Task 3 Asbestos Evaluation

Asbestos Evaluation: Consultant will complete a sampling and testing program to evaluate the presence of asbestos that may be contained within the serpentinite bedrock that underlies the site. The laboratory testing will provide insight on the presence of bedrock, and will allow Consultant to develop detailed specifications on monitoring air quality should this naturally asbestos be encountered.

Filed Sampling and Testing: Consultant will evaluate maps and data for the site and locate spots for sample extraction. Up to four samples will be obtained by means of a rock hammer from bedrock outcrops found on the upslope side of the roadway. Samples will be bagged and taken to a certified asbestos testing laboratory for evaluation.

Asbestos Evaluation Memorandum: When the sampling and testing program is complete, CONSULTANT will produce an asbestos evaluation memorandum to present laboratory data and summarize our findings and recommendations. The memorandum will be submitted to the City for review and discussion.

Task 3 Deliverable

- Asbestos Evaluation Memorandum

Task 4 – Value Engineering

Geophysical Survey: A seismic refraction survey will be developed along the downslope edge of the roadway. Empirical estimates of drilling and coring ability and earthwork factors may also be obtained from the seismic velocities of soil and rock layers.

Develop Stabilization Limits and Alternatives: Stabilization limits will be developed based on pavement distress and the depth to bedrock indicated on the boring logs from a previous subsurface exploration completed by Treadwell & Rollo, and identified in the geophysical survey. Three feasible stabilization alternatives will be developed with varying costs and applications.

Conceptual Estimates: Consultant will generate conceptual engineer's estimates for each alternative. The cost for each alternative will be normalized in dollars per foot of roadway.

Risk Register and Evaluation: A risk register will be developed for each alternative to summarize the pros and cons to each alternative. The alternatives will be evaluated based in the risk and ranked in order to arrive at the selected alternatives for stabilizing Lake Chabot Road. Risk register guidelines will follow Caltrans standard format.

Design Alternatives Memorandum: Consultant will produce a design alternatives memorandum summarizing the findings for each alternative. The memorandum will be submitted to the City for review and discussion.

Meeting with City: A meeting will be scheduled with the City to discuss the alternatives, select a preferred alternative, and initiate the preparation of plans, specifications, and engineers estimate.

Task 4 Deliverables

- Design Alternatives Memorandum

Task 5 – Plans, Specifications, And Estimates

Site Visit: Prior to the development of 30% PS&E, Consultant will schedule a site visit to identify any additional site constraints applicable to the preferred alternative.

30% PS&E: The preferred alternative will be developed and refined to a 30% design level and a plan set will be prepared in 12 x 18 inch PDF format using AutoCAD Civil 3D 2017.

It is anticipated that the 30% plan set will include the following sheets:

- Title Sheet
