## City of San Leandro

Civic Center, 835 E. 14th Street  
San Leandro, California 94577  
[www.sanleandro.org](http://www.sanleandro.org)

### **NOTICE OF AVAILABILITY AND INTENT TO ADOPT A MITIGATED NEGATIVE DECLARATION FOR 903 MANOR BOULEVARD RESIDENTIAL PROJECT AT 903 MANOR BOULEVARD, SAN LEANDRO, CALIFORNIA 94579**

**Notice is Hereby Given** that the City of San Leandro is considering a recommendation that the project herein identified will have no significant environmental impacts in compliance with Section 15070 of the CEQA Guidelines. A copy of the proposed Mitigated Negative Declaration, Initial Study, and Mitigation Monitoring and Reporting Program are on file in the San Leandro Community Development Department, 835 East 14th Street, San Leandro, California 95477. However, due to the COVID-19 pandemic, hard copies will be mailed upon request rather than accessible to the public at a physical location. If you need a hardcopy please send a self-addressed 10"x12" envelope with pre-paid postage to City of San Leandro, Planning Division, Attn: Andrew Mogensen, Planning Manager, 835 E. 14<sup>th</sup> Street, San Leandro, CA 94577. It is also available on the City's Website at City of San Leandro, Community Development Department, Planning Services, Plans & CEQA Documents:  
<https://www.sanleandro.org/depts/cd/plan/polplanstudiesceqa/default.asp>.

**REVIEW PERIOD:** The 20-day review period is from May 15, 2020 to June 4, 2020. Comments on the proposed Mitigated Negative Declaration should be provided in writing to the San Leandro Community Development Department, 835 East 14th Street, San Leandro, California 94577 by June 4, 2020 at 4:00 p.m. or email [AMogensen@sanleandro.org](mailto:AMogensen@sanleandro.org).

This proposed finding does not constitute approval or denial of the project itself, it only determines if the project could have a significant environmental impact. Projects that could have a significant impact must have an Environmental Impact Report prepared to evaluate those possible impacts in compliance with Section 15064 of the CEQA Guidelines. If you wish to challenge the City's action on this Mitigated Negative Declaration in court, you may be limited to raising only those issues you or someone else raised in written correspondence. For further information concerning this project, please contact Andrew Mogensen at (510) 577-3325.

**PROJECT LOCATION:** 903 Manor Boulevard, San Leandro, California 94579

**PROJECT DESCRIPTION:** The project would involve the demolition of the existing Manor Bowl commercial building, and the development of 39 three-story townhomes within six buildings (proposed Buildings A through F) on the project site, site totaling approximately 100,000 square feet. Each building would be approximately 37.5 feet in height. The project includes four Americans with Disabilities Act (ADA) accessible units and six below market rate units. The applicant has applied for a Planned Development, Site Plan Review, Tentative Map, General Plan Map Amendment, and Zoning Map Amendment entitlements. As part of the project, the site's General Plan land use map designation would be amended to General Commercial; the existing lot would also be divided into seven separate lots. The proposed density is 17.0 dwelling units (DU) per acre.

**DECISION MAKING AUTHORITY:** City of San Leandro Planning Commission and Board of Zoning Adjustments, and City Council

**HEARING DATE:** July 2, 2020, Planning Commission and Board of Zoning Adjustments Meeting

# Initial Study

---

The City of San Leandro, as the Lead Agency, prepared this Initial Study for the 903 Manor Boulevard Residential Project (“proposed project” or “project”) in compliance with the California Environmental Quality Act (CEQA), the CEQA Guidelines (California Code of Regulations [CCR] Section 15000 et. seq.), and the regulations and policies of the City of San Leandro, California.

## 1. Project Title

903 Manor Boulevard Residential Project

## 2. Lead Agency Name and Address

City of San Leandro  
Community Development Department  
835 East 14th Street  
San Leandro, California 94577

## 3. Contact Person and Phone Number

Andrew Mogensen, AICP, Planning Manager  
(510) 577-3325

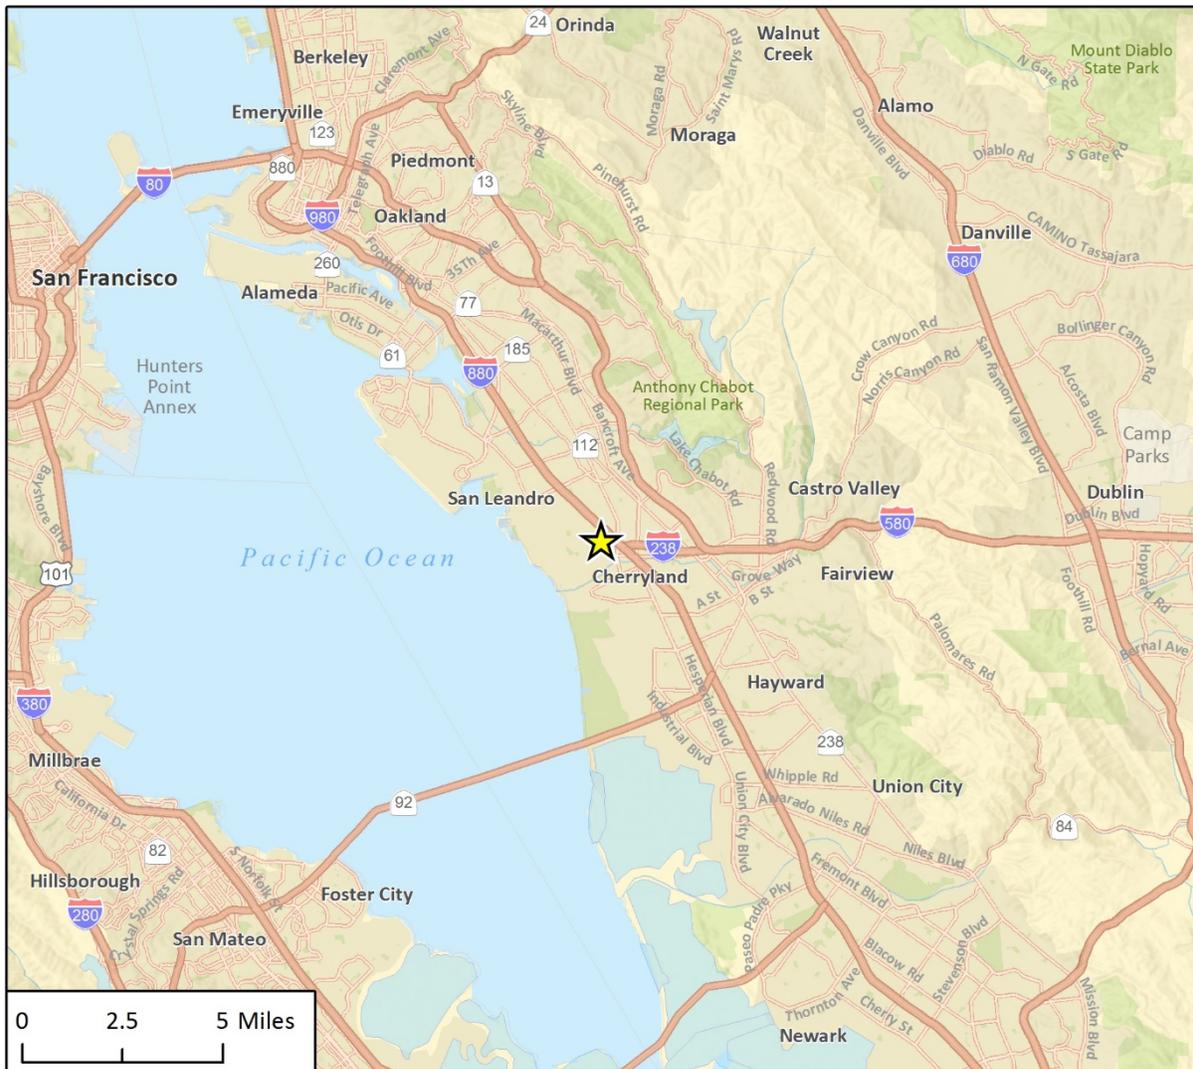

## 4. Project Location

The project site is located in the City of San Leandro, near the southern border of the City, as shown in Figure 1. The project site occupies approximately 2.3 acres on Assessor’s Parcel Number 80H-1541-036, located at 903 Manor Boulevard, on the north side of Manor Boulevard between its intersections with Zelma Street and Norton Street, as shown on Figure 2. The site includes a 30-foot public roadway easement, which is developed with Manor Boulevard and the adjacent sidewalk. The project site is approximately 240 feet south of Washington Manor Park and is served primarily by Manor Boulevard, with regional access provided by Interstate 880 (I-880) and I-238. The project site is approximately 1.7 miles from the San Francisco Bay.

## 5. Project Sponsor's Name and Address

Chris Zaballos  
ERC SC, LLC  
6683 Owens Drive  
Pleasanton, California 94588

Fig. 2 Project Location\_303MainStreet

## 6. General Plan Designation

The San Leandro General Plan designates the site as Neighborhood Commercial, which allows for small shopping centers or clusters of street front buildings with local-serving businesses and services.

## 7. Zoning

The City of San Leandro zoning designation of the site is Commercial Community District, which allows for a variety of commercial uses, such as retail stores, ambulance services, restaurants, neighborhood food markets, travel services, and business and professional offices.

## 8. Project Description

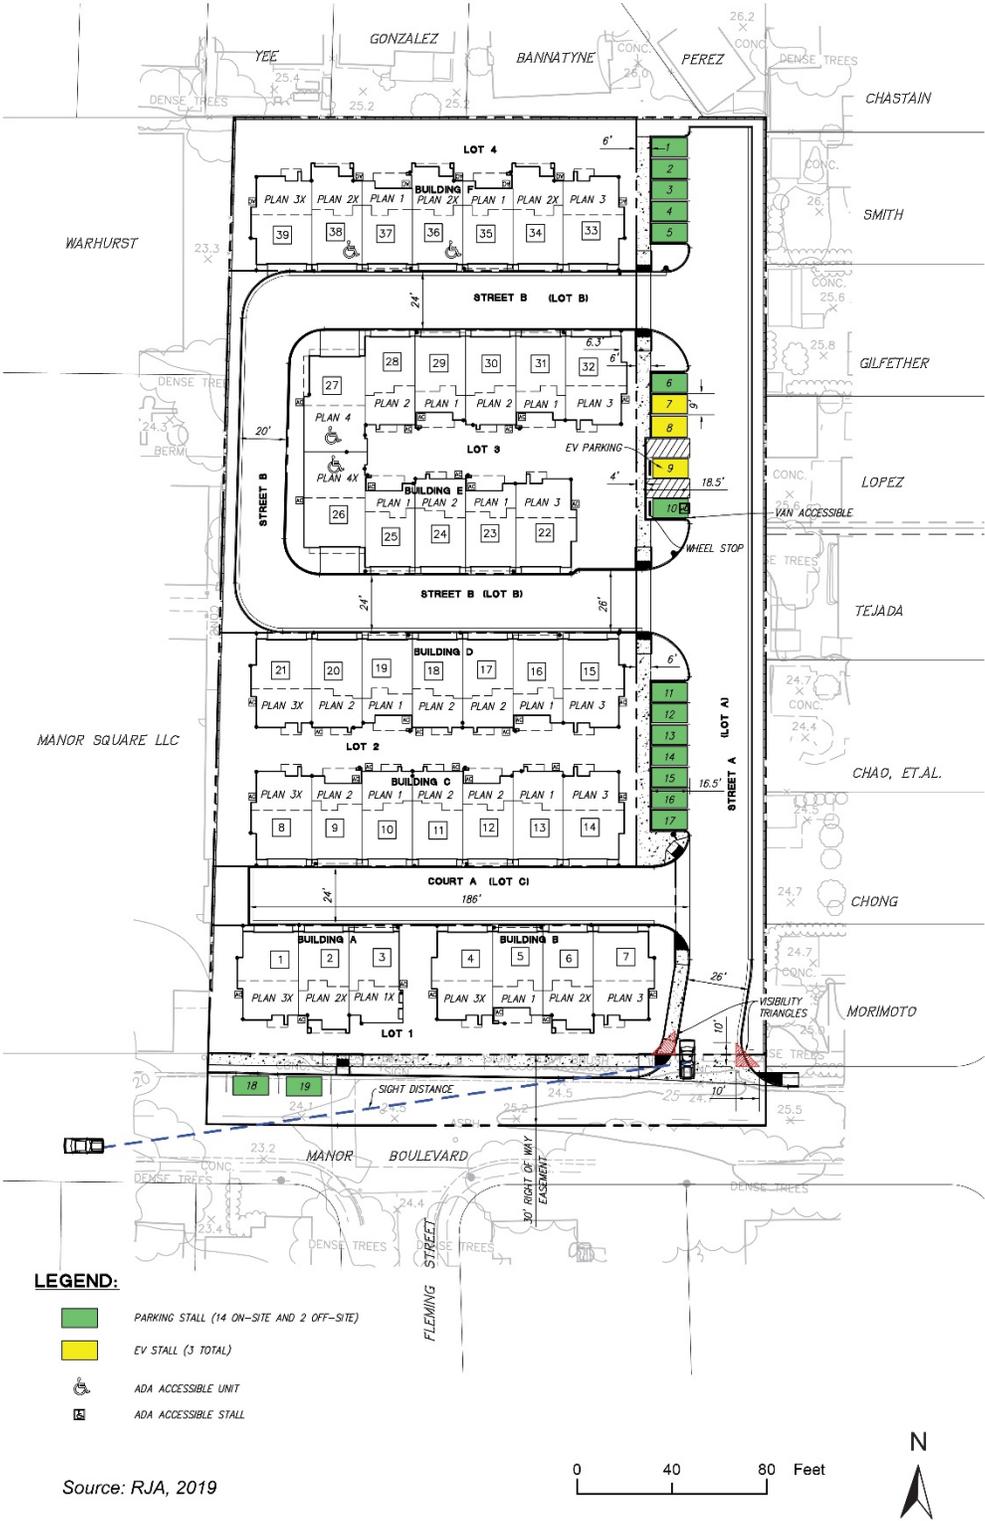

The project would involve the demolition of the existing Manor Bowl commercial building, and the development of 39 three-story townhomes within six buildings (proposed Buildings A through F) on the project site, site totaling approximately 100,000 square feet. Figure 3 provides an overview of the proposed site plan. Each building would be approximately 37.5 feet in height. The project includes four Americans with Disabilities Act (ADA) accessible units and six below market rate units. The applicant has applied for a Planned Development, Site Plan Review, Tentative Map, General Plan Map Amendment, and Zoning Map Amendment entitlements. As part of the project, the site's General Plan land use designation would be amended to General Commercial; the existing lot would also be divided into seven separate lots. The proposed density is 17.0 dwelling units (DU) per acre. The proposed project includes approximately 3,493 square feet of open space. The Planned Development application includes a waiver for the provision of open space, as the required amount of open space per the zoning code is not met by the proposed site plan.

On-site circulation would be provided by new roadways, accessed by Manor Boulevard to the south. The main access roadway (proposed Street A) would travel north-south along the eastern boundary of the site, and two east-west roadways (proposed Street B and Court A) would provide access to townhome garages. The northernmost east-west roadway (proposed Street B) would loop around Building E and intersect with the main north-south roadway twice. Concrete walkways would provide pedestrian access between street and internal surface parking spaces and townhome entrances. Bicycle parking would include four bicycle lockers.

The project would provide a total of 78 garage spaces (including 39 electric vehicle charging spaces). These spaces would be in addition to a total of 17 on-site surface parking spaces, which would include three electric vehicle charging stations and one stall compliant with the access requirements of the ADA. Two off-site surface parking spaces would also be located along Manor Boulevard (the curb along the site's Manor Boulevard frontage is currently entirely red-striped).

The project would include bioretention facilities throughout the site, totaling approximately 2,628 square feet and located adjacent to proposed buildings, sidewalks, and curbs. The project includes a total of approximately 10,672 square feet of landscaping, located around the perimeter of the site and between each proposed building. While the five existing trees located along the eastern project site boundary would be removed, approximately 110 trees would be planted on the site. The landscaping plan is provided as Figure 4.

Figure 3 Proposed Site Plan

**Figure 4 Proposed Landscaping Plan**

Source: RJA, 2019

0 35 70 Feet

A walking path would be constructed along the western project site boundary, adjacent to Buildings A, C, and D. A private concrete patio area, located next to Building E, would include bistro tables and chairs for residents to use.

The site is served by the East Bay Municipal Utilities District (EBMUD) for water supply, Oro Loma Sanitary District (OLSD) for wastewater treatment, the City of San Leandro for stormwater, Alameda County Fire Department (ACFD) for fire protection, Pacific Gas and Electric Company (PG&E) for gas and electricity, and AT&T and Comcast for telecommunications services.

Construction is anticipated to require approximately 3,150 cubic yards of cut and approximately 7,650 cubic yards of fill. Project construction would last approximately 12 months.

## 9. Surrounding Land Uses and Setting

The project site is currently developed with Manor Bowl, a 30-lane bowling alley, which is a private recreational use. The site is surrounded by urban development, primarily consisting of single-family residences, with some commercial and multi-family development located along the project site's western and southeastern boundaries. The site is bordered by Manor Boulevard to the south, residential uses along Norton Street to the east, residential uses along Devonshire Avenue to the north, and commercial uses (including restaurants, a post office, and small retail stores) at the corner of Zelma Street and Manor Boulevard to the west. Washington Manor Park is located approximately one block north of the project site. Manor Boulevard provides local access to the site, with regional access provided by I-880 and I-238. The project site is currently developed with Manor Bowl and its associated parking lot. The site is generally flat, with limited vegetation consisting of landscaped hedges along the Manor Boulevard frontage and small trees along the eastern project site boundary. The land surrounding the project site is also generally flat, with typical residential landscaping, often including grass lawns and street trees. Estudillo Canal passes under Manor Boulevard approximately 750 feet east of the project site and flows toward the San Francisco Bay.

The zoning districts immediately surrounding the project site are Residential Single-Family, Residential Multi-Family (RM-1800, 24 dwellings per acre; and RM-3000 Planned Development, 14.5 dwellings per acre), and Commercial Community, with most of the surrounding uses designated as Residential Single-Family. Surrounding General Plan land use designations include Low-Density Residential, Neighborhood Commercial, and High-Density Residential.

Figure 5 and Figure 6 provides photographs of the surrounding neighborhood, Figure 7 provides views of the project site, and Figure 8 provides architectural renderings of the proposed buildings fronting Manor Boulevard.

**Figure 5 Photographs of the Surrounding Neighborhood**

## 10. Other Public Agencies Whose Approval is Required

Approval is not required from public agencies other than the lead agency.

## 11. Have California Native American Tribes Traditionally and Culturally Affiliated with the Project Area Requested Consultation Pursuant to Public Resources Code Section 21080.3.1?

No tribes have requested consultation from the City of San Leandro pursuant to Public Resources Code Section 21080.3.1.

## Environmental Factors Potentially Affected

This project would potentially affect the environmental factors checked below, involving at least one impact that is “Potentially Significant” or “Less than Significant with Mitigation Incorporated” as indicated by the checklist on the following pages.

- |  |   |  |
|--|---|--|
| <input type="checkbox"/> Aesthetics                      | <input type="checkbox"/> Agriculture and Forestry Resources | <input type="checkbox"/> Air Quality                                   |

## Determination

Based on this initial evaluation:

- I find that the proposed project COULD NOT have a significant effect on the environment, and a NEGATIVE DECLARATION will be prepared.
- I find that although the proposed project could have a significant effect on the environment, there will not be a significant effect in this case because revisions to the project have been made by or agreed to by the project proponent. A MITIGATED NEGATIVE DECLARATION will be prepared.
- I find that the proposed project MAY have a significant effect on the environment, and an ENVIRONMENTAL IMPACT REPORT is required.
- I find that the proposed project MAY have a “potentially significant impact” or “less than significant with mitigation incorporated” impact on the environment, but at least one effect (1) has been adequately analyzed in an earlier document pursuant to applicable legal standards, and (2) has been addressed by mitigation measures based on the earlier analysis as described on attached sheets. An ENVIRONMENTAL IMPACT REPORT is required, but it must analyze only the effects that remain to be addressed.

City of San Leandro  
**903 Manor Boulevard Residential Project**

- I find that although the proposed project could have a significant effect on the environment, because all potential significant effects (a) have been analyzed adequately in an earlier EIR or NEGATIVE DECLARATION pursuant to applicable standards, and (b) have been avoided or mitigated pursuant to that earlier EIR or NEGATIVE DECLARATION, including revisions or mitigation measures that are imposed upon the proposed project, nothing further is required.

## 1 Aesthetics

	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
--	--------------------------------	--	------------------------------	-----------

Except as provided in Public Resources Code Section 21099, would the project:

a. Have a substantial adverse effect on a scenic vista?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b. Substantially damage scenic resources, including but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
c. Substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from a publicly accessible vantage point). If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
d. Create a new source of substantial light or glare that would adversely affect daytime or nighttime views in the area?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

The City of San Leandro’s visual character includes its natural setting and physical development pattern. The city is mostly developed, bordered by Castro Valley to the east, San Francisco Bay to the west, Oakland to the north, and areas of unincorporated Alameda County communities including San Lorenzo and Ashland to the south. The City is predominantly developed with well-defined suburban residential neighborhoods. Three major freeways provide access to the City: I-238, the MacArthur Freeway (I-580), and the Nimitz Freeway (I-880). Much of the City’s residential land uses are located along the shoreline adjacent to large areas of open space with recreation uses along the east side. Large swaths of industrial land uses are located along the west side of I-880 and south of Marina Boulevard (City of San Leandro 2016a). Building heights in residential, commercial, and industrial areas generally range from one to two stories, surrounded by yards and wide streets. In comparison, building heights in the major activity centers of San Leandro can be up to five stories. Industrial and commercial areas visually feature parking and storage uses, with industrial buildings as proximate visual landmarks (City of San Leandro 2016a).

*a. Would the project have a substantial adverse effect on a scenic vista?*

The project site is located in a fully urbanized area of the city, surrounded by single-family residences to the north, south, and east; a two-story multi-family development to the southeast; and a commercial development and three-story multi-family apartment complex to the west. The single-family residences surrounding the project site are all one story, while the multi-family apartment complex is three stories. The commercial center to the west is a single-story building developed in a strip-mall type design with a large surface parking lot along Manor Boulevard and Zelma Street. The north and east perimeters of the property have commercial businesses. The existing development on the project site includes a single-story commercial building in the northern portion of the property, with the southern portion consisting of a large surface parking lot.

Views surrounding the project site are urban, characterized by predominantly one-story single-family residences and the adjacent single-story commercial and multi-story residential development to the west and southeast.

The project is located in the Washington Manor neighborhood. The San Leandro 2035 General Plan designates significant views, including views looking west to the San Francisco Bay and the hills above I-580, and views looking east to the foothills from the hills near I-580. Partial pedestrian views of a small portion of the eastern foothills are accessible from public vantage points along the project site frontage. The 2035 General Plan also identifies major gateways and key gateway streets, major activity areas, and well-defined edges as areas where the City can enhance visual interest and create a sense of place. According to the 2035 General Plan, there are no identified significant views, major gateways, key gateway streets, or major activity areas in the project vicinity (City of San Leandro 2016a).

The project site is located mid-block on Manor Boulevard between Norton Street and Zelma Street. The applicant proposes to develop three-story townhouse-condominium buildings up to 37.5 feet in height. Two of the buildings (Building A and B) would front Manor Boulevard with driveway access to additional Buildings C through F along the east side of the project site. The proposed project would be roughly two stories taller than surrounding existing buildings, and the height of the new buildings would block partial views of the eastern foothills. Views of the foothills in this area would typically be experienced by motorists or pedestrians travelling along Manor Boulevard, which would be short in duration. Because the existing views of the foothills from the project site are limited, the elimination of this view from Manor Boulevard along the project site frontage would not cause a substantial change in overall views of the foothills within the project vicinity. Therefore, the project would have a less than significant impact on scenic vistas.

**LESS THAN SIGNIFICANT IMPACT**

*b. Would the project substantially damage scenic resources, including but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?*

No state designated scenic highways are in the project vicinity. However, I-580, located approximately 3 miles west of the project site, is designated as eligible. At this distance, intervening structures and vegetation currently obstruct views of the project site from I-580. The project site is not visible from a state scenic highway. No trees, rock outcroppings, or other scenic resources exist on the project site, including historic buildings (see Section 5, *Cultural Resources*). Therefore, the project would not damage scenic resources in a state scenic highway and no impact would occur.

**NO IMPACT**

- c. *Would the project substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from a publicly accessible vantage point.) If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?*

The project site is in a fully urbanized area of the City. No General Plan scenic quality policies are relevant to the project site, as included policies apply only to ocean-front properties. The primary existing public views for the project site are along Manor Boulevard. The project would not be visible from other adjacent public streets. The following analysis is specific to Manor Boulevard. Table 1 provides San Leandro 2035 General Plan existing visual character goals and policies and summarizes the project’s compliance with these policies.

**Table 1 2035 General Plan Project Consistency**

Existing Visual Character Goal or Policy	Project Consistency
<p><b>Policy LU-2.6: Preservation of Low-Density Character.</b> Preserve the low-density character of San Leandro’s predominantly single-family neighborhoods.</p> <p><b>Policy LU-2.8: Alterations, Additions, and Infill.</b> Ensure that alterations, additions and infill development are compatible with existing homes and maintain aesthetically pleasing neighborhoods.</p> <p><b>Policy CD-6.2: Recognizing Architectural Context.</b> In areas without a well-established architectural aesthetic or consistent design palette, encourage contemporary and cutting-edge design. In areas which have an established or more traditional design theme or rhythm, encourage infill development that increases architectural cohesion and reinforces the prevalent style or styles.</p>	<p><b>Consistent.</b> The project site is located in a neighborhood consisting of one-story single-family residences, with densities in the neighborhoods averaging approximately five units per acre. The site is adjacent to one-story single-family residences, a one-story commercial center, and three-story multi-family apartment complex. The proposed project would add 39 three-story townhomes distributed among eight separate building complexes on a 2.1-acre parcel, resulting in a site density substantially greater than that of the surrounding neighborhood. Though the project would be greater in height and density than the surrounding single-family residences, the project would not remove or relocate any existing single-family residences. In addition, the proposed scale would be consistent with the adjacent multi-family apartment complex to the west of project site, and the proposed architectural style would be similar to the ranch-style development found in the Washington Manor neighborhood with hip and valley rooflines, stucco, wood siding, and flat façade faces with box windows.</p>
<p><b>Policy CD-6.3: Multi-Family Design.</b> Establish high standards of architectural and landscape design for multi-family housing development. Boxy or massive building designs should be avoided, ample open space and landscaping should be provided, and high-quality construction materials should be used.</p>	<p><b>Consistent.</b> The proposed project includes both common and private open space as part of development. Landscaping would be provided along the site perimeter and within common areas. These design features, as well as the proposed balconies and articulated frontage design, would avoid boxy and massive presentation to the street. Additionally, high quality construction materials would be used, including variations of colored stucco (including greens, blues, and greys in addition to lighter colors), “wood look” siding, fiber cement siding, and slate concrete roof tiles. These variations in building material types elevate the visual quality of the project by providing variations in design and color.</p>

Existing Visual Character Goal or Policy	Project Consistency
<p><b>Policy LU-2.9: Density Transitions.</b> Avoid abrupt transitions from high density to low density housing. Where high density development occurs, encourage such projects to step down in height and mass as they approach nearby lower density areas.</p>	<p><b>Consistent.</b> The project would result in medium-high density development at 17 units per acre. The layout of the proposed parking and main site access along the eastern side of the property boundary would provide a buffer between the proposed buildings and the existing single-family residences to the east. Along Manor Boulevard, proposed landscaping and setbacks along the front of the property would soften the transition from the surrounding single-family single-story residence to the three-story townhome buildings along the front of the property.</p>
<p><b>Policy LU-2.11: Privacy and Views.</b> Encourage residential alterations, additions, and new homes to be designed in a manner that respects the privacy of nearby homes and preserves access to sunlight and views. Wherever feasible, new or altered structures should avoid the disruption of panoramic or scenic views.</p>	<p><b>Consistent.</b> The project’s proposed site design would preserve the privacy of nearby residences to the north and east of the project site and would not disrupt panoramic or scenic views. Sunlight access to nearby residences on the north and east sides of the project would be slightly decreased during winter due to the proposed project’s height and massing. However, the distance between the proposed buildings and the existing single-family residences (approximately 21 feet from to the northern property line) would preserve access to sunlight during most of the year.</p>
<p><b>Policy CD-5.4: Architectural Consistency.</b> In established neighborhoods, protect architectural integrity by requiring infill housing, replacement housing, and major additions or remodels to be sensitive to and compatible with the prevailing scale and appearance of adjacent development.</p>	<p><b>Consistent.</b> The proposed buildings would be similar in scale to the adjacent apartment complex to the west and would maintain architectural consistency with the Washington Manor neighborhood in terms of general roof shape and palette.</p>
<p><b>Policy CD-6.6: Garage Door Visibility.</b> Minimize the visibility of garage doors in new single family and multi-family residential construction.</p>	<p><b>Consistent.</b> The proposed project’s design would site all garage doors interior to the project site.</p>
<p><b>Policy CD-6.7: Architectural Interest.</b> Encourage new structures to incorporate architectural elements that create visual interest such as trellises, awnings, overhangs, patios, and window bays. Avoid solid or blank street-facing walls.</p>	<p><b>Consistent.</b> The project’s proposed architectural design would incorporate elements that create visual interest such as peaked roofs, overhangs, and private balconies.</p>

Source: City of San Leandro 2016a

As shown in Table 1, the proposed project would be consistent with applicable regulations governing scenic quality. Additionally, the project would be compliant with the Community Commercial (CC) zoning of the site, as described below:

- Density no more than 24 units per gross acre: The project proposes 39 DU on a 2.3-acre project site, or 17.0 units per acre.
- Height no more than 50 feet: Proposed buildings would be up to 37.5 feet in height.
- Side yard setbacks of 0 feet: 10.3-foot minimum side setback provided.
- Front yard setback of 10 feet: 10.5-foot minimum front setback provided.

The project would not substantially degrade the existing visual character of the site or quality of public views of the site and its surroundings. The proposed project would provide an infill residential

development within the neighborhood in contrast to the existing commercial building and surface parking lot. Therefore, impacts to existing visual character would be less than significant.

**LESS THAN SIGNIFICANT IMPACT**

- d. *Would the project create a new source of substantial light or glare that would adversely affect daytime or nighttime views in the area?*

The project site is in an urban area with moderate levels of existing lighting and is currently developed with a commercial building and surface parking lot. Existing light sources include lighting from adjacent residences, from the existing on-site parking lot and exterior lighting sources, and from the adjacent commercial center. Streetlights and vehicle lights along both Manor Boulevard and Zelma Street also contribute to the existing light environment.

The primary source of glare in the project area is the sun's reflection off light-colored and reflective building materials and finishes, and from metallic and glass surfaces of parked vehicles. The windows of the proposed new residences could generate glare from reflected sunlight during certain times of the day. Headlights of vehicles entering and exiting the project site at night would be similar to existing conditions and would not affect nearby light-sensitive receptors.

The project site is in an urban environment with numerous existing sources of light and glare. The project would not substantially alter this condition. Lighting installed on the project site would be required to comply with San Leandro Municipal Code (SLMC) requirements, including height limitations on outdoor lighting and requirements to direct light sources to prevent lighting adjacent streets, shield light sources, and utilize indirect or diffused security lighting (SLMC Sections 4-1670 and 4-1732). Therefore, impacts related to light and glare would be less than significant.

**LESS THAN SIGNIFICANT IMPACT**

*This page intentionally left blank.*

## 2 Agriculture and Forestry Resources

	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
--	--------------------------------	--	------------------------------	-----------

Would the project:

a. Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b. Conflict with existing zoning for agricultural use or a Williamson Act contract?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
c. Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code Section 12220(g)); timberland (as defined by Public Resources Code Section 4526); or timberland zoned Timberland Production (as defined by Government Code Section 51104(g))?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
d. Result in the loss of forest land or conversion of forest land to non-forest use?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
e. Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland to non-agricultural use or conversion of forest land to non-forest use?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

- 
- a. *Would the project convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?*
  - b. *Would the project conflict with existing zoning for agricultural use or a Williamson Act contract?*
  - c. *Would the project conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code Section 12220(g)); timberland (as defined by Public Resources Code Section 4526); or timberland zoned Timberland Production (as defined by Government Code Section 51104(g))?*

**903 Manor Boulevard Residential Project**

- d. *Would the project result in the loss of forest land or conversion of forest land to non-forest use?*
- e. *Would the project involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland to non-agricultural use or conversion of forest land to non-forest use?*

The project site and surrounding area is designated as Urban and Built-Up Land, with no Prime Farmland, Unique Farmland, or Farmland of Statewide or Local Importance located near the project site (California Department of Conservation 2019). The project site and surrounding area is also not under a Williamson Act contract (Bay Area Open Space Council 2006). Similarly, the project site and surrounding area do not contain forest land or timberland, as the area is fully developed with urban land uses. Additionally, the City of San Leandro does not designate or zone any land for agricultural use (City of San Leandro 2016b, City of San Leandro 2017a). Because the project site and surrounding area currently contains urban development, is not designated as important farmland or forestland, and is not under a Williamson Act contract, the project would have no impact on the conversion of farmland, forest land, or timberland to non-agricultural or non-forest uses.

**NO IMPACT**

### 3 Air Quality

	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
Would the project:				
a. Conflict with or obstruct implementation of the applicable air quality plan?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b. Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
c. Expose sensitive receptors to substantial pollutant concentrations?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
d. Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

An Air Quality and Health Risk Assessment Memorandum was prepared by Ramboll on July 30, 2019 for the project and peer reviewed by Rincon Consultants in January 2020. The following analysis incorporates the findings of this memorandum, which has been included as Appendix AQ to this report.

#### Air Quality Standards and Attainment

The project site is located within the San Francisco Bay Area Air Basin (SFBAAB), which is under the jurisdiction of the Bay Area Air Quality Management District (BAAQMD). As the local air quality management agency, the BAAQMD is required to monitor air pollutant levels to ensure that state and federal air quality standards are met and, if they are not met, to develop strategies to meet the standards.

Depending on whether or not the standards are met or exceeded, the basin is classified as being in “attainment” or “nonattainment.” Under state law, air districts are required to prepare a plan for air quality improvement for pollutants for which the district is in non-compliance. The BAAQMD is in non-attainment for the state and federal ozone standards, the state and federal PM<sub>2.5</sub> (particulate matter up to 2.5 microns in size) standards, and the state PM<sub>10</sub> (particulate matter up to 10 microns in size) standards (BAAQMD 2020). The health effects associated with criteria pollutants for which the basin is in non-attainment are described in Table 2.

**Table 2 Health Effects Associated with Non-Attainment Criteria Pollutants**

Pollutant	Adverse Effects
Ozone	(1) Short-term exposures: (a) pulmonary function decrements and localized lung edema in humans and animals and (b) risk to public health implied by alterations in pulmonary morphology and host defense in animals; (2) long-term exposures: risk to public health implied by altered connective tissue metabolism and altered pulmonary morphology in animals after long-term exposures and pulmonary function decrements in chronically exposed humans; (3) vegetation damage; and (4) property damage.
Suspended particulate matter (PM <sub>10</sub> )	(1) Excess deaths from short-term and long-term exposures; (2) excess seasonal declines in pulmonary function, especially in children; (3) asthma exacerbation and possibly induction; (4) adverse birth outcomes including low birth weight; (5) increased infant mortality; (6) increased respiratory symptoms in children such as cough and bronchitis; and (7) increased hospitalization for both cardiovascular and respiratory disease (including asthma). <sup>a</sup>
Suspended particulate matter (PM <sub>2.5</sub> )	(1) Excess deaths from short- and long-term exposures; (2) excess seasonal declines in pulmonary function, especially in children; (3) asthma exacerbation and possibly induction; (4) adverse birth outcomes, including low birth weight; (5) increased infant mortality; (6) increased respiratory symptoms in children, such as cough and bronchitis; and (7) increased hospitalization for both cardiovascular and respiratory disease, including asthma. <sup>a</sup>

<sup>a</sup> More detailed discussions on the health effects associated with exposure to suspended particulate matter can be found in the following documents: United States Environmental Protection Agency, Air Quality Criteria for Particulate Matter, October 2004.

Source: United States Environmental Protection Agency, <https://www.epa.gov/criteria-air-pollutants>

## Air Quality Management

The BAAQMD is primarily responsible for assuring that national and state ambient air quality standards are attained and maintained in the Bay Area. The BAAQMD is also responsible for adopting and enforcing rules and regulations concerning air pollutant sources, issuing permits for stationary sources of air pollutants, inspecting stationary sources of air pollutants, responding to citizen complaints, monitoring ambient air quality and meteorological conditions, awarding grants to reduce motor vehicle emissions, conducting public education campaigns, as well as many other activities. The BAAQMD has jurisdiction over much of the nine-county Bay Area, including Alameda County.

The BAAQMD adopted the 2017 Clean Air Plan (2017 Plan) as an update to the 2010 Clean Air Plan. The 2017 Plan provides a regional strategy to protect public health and protect the climate. Consistent with the greenhouse gas (GHG) reduction targets adopted by the state, the 2017 Plan lays the groundwork for a long-term effort to reduce Bay Area GHG emissions to 40 percent below 1990 levels by 2030 and 80 percent below 1990 levels by 2050. To fulfill state ozone planning requirements, the 2017 control strategy includes all feasible measures to reduce emissions of ozone precursors—reactive organic gases and nitrogen oxides—and reduce transport of ozone and its precursors to neighboring air basins. In addition, the 2017 Plan builds upon and enhances the BAAQMD’s efforts to reduce emissions of fine particulate matter and toxic air contaminants (BAAQMD 2017a).

## BAAQMD Screening Criteria

The BAAQMD recommends that lead agencies determine appropriate air quality emissions thresholds of significance based on substantial evidence in the record. The BAAQMD’s significance thresholds in the May 2017 CEQA Guidelines for project operations within the SFBAAB are the most appropriate thresholds for use in determining air quality impacts of the proposed project. The

BAAQMD developed screening criteria to provide lead agencies and project applicants with a conservative indication of whether a project could result in potentially significant air quality impacts. If a project meets all the screening criteria, then the lead agency or applicant would not need to perform a detailed air quality assessment of their project's air pollutant emissions. These screening levels are generally representative of new development on greenfield sites without any form of mitigation measures taken into consideration (BAAQMD 2017b).

The screening criteria for operational criteria pollutant emissions of condo/townhouse developments is 451 DU. For construction-related emissions, the screening criteria is 240 DU.

BAAQMD also provides a preliminary screening methodology to conservatively determine whether a proposed project would exceed carbon monoxide thresholds. A project would result in a less than significant impact related to local carbon monoxide concentrations if it meets the following criteria:

- The project is consistent with an applicable congestion management program established by the county congestion management agency for designated roads or highways, regional transportation plan, and local congestion management agency plans;
- The project traffic would not increase traffic volumes at affected intersections to more than 44,000 vehicles per hour;
- The project traffic would not increase traffic volumes at affected intersections to more than 24,000 vehicles per hour where vertical and/or horizontal mixing is substantially limited (e.g., tunnel, parking garage, bridge underpass, natural or urban street canyon, below-grade roadway).

*a. Would the project conflict with or obstruct implementation of the applicable air quality plan?*

A project would generally conflict with or potentially obstruct implementation of an air quality management plan if it would not support the primary goals of the plan, if it does not include applicable control measures from the plan, or if it would disrupt or hinder implementation of the plan (BAAQMD 2017b). The 2017 Plan includes goals and measures to increase the use of electric vehicles, promote the use of on-site renewable energy, and encourage tree planting. The project includes features that are consistent with these goals and measures, including the provision of bicycle parking, 39 electric vehicle charging spaces, solar-ready buildings, and planting 110 new trees. Further, as discussed in responses to question (b) below, the project not would exceed BAAQMD significance thresholds related to air quality emissions. Therefore, the project would not conflict with or obstruct the implementation of an applicable air quality plan. This impact would be less than significant.

**LESS THAN SIGNIFICANT IMPACT**

*b. Would the project result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard?*

*c. Would the project expose sensitive receptors to substantial pollutant concentrations?*

Project construction would result in temporary construction emissions and long-term operational emissions. Construction activities such as the operation of construction vehicles and equipment over unpaved areas, grading, trenching, and disturbance of stockpiled soils have the potential to generate fugitive dust (PM<sub>10</sub>) through the exposure of soil to wind erosion and dust entrainment. In addition, exhaust emissions associated with heavy-duty construction equipment would potentially

degrade regional air quality. However, the proposed project is below the BAAQMD construction screening criteria for townhomes, as it would develop 39 DU, which is below the 240 DU criteria. Therefore, impacts from construction emissions would be less than significant.

Long-term emissions associated with operational impacts would include emissions from vehicle trips (mobile sources), natural gas and electricity use (energy sources), and landscape maintenance equipment, consumer products, and architectural coating associated with on-site development (area sources). However, the proposed project is below the BAAQMD operational screening criteria for townhomes, as it would develop 39 DU, which is below the 451 DU criteria. Therefore, impacts from operational emissions would be less than significant.

Toxic air contaminants (TAC) are a defined set of air pollutants that may pose a present or potential hazard to human health. Common sources of TACs and PM<sub>2.5</sub> include gasoline stations, dry cleaners, diesel backup generators, truck distribution centers, freeways, and other major roadways (BAAQMD 2017b). The project does not propose construction of gas stations, dry cleaners, highways, roadways, or other sources that could be considered permitted or non-permitted source of TAC or PM<sub>2.5</sub> in proximity to receptors. In addition, the project would result in a net decrease of 72 daily vehicle trips (refer to Section 17, *Transportation*), which is below the BAAQMD-recommended TAC emissions estimate threshold of 10,000 vehicles per day. The project does not contain any other significant sources of TAC emissions. Therefore, the project would not result in a significant source of TAC emissions.

Construction health risks for future residents on the site were calculated by Ramboll using AERMOD, a model developed by the United States Environmental Protection Agency. This model is based on the 2015 *Air Toxics Hot Spots Program Guidance Manual for Preparation of Health Risk Assessments*, published by the California Office of Environmental Health Hazard Assessment. The BAAQMD's HRA Guidelines formally adopted this publication (Appendix AQ). Based on calculations conducted by Ramboll, construction activities would result in a maximum cancer risk of 5.9 in 1 million (below the 10 in 1 million threshold), non-cancer hazard index of 0.01 (below the 1.0 threshold), and maximum PM<sub>2.5</sub> concentration of 0.03 micrograms per cubic meter ( $\mu\text{g}/\text{m}^3$ ) (below the 0.3  $\mu\text{g}/\text{m}^3$  threshold). Therefore, health risk impacts associated with project construction would be less than significant.

Ramboll also estimated cumulative health risk at the project site and determined that the combined impact from all sources would result in a cancer risk of 31 in 1 million (below the 100 in 1 million cumulative threshold), a combined non-hazard index of 0.007 (below the 10.0 cumulative threshold), and a combined maximum PM<sub>2.5</sub> concentration of 0.36  $\mu\text{g}/\text{m}^3$  (below the 0.8  $\mu\text{g}/\text{m}^3$  cumulative threshold). Additionally, because the project is below the BAAQMD screening threshold for townhome developments, the project would not exceed BAAQMD-established thresholds. Therefore, cumulative health risk impacts would be less than significant.

#### **LESS THAN SIGNIFICANT IMPACT**

- d. *Would the project result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?*

Table 3-3 in the BAAQMD's 2017 CEQA Guidelines provides odor screening distances for land uses that have the potential to generate substantial odor complaints. These uses include wastewater treatment plants, landfills or transfer stations, refineries, composting facilities, confined animal facilities, food manufacturing, smelting plants, and chemical plants (BAAQMD 2017b). None of these identified uses would occur within the project site. The proposed project would not generate objectionable odors affecting a substantial number of people during operation.

During construction activities, heavy equipment and vehicles would emit odors associated with vehicle and engine exhaust both during normal use and when idling. However, these odors would be temporary and would cease upon completion. Therefore, the proposed project would not generate objectionable odors affecting a substantial number of people. This impact would be less than significant.

**LESS THAN SIGNIFICANT IMPACT**

*This page intentionally left blank.*

# 4 Biological Resources

	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
Would the project:				
a. Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
b. Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
c. Have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
d. Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
e. Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
f. Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

A Biological Assessment was prepared by Zentner Planning and Ecology (Zentner) in July 2019 for the project and peer reviewed by Rincon Consultants in December 2019. The following analysis incorporates the findings of this report, which has been included as Appendix BIO to this report.

The project site contains five cypress trees (*Hesperocyparis* sp.) along the eastern edge of the parking lot, a juniper hedge (*Juniperus* sp.) between the parking lot and Manor Boulevard to the south, and a nightshade shrub (*Solanum* sp.) at the project site's southeast corner. A narrow strip of dirt surrounds the bowling alley to the east, north, and west. This dirt area is heavily compacted and disturbed with little to no vegetation present. Only common ruderal species (such as bristly ox tongue [*Helminthotheca echioides*], foxtail barley [*Hordeum murinum*], ripgut brome [*Bromus diandrus*], and geranium [*Geranium molle*]) are present in this area. These are the only plants that were observed during Zentner's July 3, 2019 site visit.

Wildlife observed on the project site included bird species using the building and trees for cover, foraging, and possibly nesting; however, no active bird nests were observed, and nesting habitat is limited on the project site. Other urban-adapted wildlife expected to pass through the site include western fence lizard (*Sceloporus occidentalis*), striped skunk (*Mephitis mephitis*), raccoon (*Procyon lotor*) and opossum (*Didelphis virginiana*).

Zentner found no wetlands, waters of the United States, or waters of the State of California on the project site, and noted no hydrophytic vegetation, no hydric soils, no evidence of ponding, and no wetland hydrology (Appendix BIO).

- a. *Would the project have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?*

Located in an urbanized area, the project site is developed and heavily disturbed. Although special-status species have been identified within 5 miles of the project site on the California Natural Diversity Database, no special-status plant or animal species were observed during the site visit. Despite the urbanized nature of the project site, the site does contain potential habitat for nesting raptors and migratory birds and roosting bats. Therefore, mitigation measures would be required to reduce potential impacts to nesting raptors and migratory birds and roosting bats.

## **Mitigation Measures**

### *BIO-1 Nesting Bird Pre-Construction Survey*

If project construction begins between February 1 and September 1 (the migratory bird nesting season), a pre-construction survey shall be conducted by a qualified biologist within 14 days prior to the start of construction, to ensure that no nesting birds or raptors are disrupted by the project. The survey shall include a review of all trees, shrubs, and structures on the property that provide potential nesting habitat for bird or raptor species, including a buffer of 150 feet for passerines and 500 feet for raptors. If an active nest is encountered, the qualified biologist shall establish an appropriate protective buffer around the nest, to ensure that the nest inhabitants do not become distressed. The protective buffer shall remain in place until the nest is no longer active, as determined by the qualified biologist.

*BIO-2 Roosting Bat Pre-construction Survey*

Prior to building demolition, a roosting bat survey shall be completed by a qualified biologist to determine the presence of bat species on the project site. The biologist shall examine all buildings, structures, trees, and shrubs that will be removed during construction and demolition. If any active roosts are present, the qualified biologist shall identify an appropriate construction-free buffer around the active roosts, and no construction shall occur within the construction-free buffer during the maternity season (April 15 to August 15) or during the overwintering season (October 15 to February 28). A qualified biologist shall safely evict roosting bats outside of these seasons.

With implementation of Mitigation Measures BIO-1 and BIO-2, impacts to nesting birds and bat species would be less than significant.

**LESS THAN SIGNIFICANT WITH MITIGATION INCORPORATED**

- b. Would the project have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?*
- c. Would the project have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?*
- d. Would the project interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?*

The project site is located in an urbanized area, and the site is developed and heavily disturbed. The site does not contain any special-status habitats, wetlands, or other waters. Because the site is surrounded by urban development, it does not provide a wildlife movement corridor. There would be no impact to riparian habitat, sensitive natural communities, protected wetlands, or wildlife movement corridors as a result of the project.

**NO IMPACT**

- e. Would the project conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?*
- f. Would the project conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?*

The five existing trees along the eastern project site boundary would be removed as part of the project; however, as shown in Figure 4, approximately 110 new trees would be planted on site. Because none of the existing trees are street trees, the SLMC Chapter 5-2 regarding street tree removal and replanting does not apply to the project. There are no Habitat Conservation Plans or Natural Community Conservation Plans that are applicable to the project site. There would be no impact.

**NO IMPACT**

*This page intentionally left blank.*

## 5 Cultural Resources

	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
Would the project:				
a. Cause a substantial adverse change in the significance of a historical resource pursuant to §15064.5?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b. Cause a substantial adverse change in the significance of an archaeological resource pursuant to §15064.5?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
c. Disturb any human remains, including those interred outside of formal cemeteries?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

This section is based on the findings of a Cultural Resources Memorandum prepared by Rincon Consultants on February 6, 2020 (Appendix CUL).

To identify previous cultural resources work and previously recorded cultural resources and previous conducted studies within a 0.5-mile radius of the project site. Rincon requested a search of the California Historical Resources Information System (CHRIS) at the Northwest Information Center (NWIC) at Sonoma State University on January 3, 2020. The CHRIS records search also included a review of the National Register of Historic Places (NRHP), the California Register of Historical Resources (CRHR), the California Points of Historical Interest list, the California Historical Landmarks list, the Archaeological Determinations of Eligibility list, and the California State Historic Resources Inventory list. A summary of the results of the CHRIS records search is included in Appendix CUL.

As part of the process of identifying cultural resources for this project, Rincon also requested a Sacred Lands File search and a list of Native American tribal organizations and individuals who may have knowledge of sensitive cultural resources in or near the project site from the Native American Heritage Commission. The Commission’s response stated the Sacred Lands File search results were negative for site-specific information and included a list of seven Native American contacts who may have knowledge of cultural resources in the project site and vicinity. Rincon mailed letters to each of the provided contacts requesting information regarding cultural resources. No responses from Native American contacts as of the date of the Cultural Resources Memorandum (February 6, 2020).

Archival research focused on the review of a variety of primary and secondary source materials relating to the history and development of the project site and its surroundings. Sources included, but were not limited to, historic maps and photographs, contemporary newspaper articles, and written histories of the area.

A cultural resources survey of the project site conducted by Rincon Cultural Resource Specialist Hannah Haas, MA, RPA, included a visual inspection of all accessible portions of the project site, examination of exposed ground surface for artifacts and ecofacts, identification of any soil discoloration, visual inspection of ground disturbances, and visual inspection of all built

**903 Manor Boulevard Residential Project**

environment features. Observations were recorded using detailed notes and digital photographs. Resources were recorded and evaluated on California Department Parks and Recreation 523 Series forms, which are included in Appendix CUL.

- a. *Would the project cause a substantial adverse change in the significance of a historical resource pursuant to §15064.5?*

The project site contains one building of 45 or more years of age: Manor Bowl, a 1960 commercial bowling center with a Mid-Century Modern-influenced style. The property is located in the Washington Manor neighborhood of San Leandro. As recently as 1958, the project site was occupied by the Old Farm Nursery, a commercial nursery. By August 1959, Old Farm Nursery had closed, and plans were made for the construction of Manor Bowl. Manor Bowl's January 1960 opening coincided with the popularity of multi-use bowling centers in suburban America (Appendix CUL).

Manor Bowl's multi-use amenities reflected a "country club of the people" approach to bowling center design (Appendix CUL). Features of the property made it a site of both nighttime entertainment and community engagement. Aside from bowling lanes, the property offered a bar, coffee shop, meeting rooms, and a "kiddie nursery" (*Oakland Tribune* 8/6/1959; 1/5/1960). While Manor Bowl's multi-use character was typical of the postwar bowling center property type, its design lacked the architectural flair of other bowling centers. Manor Bowl displays a few architectural elements typical of the Mid-Century Modern architectural style. These include a horizontal emphasis, low-slung roof, stack-bond brick cladding, and pattern block screens. The building has few other distinguishing architectural features of the Mid-Century Modern architectural style (GEI 2017).

## **Evaluation**

Manor Bowl is recommended ineligible for listing on the NRHP or CRHR, or for local designation as a City Landmark or Merit Resource under any eligibility criteria (Appendix CUL). The property was constructed as Manor Bowl in 1960, during the suburban expansion of San Leandro and amid the booming popularity of multi-use bowling centers in postwar America. Research for this study did not suggest the property played an important role in either event or that it was important in any events significant to the history of the city, region, state, or nation. As a result, the property is recommended ineligible for listing in the NRHP or CRHR under Criteria A/1 or for local designation as a City Landmark of Structure of Merit under Criteria A/A.

The individual mostly closely associated with Manor Bowl is Dudley Knapp, a founder of Manor Enterprises and its first president. Neither Knapp nor any other individual associated with Manor Bowl made singular historical contributions to local, regional, state, or national history (Appendix CUL). The property is therefore recommended ineligible for listing in the NRHP or CRHR under Criteria B/2 or for local designation as a City Landmark of Structure of Merit under Criteria B/B.

Architecturally, the property is an undistinguished bowling center with modest Mid-Century Modern-style architectural elements. Generally utilitarian in design, it lacks any distinguishing architectural features and is a common example of a Mid-Century Modern-era bowling alley. Because it does not embody the distinctive characteristics of a type, period, or method of construction, represent the work of a master, or possess high artistic values, it is recommended ineligible for listing in the NRHP and CRHR under Criteria C/3 or for local designation as a City Landmark of Structure of Merit under Criteria C/C or D/D.

A review of available evidence and records search results did not indicate the property may yield important information about prehistory or history. As such, it is recommended ineligible for listing for the NRHP and CRHR under Criteria D/D or for local designation as a City Landmark of Structure of Merit under Criteria E/E.

Finally, the property is not recommended eligible for listing as a contributor to any existing or potential historic district.

## **Conclusions**

Manor Bowl is recommended ineligible for listing in the NRHP or CRHR or for designation as City of San Leandro City Landmark or Structure of Merit. As such, it does not qualify as a historical resource and its demolition would not result in a significant adverse impact as defined by CEQA. Further, the CHRIS records search and a review of City of San Leandro historic resources listings failed to identify any other cultural resources, including historic districts, close to the project site.

### **LESS THAN SIGNIFICANT IMPACT**

- b. Would the project cause a substantial adverse change in the significance of an archaeological resource pursuant to §15064.5?*

The records search, Sacred Lands File search, Native American scoping, and pedestrian survey did not identify any archaeological resources on the project site (Appendix CUL). The entire project site is developed, and ground visibility was obscured by buildings or non-native ornamental vegetation or was inaccessible. No archaeological resources are known to exist in the project vicinity and Rincon did not identify any information to suggest that the project area may be sensitive for archaeological resources. However, there is always the potential for previously unknown archaeological resources to be discovered during construction activities. Therefore, Mitigation Measure CUL-1 would be required to reduce impacts.

## **Mitigation Measure**

### *CUL-1 Unanticipated Discovery of Archaeological Resources*

If cultural resources are encountered during ground-disturbing activities, work within 50 feet of the find shall be halted, and an archaeologist meeting the Secretary of the Interior's Professional Qualifications Standards for archaeology (National Park Service 1983) shall be contacted immediately to evaluate the find. If the discovery proves to be significant under CEQA, additional work such as data recovery excavation, Native American consultation, and archaeological monitoring may be warranted to mitigate any significant impacts.

With implementation of Mitigation Measure CUL-1, impacts to archeological resources would be less than significant.

### **LESS THAN SIGNIFICANT WITH MITIGATION INCORPORATED**

- c. Would the project disturb any human remains, including those interred outside of formal cemeteries?*

While no known human remains are present on the project site, the project is required to adhere to regulations regarding the unanticipated discovery of human remains, as follows. If human remains are found, existing regulations outlined in the State of California Health and Safety Code Section 7050.5 state that no further disturbance shall occur until the County Coroner has made a

**903 Manor Boulevard Residential Project**

determination of origin and disposition pursuant to Public Resources Code Section 5097.98. In the event of an unanticipated discovery of human remains, the County Coroner must be notified immediately. If the human remains are determined to be prehistoric, the Coroner will notify the Native American Heritage Commission, which will determine and notify a most likely descendant. The most likely descendant shall complete the inspection of the site within 48 hours of being granted access and provide recommendations as to the treatment of the remains to the landowner.

Therefore, the project would be required to comply with regulations regarding discovered human remains. This would ensure the project would have a less than significant impact on human remains.

**LESS THAN SIGNIFICANT IMPACT**

# 6 Energy

	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
Would the project:				
a. Result in a potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b. Conflict with or obstruct a state or local plan for renewable energy or energy efficiency?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Energy consumption accounts for energy consumed during project construction and operation, such as fuel consumed by vehicles, natural gas consumed for heating and/or power, and electricity consumed for power. The analysis of energy consumption herein involves the quantification of anticipated vehicle and equipment fuel, natural gas, and electricity consumption during project construction and operation, to the extent feasible, as well as a qualitative discussion of the efficiency, necessity, and potential for wastefulness of that energy consumption.

a. *Would the project result in a potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?*

The proposed project would involve the use of energy during construction and operation. Energy use during construction would be primarily from fuel consumption to operate heavy equipment, light-duty vehicles, machinery, and generators. Temporary grid power may be provided to construction trailers or electric construction equipment. Table 3 illustrates the anticipated energy consumption from construction equipment and vehicles, including construction worker trips to and from the project site. Project construction would require approximately 3,021 gallons of gasoline and 32,467 gallons of diesel fuel. Table 3 also provides the anticipated annual operational energy consumption from vehicles.

**Table 3 Project Construction and Operation Energy Use**

Source	Fuel Consumption (Gallons)	
	Gasoline	Diesel
Construction Equipment and Hauling Trips	N/A	32,467
Construction Worker Vehicle Trips	3,021	N/A
Operational Vehicle Trips (Annual)	21,803	6,677

N/A: Not applicable

Sources: Appendix AQ for CalEEMod default values for fleet mix and average distance of travel; Appendix NRG for energy calculation sheets.

Project construction would be required to comply with the SLMC, which incorporates the California Green Building Standards Code. This code includes specific requirements related to recycling, construction materials, and energy efficiency standards that would apply to project construction to minimize wasteful, inefficient, and unnecessary energy consumption.

In addition to transportation energy use, project operation would require permanent grid connections for electricity and natural gas. Approximately 665 million British thermal units per year (MMBtu/yr) of electricity would be used for lighting and large appliances within the residential units. Approximately 886 MMBtu/yr of natural gas would be used primarily for heating the proposed buildings. The proposed residential buildings would total approximately 74,624 square feet, which is an average energy use intensity (EUI) of 0.0208 MMBtu per square foot. According to the United States Energy Information Administration, average EUI for residences in the Pacific region of the United States is 0.0314 MMBtu per square foot (United States Energy Information Administration 2018a; United States Energy Information Administration 2018b). Therefore, the project's EUI for residential buildings would be below the average EUI in the Pacific region; project operation would not result in significant impacts due to the wasteful, inefficient, or unnecessary consumption of energy, and impacts would be less than significant.

In accordance with Section 150.1(b)14 of the 2019 Building Energy Efficiency Standards, the project would be required to be solar-ready or include the installation of photovoltaic systems on all low-rise residential buildings (up to three stories), equal to the expected electricity usage. The project identifies potential locations for solar panels on the rooftops of each proposed building. Therefore, this requirement would serve to reduce the project's consumption of nonrenewable energy resources.

Due to the large number of materials and manufacturers involved in the production of construction materials, including manufacturers in other states and countries, upstream energy use cannot be estimated reasonably or accurately. However, it is reasonable to assume that manufacturers of building materials such as concrete, steel, lumber, or other building materials would employ energy conservation practices in the interest of minimizing the cost of doing business.

Overall, project operation would result in consumption of fuels from vehicle trips, and electricity and natural gas from proposed buildings. Project energy consumed would represent an incremental increase in energy usage compared to existing conditions, and the proposed project would implement energy-efficient components to reduce energy demand. Therefore, impacts would be less than significant.

#### **LESS THAN SIGNIFICANT IMPACT**

*b. Would the project conflict with or obstruct a state or local plan for renewable energy or energy efficiency?*

Table 4 provides San Leandro 2035 General Plan energy efficiency goals and policies and summarizes the project's compliance with these policies.

**Table 4 Project Compliance with Energy Efficiency Goals and Policies**

Energy Efficiency Goal or Policy	Project Consistency
<p><b>Policy OSC-7.1: Recycling.</b> Actively promote recycling, composting, and other programs that reduce the amount of solid waste requiring disposal in landfills.</p>	<p><b>Consistent.</b> The project would be served by Waste Management of Alameda County for garbage collection, recycling, and composting services (Appendix WM). The provision of these services to the proposed townhomes would encourage recycling and composting of typical household waste.</p>
<p><b>Policy OSC-7.3: Drought-Tolerant Landscaping.</b> Encourage the use of native vegetation and Bay-friendly landscaping and enforce the State Department of Water Resources Model Water Efficient Landscape Ordinance (WELO).</p>	<p><b>Consistent.</b> As described in the landscape plan, proposed landscaping would require less water than the maximum applied water allowance, per Water Efficient Landscape Ordinance requirements.</p>
<p><b>Policy OSC-7.4: Development Standards.</b> Maintain local planning and building standards that require the efficient use of water through such measures as low-flow plumbing fixtures and water-saving appliances. Require water conservation measures as a condition of approval for major developments.</p>	<p><b>Consistent.</b> The project would be required to comply with the SLMC, which incorporates the California Green Building Standards Code. Measures such as low-flow plumbing fixtures and water-saving appliances are included in the California Green Building Standards Code.</p>
<p><b>Policy OSC-7.8: Green Building.</b> Promote green building in new construction and remodels.</p>	<p><b>Consistent.</b> The project would be required to comply with the SLMC, which incorporates the California Green Building Standards Code.</p>
<p><b>Policy OSC-7.9: Reducing Greenhouse Gases Through Land Use and Transportation Choices.</b> Locate and design new development in a manner which maximizes the ability to use transit, walk, or bicycle for most trips, reduce dependence on fossil fuel powered vehicles, and reduce vehicle miles travelled.</p>	<p><b>Consistent.</b> As described in Section 17, <i>Transportation</i>, the project would result in fewer vehicle trips than the existing uses and thus would reduce vehicle miles travelled (VMT).</p>
<p><b>Policy OSC-8.2: Planning and Building Practices.</b> Encourage construction, landscaping, and site planning practices that minimize heating and cooling costs and ensure that energy is efficiently used. Local building codes and other City regulations and procedures should meet or exceed state and federal standards for energy conservation and efficiency and support the City's greenhouse gas reduction goals.</p>	<p><b>Consistent.</b> The planting of trees adjacent to proposed buildings would shade the buildings, resulting in lower heating and cooling requirements as the trees provide a measure of insulation.</p>

As shown in Table 4, the project would be compliant with applicable energy efficiency goals and policies. Therefore, potential impacts associated with renewable energy and energy efficiency would be less than significant.

**LESS THAN SIGNIFICANT IMPACT**

# 7 Geology and Soils

	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
Would the project:				
a. Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving:				
1. Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
2. Strong seismic ground shaking?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
3. Seismic-related ground failure, including liquefaction?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
4. Landslides?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b. Result in substantial soil erosion or the loss of topsoil?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
c. Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction, or collapse?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
d. Be located on expansive soil, as defined in Table 1-B of the Uniform Building Code (1994), creating substantial direct or indirect risks to life or property?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
e. Have soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of wastewater?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
f. Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

A Preliminary Feasibility Evaluation was prepared by Quantum Geotechnical, Inc. in September of 2018 for the project. The following analysis incorporates the findings of this report, which has been included as Appendix GEO to this report. Additionally, a letter dated November 5, 2019, from Quantum Geotechnical, Inc. indicates that the project plans were updated to incorporate recommendations from the 2018 report.

The City of San Leandro is located in the United States Geological Survey's San Leandro and Hayward Quadrangle 7.5-minute topographic map. The area is typified by low topographic relief, with gentle slopes to the southwest in the direction of San Francisco Bay. By contrast, the San Leandro Hills, directly northeast of the city, have more pronounced topographic relief, with elevations that locally approach 1,000 feet above mean sea level (City of San Leandro 2016a). According to the U.S. Department of Agriculture Soil Survey, soils on the project site consist of Danville silty clay loam (United States Department of Agriculture 2019).

*a.1. Would the project directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault?*

As with any site in the Bay Area region, the project site is susceptible to strong seismic ground shaking in the event of a major earthquake. The project site is not located in an Alquist-Priolo Earthquake Fault Zone and there are no known faults crossing or projecting toward the site (California Geological Survey 2003). The closest active fault to the project site is the Hayward Fault located approximately 2 miles to the northeast. This fault is capable of producing strong seismic ground shaking at the project site. The proposed project would be required to comply with State of California standards for building design through the CBC (California Code of Regulations, Title 24), which requires various measures of all construction in California to account for hazards from seismic shaking. Therefore, the proposed project would not directly or indirectly cause substantial adverse impacts associated with surface fault rupture. Impacts would be less than significant.

#### **LESS THAN SIGNIFICANT IMPACT**

*a.2. Would the project directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving strong seismic ground shaking?*

*c. Would the project be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction, or collapse?*

The San Francisco Bay Area region is one of the most seismically active areas in the country. While seismologists cannot predict earthquake events, the Third Uniform California Earthquake Rupture Forecast estimates the likelihood that California will experience a magnitude 8 or larger earthquake in the next 30 years is about 7.0 percent (Southern California Earthquake Center 2017). The estimated rate of earthquakes of magnitude 6.7 has gone down by 30 percent, with the expected frequency decreased to once every 6.3 years. This decreased likelihood of magnitude 6.7 earthquakes is balanced by an increased likelihood of magnitude 8 earthquakes.

The project site is located in an area of relatively high seismic potential. The faults in the area are capable of generating earthquakes that could produce strong to violent ground shaking at the project site. The active fault nearest the site is the Hayward fault, which is located approximately 2 miles to the northeast. The effects of earthquake-related ground shaking could include damage to

structures, as well as damage to streets and utilities. However, compliance with the current CBC requirements would ensure that the proposed structures would be able to: (1) resist minor earthquakes without damage; (2) resist moderate earthquakes without structural damage, but with some non-structural damage; and (3) resist major earthquakes without collapse, but with some structural as well as nonstructural damage. By adhering to State and City building code requirements, the direct or indirect impacts from development of the proposed project as they relate to strong seismic ground shaking would be less than significant.

According to the Geotechnical Feasibility Evaluation, the project site has a high liquefaction potential (Appendix GEO). The factors known to influence liquefaction potential include grain size, relative density, groundwater conditions, effective confining pressures, and intensity and duration of ground shaking. Loose, saturated, near-surface, cohesionless soils exhibit the highest liquefaction potential, while dense, cohesionless soils and cohesive soils exhibit low to negligible liquefaction potential. However, Appendix GEO found that the deep soil boring did not encounter layers of loose sandy soil below the groundwater table and concluded that the potential for liquefaction is minimal.

Lateral spreading and earthquake-induced landslides involve lateral ground movements caused by seismic shaking. These lateral ground movements are often associated with a weakening or failure of an embankment or soil mass overlying a layer of liquefied sands or weak soils. Due to the relatively flat site topography and lack of liquefiable material (Appendix GEO), lateral spreading is unlikely at the site. Therefore, impacts related to strong seismic shaking and seismic related ground failure would be less than significant.

**LESS THAN SIGNIFICANT IMPACT**

*a.3. Would the project directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving seismic-related ground failure, including liquefaction?*

As described under question (c), above, the project site has a high liquefaction potential (Appendix GEO) but is not considered susceptible to liquefaction as the deep soil boring did not encounter liquefiable soils below the groundwater table (Appendix GEO). Therefore, impacts from ground failure involving liquefaction would be less than significant.

**LESS THAN SIGNIFICANT IMPACT**

*a.4. Would the project directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving landslides?*

The project site and surroundings are generally level, and no steep slopes are located near the site. Therefore, there is no potential for landslides at the site. Impacts from landslides would be less than significant.

**LESS THAN SIGNIFICANT IMPACT**

*b. Would the project result in substantial soil erosion or the loss of topsoil?*

The project site is developed and generally level, which limits the potential for substantial soil erosion. Soils are exposed to the highest potential for erosion during the grading and excavation phases of construction. Project-related ground-disturbing activities would include excavation and grading for foundations, building pads, access roads, and utility trenches. Temporary erosion could occur during project construction. The project would be required to comply with SLMC Chapter 7-12 which requires all land-disturbing activities be undertaken in a manner designed to minimize erosion

and loss of topsoil. This includes dust suppression, spill prevention, drainage maintenance, and prevention of flooding or material deposition onto adjacent sites.

Implementation of site-specific best management practices, including those listed above, and compliance with SLMC Chapter 7-12 would ensure that project impacts associated with soil erosion and the loss of topsoil would be less than significant.

**LESS THAN SIGNIFICANT IMPACT**

- d. *Would the project be located on expansive soil, as defined in Table 1-B of the Uniform Building Code (1994), creating substantial direct or indirect risks to life or property?*

Expansive soils are soils that, due to their composition and moisture content, have a potential to undergo significant changes in volume, in the form of either shrinking or swelling. Periodic shrinking and swelling of expansive soils can cause extensive damage to buildings, structures, and roads. The project site contains highly expansive clay soils near the surface (Appendix GEO). However, compliance with California Building Code regulations and appropriately designed foundations, flatwork, and pavements would minimize potential project impacts associated with expansive soils. This includes foundational designs that prevent uplift of the supported structure and resist forces exerted on the foundation due to soil volume changes (refer to Section 1808.6.1 of the California Building Code). This requirement can be met by a post-tensioned slab foundation designed to tolerate expansive soil movements (Appendix GEO). The proposed project would be required to comply with State of California standards for foundation design through the California Building Code (California Code of Regulations, Title 24). Therefore, impacts would be less than significant.

**LESS THAN SIGNIFICANT IMPACT**

- e. *Would the project have soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of wastewater?*

The San Leandro municipal sewer system serves the project site currently and would continue to do so with project implementation. An existing public sewer main is located in the Norton Street right-of-way, approximately 120 feet from the project site. The project would involve an extension of this existing sewer line along Manor Boulevard to serve the project. The project would not require the use of septic tanks, or the use of alternative wastewater disposal systems. There would be no impact.

**NO IMPACT**

- f. *Would the project directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?*

The project would involve demolition of the existing building and paved parking lot, and limited excavation to accommodate new building foundations and utility connections. According to geologic mapping by Graymer (2000), the project area is mapped as Holocene-age natural levee deposits (Qh1), with additional Holocene-age alluvial and basin deposits mapped at the surface within the project's vicinity. Surficial Holocene-age deposits that are less than 5,000 years old are too young to contain paleontological resources (Society of Vertebrate Paleontology [SVP] 2010), and are thus assigned a low paleontological sensitivity as defined by SVP (SVP 2010). However, late Holocene deposits may grade into middle and early Holocene or Pleistocene-age deposits (i.e., deposits older than 5,000 years) at unknown depths within the project area. Middle and early Holocene and

Pleistocene-age deposits have yielded numerous scientifically significant paleontological resources throughout California, including within Alameda County (Agenbroad 2003; Bell et al. 2004; Jefferson 1985, 2010; Maguire and Holroyd 2016; Merriam 1911; Paleobiology Database 2020; Reynolds et al. 1991; Savage 1951; Savage et al. 1954; Scott and Cox 2008; Springer et al. 2009; Tomiya et al. 2011; Wilkerson et al. 2011; Winters 1954; University of California Museum of Paleontology [UCMP] 2020). The UCMP online fossil locality database contains records of a diverse assemblage of Pleistocene-age vertebrate fauna from Alameda County including: saber-toothed cat, lion, wolf, fox, short-faced bear, badger, sea otter, mammoth, mastodon, ground sloth, horse, tapir, peccary, ox, bison, antelope, deer, camel, llama, rabbit, rodent, shrew, mole, bird, lizard, snake, turtle, frog, toad, salamander, fish, gastropod, bivalve, and plant fossils (UCMP 2020). Middle to early Holocene and Pleistocene-age deposits are generally assigned a high paleontological sensitivity because of the extensive fossil record throughout California.

The depth to middle to early Holocene and Pleistocene-age deposits within the project area is uncertain but is likely greater than 3 feet below ground surface based on the moderate distance between the project site and the basin's margins to the northeast. Additionally, the geotechnical analysis determined that the project site is variably capped with artificial fill in portions of the project site to depths of approximately 3 feet (or more) below ground surface, with native surficial deposits present immediately below the surface elsewhere in the project site (Quantum Geotechnical, Inc. 2018).

Grading for the project is anticipated to be limited to the uppermost 2 to 3 feet of sediments through mostly artificial fill and late Holocene-age surficial deposits. Excavated material would consist primarily of soils disturbed during original site preparation for and construction of the existing building. The project area has a low paleontological sensitivity at these depths and impacts to paleontological resources are therefore not expected, but the potential exists for previously unidentified paleontological resources to be discovered during excavation if ground disturbances impact middle to early Holocene and Pleistocene-age deposits at depths greater than 3 feet below ground surface. Mitigation Measure GEO-1 would reduce impacts to less than significant levels.

## **Mitigation Measures**

### *GEO-1 Unanticipated Discovery of Paleontological Resources*

In the event an unanticipated fossil discovery is made during the course of project development, then in accordance with SVP (2010) guidelines, it is the responsibility of any worker who observes fossils within the project site to stop work within 50 feet of the find and notify a qualified professional paleontologist who shall be retained to evaluate the discovery, determine its significance and if additional mitigation or treatment is warranted. Work in the area of the discovery will resume once the find is properly documented and authorization is given to resume construction work. Any significant paleontological resources found during construction monitoring will be prepared, identified, analyzed, and permanently curated in an approved regional museum repository.

Implementation of Mitigation Measure GEO-1 would reduce impacts to paleontological resources to less than significant levels.

### **LESS THAN SIGNIFICANT WITH MITIGATION INCORPORATED**

*This page intentionally left blank.*

## 8 Greenhouse Gas Emissions

	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
Would the project:				
a. Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b. Conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of greenhouse gases?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

An Air Quality and Health Risk Assessment Memorandum was prepared by Ramboll on July 30, 2019 for the project and peer reviewed by Rincon Consultants in January 2020. The following analysis incorporates the findings of this memorandum, which has been included as Appendix AQ to this report.

### Setting

Project implementation would generate GHG emissions through the burning of fossil fuels or other emissions of GHGs, thus potentially contributing to cumulative impacts related to climate change. In response to an increase in man-made GHG concentrations over the past 150 years, California has implemented Assembly Bill 32 (AB 32), the “California Global Warming Solutions Act of 2006.” AB 32 codifies the statewide goal of reducing emissions to 1990 levels by 2020 (essentially a 15 percent reduction below 2005 emission levels) and the adoption of regulations to require reporting and verification of statewide GHG emissions. Furthermore, on September 8, 2016, the governor signed Senate Bill 32 into law, which requires the state to further reduce GHGs to 40 percent below 1990 levels by 2030. Senate Bill 32 extends AB 32, directing the California Air Resources Board to ensure that GHGs are reduced to 40 percent below the 1990 level by 2030.

On December 14, 2017, the California Air Resources Board adopted the 2017 Scoping Plan, which provides a framework for achieving the 2030 target. The 2017 Scoping Plan does not provide project-level thresholds for land use development. Instead, it recommends that local governments adopt policies and locally-appropriate quantitative thresholds consistent with a statewide per capita goal of six metric tons of carbon dioxide equivalent (CO<sub>2</sub>e) by 2030 and two metric tons CO<sub>2</sub>e by 2050 (California Air Resources Board 2017). As stated in the 2017 Scoping Plan, these goals may be appropriate for plan-level analyses (city, county, subregional, or regional), but not for specific individual projects because they include all emissions sectors in the state.

Most individual projects do not generate sufficient GHG emissions to directly influence climate change. However, physical changes caused by a project can contribute incrementally to cumulative effects that are significant, even if individual changes resulting from a project are limited. The issue of climate change typically involves an analysis of whether a project’s contribution towards an

impact would be cumulatively considerable. “Cumulatively considerable” means that the incremental effects of an individual project are significant when viewed in connection with the effects of past projects, other current projects, and probable future projects (CEQA Guidelines, Section 15064[h][1]).

### **San Leandro Climate Action Plan**

The City of San Leandro’s Climate Action Plan (CAP) is based on the Local Governments for Sustainability 5-Milestone process, which include establishing an inventory of citywide GHG emissions, setting reduction targets and goals, establishing and implementing a CAP, and monitoring and evaluating progress. The vision of the CAP is to guide San Leandro towards a sustainable future that reduces GHG emissions from current levels, while promoting economic prosperity for present and future generations. The CAP documents the programs San Leandro has created since 2005 and considers new programs and actions that may be implemented to meet the City’s GHG reduction target of 25 percent below 2005 emissions levels by 2020 (City of San Leandro 2009).

### **Screening Criteria**

In the 2017 BAAQMD CEQA Air Quality Guidelines, the BAAQMD outlines an approach to determine the significance of projects. The BAAQMD recommends that lead agencies determine appropriate GHG emissions thresholds of significance based on substantial evidence in the record. The BAAQMD’s significance thresholds in the updated May 2017 CEQA Guidelines for project operations within the SFBAAB are the most appropriate thresholds for use in determining GHG emission impacts of the proposed project. The BAAQMD developed screening criteria to provide lead agencies and project applicants with a conservative indication of whether a project could result in potentially significant GHG emission impacts. If all screening criteria are met by a project, then the lead agency or applicant would not need to perform a detailed assessment of their project’s GHG emissions. These screening levels are generally representative of new development on greenfield sites without any form of mitigation measures taken into consideration (BAAQMD 2017b).

The screening criteria for GHG emissions of condo/townhome developments is 78 DU. Therefore, for the purpose of this analysis, it was assumed that the project would result in a less than significant impact and would not require additional analysis if it would involve the addition of fewer than 78 DU.

- a. *Would the project generate GHG emissions, either directly or indirectly, that may have a significant impact on the environment?*

Project construction would generate temporary short-term GHG emissions through travel to and from the worksite and from the operation of construction equipment such as graders, backhoes, and generators. Site preparation and grading typically generate the greatest amount of emissions due to the use of grading equipment and soil hauling. Construction of the project would result in 39 new dwelling units, which is below the BAAQMD screening criteria of 78 DU for GHG emissions. Nonetheless, the project applicant would be required to comply with all BAAQMD rules and regulations regarding emission control measures. Impacts related to GHG emissions would be less than significant.

### **LESS THAN SIGNIFICANT IMPACT**

- b. *Would the project conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of greenhouse gases?*

Table 5 evaluates the project’s consistency with the applicable GHG reduction measures outlined in the CAP and shows the proposed project would be consistent with those measures. The CAP includes specific goals and policies to meet estimated reductions for compliance with state GHG reduction goals, and the project would comply with these goals and polices.

**Table 5 Project Consistency with the San Leandro Climate Action Plan**

San Leandro CAP Goal	Project Consistency
<b>Goal 3.3:</b> Increase residential, commercial, and industrial renewable energy use	<b>Consistent.</b> Per the California Energy Commission (CEC) <i>2019 Building Energy Efficiency Standards for Residential and Nonresidential Buildings</i> (CEC 2018), new residential buildings are required to be solar ready, effective January 1, 2020. The project would comply with this requirement.
<b>Goal 3.4:</b> Promote green building practices in both the new construction and remodel market	<b>Consistent.</b> The project would be required to comply with the SLMC, which incorporates the California Green Building Standards Code. Specifically, the project would be required to include measures such as low-flow plumbing fixtures and water-saving appliances.
<b>Goal 4.1:</b> Encourage development which promotes walkable communities  <b>Goal 4.3:</b> Promote and accommodate alternative, environmentally friendly methods of transportation, such as walking and bicycling	<b>Consistent.</b> The site is located approximately 0.28 mile east of AC Transit Route 34 bus stops, and Manor Boulevard is bordered by pedestrian sidewalks. A Class III bike route is proposed along Manor Boulevard in the City of San Leandro General Plan. The project includes four bicycle parking lockers located throughout the site. Project residents would have a variety of transportation options.
<b>Goal 4.5:</b> Encourage the use of fuel-efficient vehicles, low carbon fuels and more efficient traffic operations	<b>Consistent.</b> The project includes three EV surface parking spaces, as well as 39 garage EV parking spaces.
<b>Goal 4.6:</b> Increase and enhance urban green space	<b>Consistent.</b> The project includes landscaping, such as the planting of trees and shrubs, within the project site along site boundaries and near proposed buildings, which would enhance the on-site green space. The proposed project includes approximately 8,387 square feet of open space, 3,493 square feet of which would be private and 4,894 square feet of which would be publicly accessible. Private open space includes the proposed deck areas of each unit, which vary in size between 77 and 100 square feet per unit. Publicly accessible open spaces would be located along the northern site boundary, the southern half of the western site boundary, and in the eastern-central portion of the site where the concrete patio would be located (refer to Figure 4).
<b>Goal 5.1:</b> Increase recycling and composting in the residential sector  <b>Goal 5.3:</b> Promote waste reduction and material re-use in the community	<b>Consistent.</b> The project would be served by Waste Management of Alameda County for garbage collection, recycling, and composting services. The provision of these services to the proposed townhomes would encourage recycling and composting of typical household waste.

Source: City of San Leandro 2009

The project would be required to comply with the SLMC, which incorporates the California Green Building Standards Code. This code includes specific requirements related to recycling, construction materials, and energy efficiency standards that would apply to project construction to minimize wasteful, inefficient, and unnecessary energy consumption.

**903 Manor Boulevard Residential Project**

The project would also comply with the City's 2035 General Plan goals and policies. For example, it would comply with Goal OSC-7 by providing recycling services to the future residents, reducing landscaping water demand by planting plants with low water requirements, and installing low-flow fixtures and water-saving appliances; and Goals T-1 and T-3 by providing access to alternate modes of transportation, including transit, bicycling, and pedestrian facilities.

Therefore, the proposed project would not conflict with state regulations intended to reduce GHG emissions statewide and would be consistent with applicable GHG reduction plans. Impacts related to GHG emissions would be less than significant.

**LESS THAN SIGNIFICANT IMPACT**

# 9 Hazards and Hazardous Materials

	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
--	--------------------------------	--	------------------------------	-----------

Would the project:

a. Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b. Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
c. Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within 0.25 mile of an existing or proposed school?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
d. Be located on a site that is included on a list of hazardous material sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
e. For a project located in an airport land use plan or, where such a plan has not been adopted, within 2 miles of a public airport or public use airport, would the project result in a safety hazard or excessive noise for people residing or working in the project area?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
f. Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
g. Expose people or structures, either directly or indirectly, to a significant risk of loss, injury, or death involving wildland fires?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

**903 Manor Boulevard Residential Project**

A Phase 1 Environmental Site Assessment was prepared by Tetra Tech, Inc. on September 25, 2019 for the project and peer reviewed by Rincon Consultants in January 2020. The following analysis incorporates the findings of this report, which has been included as Appendix HAZ. Appendix HAZ contains a search of federal, state, and local regulatory databases. This search revealed ten sites (including two historic dry cleaners, six asbestos-disposal sites, one leaking underground storage tank, and one waste and oil disposal site) within 1,250 feet of the project site, none of which included recognized environmental conditions.

- a. *Would the project create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?*
- b. *Would the project create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?*

**Construction**

Project construction may include the temporary transport, storage, and use of potentially hazardous materials including fuels, lubricating fluids, cleaners, or solvents. As the proposed project may involve the disturbance of soil, grading and excavation could also result in the upset of hazardous materials at the site. Furthermore, demolishing the existing building could result in upset and release of hazardous materials into the environment.

Project construction would require heavy construction equipment, the operation of which could result in a spill or accidental release of hazardous materials, including fuel, engine oil, engine coolant, and lubricants. Project construction would also include temporary transport, storage, and use of potentially hazardous materials including cleaners and solvents. The transport of any hazardous materials would be subject to federal, state, and local regulations, which would minimize risks associated with the transport hazardous materials. Construction activities that involve hazardous materials would be required to transport such materials along roadways designated for that purpose in the City and County, thereby limiting risk of upset during transportation. Additionally, spills would be addressed by existing laws and regulations regarding cleanup and abatement procedures.

As described in Appendix HAZ, the project site may have been used previously for agricultural operations indicating potential for residual agricultural chemicals in the soil; however, there is no evidence of misuse, dumping, or improper storage of chemicals from this previous use. The project site is not included on a list of hazardous materials compiled pursuant to Government Code Section 65962.5, such as the State Water Resources Control Board’s GeoTracker database; the United States Environmental Protection Agency’s Resource Conservation and Recovery Act facilities list, Integrated Compliance Information System database, National Pollutant Discharge Elimination System permit program, and Comprehensive Environmental Response, Compensation, and Liability Information System (Superfund site) database; or the California Department of Toxic Substances Control (DTSC) EnviroStor database. Therefore, ground-disturbing activities are not anticipated to expose construction workers to soil contaminated with agricultural chemicals above environmental safety limits.

The existing building was constructed prior to 1970, and as such may contain asbestos-containing material (ACM), polychlorinated biphenyls (PCB), and/or lead-based paint (LBP). Because the building was constructed before the federal ban on PCBs, it is possible that PCBs are present in light ballasts. Demolition could result in health hazard impacts to workers if not remediated prior to

construction activities. However, demolition and construction would be required to comply with BAAQMD Regulation 11, Rule 2, which governs the proper handling and disposal of ACM for demolition, renovation, and manufacturing activities in the Bay Area. These activities would also need to comply with California Occupational Safety and Health Administration (CalOSHA) regulations regarding lead-based materials. The California Code of Regulations, Section 1532.1, requires testing, monitoring, containment, and disposal of lead-based materials such that exposure levels do not exceed CalOSHA standards. The DTSC has classified PCBs as a hazardous waste when concentrations exceed 50 parts per million in non-liquids; consequently, the DTSC requires that materials containing those concentrations of PCBs be transported and disposed of as hazardous waste. Any light ballast removed would be evaluated for the presence of PCBs and managed appropriately. Compliance with BAAQMD, CalOSHA, and DTSC policies regarding ACM, LBP, and PCBs, would reduce impacts to a less than significant level.

## **Operation**

Residential uses such as those proposed typically do not use or store large quantities of hazardous materials other than those typically used for household cleaning, maintenance, and landscaping. Therefore, the proposed project would not involve the use, storage, transportation, or disposal of hazardous materials in significant quantities. Impacts would be less than significant.

### **LESS THAN SIGNIFICANT IMPACT**

- c. *Would the project emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within 0.25 mile of an existing or proposed school?*

Washington Manor Middle School is located approximately 0.2 mile southwest of the project site at 1170 Fargo Avenue. Construction activities may involve the use, storage, or transport of hazardous material, but the transport, use, storage, and disposal of hazardous materials associated with construction are subject to applicable federal, state, and local regulations to minimize the release of hazardous materials into the environment. Furthermore, implementation of rules regarding the proper handling of ACM and LBP, as discussed under questions (a) and (b) above, would ensure emissions of ACM or LBP particles do not affect nearby schools during demolition activities.

Project operation would not involve the handling of hazardous materials, substances, or wastes other than those typically used for household cleaning, maintenance, and landscaping. Handling of hazardous materials is subject to applicable federal, state, and local regulations to reduce emissions of hazardous materials into the environment. Therefore, through adherence to applicable regulations, impacts would be less than significant.

### **LESS THAN SIGNIFICANT IMPACT**

- d. *Would the project be located on a site that is included on a list of hazardous material sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?*

As discussed in Appendix HAZ, the project site is not included on a list of hazardous materials compiled pursuant to Government Code Section 65962.5, such as the State Water Resources Control Board's GeoTracker database; the United States Environmental Protection Agency's Resource Conservation and Recovery Act facilities list, Integrated Compliance Information System database, National Pollutant Discharge Elimination System permit program, and Comprehensive

Environmental Response, Compensation, and Liability Information System (Superfund site) database; or the DTSC EnviroStor database. No impact would occur.

**NO IMPACT**

- e. *For a project located within an airport land use plan or, where such a plan has not been adopted, within 2 miles of a public airport or public use airport, would the project result in a safety hazard or excessive noise for people residing or working in the project area?*

The project site is approximately 4.1 miles from the Oakland International Airport and approximately 2.2 miles from the Hayward Executive Airport. However, the project site is only within the Oakland International Airport's Influence Area (Alameda County Community Development Agency 2012: Figure 3-1). As stated previously, the project would not involve the handling of hazardous materials, substances, or wastes other than those typically used for household cleaning, maintenance, and landscaping. Handling of hazardous materials is subject to applicable federal, state, and local regulations to reduce emissions of hazardous materials into the environment. Therefore, the project would not result in a safety hazard for people residing or working in the project area. The project site is not located within a 60 dB Community Noise Equivalent Level (CNEL) noise contour (Alameda County Community Development Agency 2012: Figure 3-3), and therefore would not result in excessive noise for people residing or working in the project area. Impacts would be less than significant.

**LESS THAN SIGNIFICANT IMPACT**

- f. *Would the project impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?*

The project would not impair or interfere with the City's Emergency Operations Plan because no roads would be closed during construction or operation (City of San Leandro 2017b). Therefore, impacts would be less than significant.

**LESS THAN SIGNIFICANT IMPACT**

- g. *Would the project expose people or structures, either directly or indirectly, to a significant risk of loss, injury, or death involving wildland fires?*

The project site is in an urban area of San Leandro, bordered by existing residential and commercial uses. According to the California Department of Forestry and Fire Protection (CAL FIRE; CAL FIRE 2007, CAL FIRE 2008), the project site is not adjacent to or near a fire hazard severity zone. As a result, no risk of exposing people or structures to a significant risk of loss, injury, or death involving wildland fires would occur.

**NO IMPACT**

# 10 Hydrology and Water Quality

	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
Would the project:				
a. Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b. Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
c. Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would:				
(i) Result in substantial erosion or siltation on- or off-site;	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
(ii) Substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or off-site;	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
(iii) Create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff; or	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
(iv) Impede or redirect flood flows?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
d. In flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
e. Conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

**903 Manor Boulevard Residential Project**

The generally level, developed project site is located approximately 0.2 mile west of the Estudillo Canal and approximately 0.6 mile north of San Lorenzo Creek, which flows in an easterly direction towards San Francisco Bay. Most of the project site is in Flood Zone AE (a 100-year flood zone with base flood elevations determined) identified by Federal Emergency Management Agency (FEMA) Flood Insurance Rate Map Number 06001C0259G, with the central third of the site in Flood Zone X (outside the 100-year and 500-year floodplains) (FEMA 2009).

- a. *Would the project violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality?*

**Construction**

All development projects in San Leandro must comply with the City’s Stormwater Management and Discharge Control Ordinance (SLMC Chapter 3-15), which requires the use of erosion and sediment controls to protect water quality while a site is under construction. During project construction, construction contractors are required to comply with best management practices to filter materials and retain dirt and debris from flowing into the City’s storm sewer system.

Furthermore, the National Pollutant Discharge Elimination System Municipal Regional Stormwater Permit establishes specific requirements to minimize and treat stormwater runoff from new and redevelopment projects. Compliance with state, regional, and local standards and regulations would reduce potential water quality impacts during project construction to a less than significant level.

**Operation**

The proposed project would result in approximately 70,348 square feet (approximately 77 percent of the project site) of impervious surfaces on the project site, which is similar to the existing amount of impervious surfaces on site. Impervious surfaces generally increase stormwater runoff, reduce groundwater infiltration, and pollute stormwater runoff generated on the project site during operation.

Provision C.3 of the Alameda County Municipal Regional Stormwater Discharge Permit addresses post-construction stormwater requirements for new development and redevelopment projects that add and/or replace 10,000 square feet or more of impervious area, or special land use categories that create and/or replace 5,000 square feet of impervious surfaces. These “regulated” projects are required to meet certain criteria: (1) incorporate site design, source control, and stormwater treatment measures into the project design; (2) minimize the discharge of pollutants in stormwater runoff and non-stormwater discharge; and (3) minimize increases in runoff flows as compared to pre-development conditions. Common methods of compliance include installation of Low Impact Development technology such as bioretention basins or rain gardens, which redirect stormwater from stormwater drains to planters where runoff is absorbed and filtered.

The project would be a regulated project under the Municipal Regional Stormwater Discharge Permit and would be required to comply with Provision C.3 to reduce post-construction stormwater pollution. Compliance with applicable City ordinances, state, and regional standards and regulations for construction and operation would ensure that project would not result in a violation of any water quality or sustainable groundwater management plans. The project would also include the construction of bioretention areas throughout the project site, sized to provide adequate stormwater treatment on site. Therefore, the project would have a less than significant impact on water quality.

**LESS THAN SIGNIFICANT IMPACT**

- b. *Would the project substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?*

The project site is located above the Santa Clara Valley-East Bay Plain Groundwater Basin, which experiences saltwater intrusion from the San Francisco Bay as well as subsidence (California Department of Water Resources 2020). As discussed in Section 19, *Utilities and Service Systems*, the proposed project would receive its water from EBMUD. The regional water system collects water from the Mokelumne River in the Sierra Nevada and from protected local watersheds in the East Bay and Peninsula. Therefore, water supply to the project site would not rely on groundwater supplies. The proposed project would not include installation of new groundwater wells or use of groundwater from existing wells. Therefore, the proposed project would not result in a net deficit in aquifer volume or a lowering of the groundwater table. The project would not result in an exceedance of safe yield or a significant depletion of groundwater supplies. Impacts related to groundwater would be less than significant.

#### **LESS THAN SIGNIFICANT IMPACT**

- c.(i) *Would the project substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would result in substantial erosion or siltation on- or off-site?*
- c.(ii) *Would the project substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or off-site?*
- c.(iii) *Would the project substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner that would create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff?*

Estudillo Canal is approximately 0.2 mile east of the project site, and San Lorenzo Creek is approximately 0.6 mile south of the project site. Neither of these waterways flow through or next to the site. The project site is currently developed, and project construction would not alter the course of these waterways (no other surface water features are identified in the project area). The project site connects to an existing stormwater drainage system located in the Estudillo Canal Watershed. Stormwater runoff in the project area currently flows through existing city stormwater drains to Estudillo Canal and eventually to the San Francisco Bay (Alameda County Flood Control District 2020).

The project would involve the construction of impervious surfaces on the project site; however, the project includes bioretention facilities throughout the site, which are sized to provide adequate stormwater treatment on-site. Because the project would retain stormwater on-site and would not increase stormwater runoff, on- or off-site erosion or siltation would not occur during project operation.

Following filtration through the proposed bioretention areas, stormwater from the project site would enter the City's existing stormwater conveyance system. While the project would alter the existing drainage pattern of the site, the project would be required to comply with all applicable

local ordinances, including the SLMC and Provision C.3 of the Alameda County Municipal Regional Stormwater Discharge Permit. Therefore, the proposed project would not create or contribute runoff that would exceed the capacity of the existing stormwater conveyance infrastructure or otherwise result in erosion or siltation on or near the project site. Impacts would be less than significant.

**LESS THAN SIGNIFICANT IMPACT**

- c.(iv) Would the project substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would impede or redirect flood flows?*
- d. In flood hazard, tsunami, or seiche zones, would the project risk release of pollutants due to project inundation?*

Most of the project site falls within Flood Zone AE (a 100-year flood zone with base flood elevations determined) identified by FEMA, with the central third of the site in Flood Zone X (outside the 100-year and 500-year floodplains) (FEMA 2009: Flood Insurance Rate Map Number 06001C0259G). The project would involve the construction of new residential buildings, which are required to have the lowest floor elevation elevated above the determined base flood elevation. This would alter the flood zone boundaries on-site but would not alter the existing drainage pattern in a manner which would substantially impede or redirect flood flows. Inclusion of the bioretention facilities would provide adequate storm drainage from flood events. Additionally, the City of San Leandro participates in the National Flood Insurance Program, which provides affordable insurance to property owners that helps reduce flooding impacts. Impacts from flooding would be less than significant.

The project is outside a mapped tsunami inundation zone, with the nearest zone approximately 0.9 mile to the west (California Department of Conservation 2009). The nearest inland body of water is Lake Chabot, which is approximately 2.9 miles northeast of the project site. There would be no impact from tsunamis or seiches on the project site.

**LESS THAN SIGNIFICANT IMPACT**

- e. Would the project conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?*

The Water Quality Control Plan for the San Francisco Bay Basin includes the project site within the plan boundaries. The plan includes goals for beneficial uses of water in the region. The project would not conflict with these goals or otherwise degrade the water quality of surface water and groundwater in the area, as bioretention facilities would be installed as part of the project to improve the water quality of stormwater runoff. Therefore, the project would not conflict with or obstruct the implementation of applicable plans, and impacts would be less than significant.

**LESS THAN SIGNIFICANT IMPACT**

# 11 Land Use and Planning

	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
Would the project:				
a. Physically divide an established community?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b. Cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

The project site is zoned as a Commercial Community District and designated as Neighborhood Commercial in the 2035 General Plan. The proposed project would include a zoning map amendment to add a Planned Development Overlay District to the project site and a General Plan Map Amendment to change the land use designation to General Commercial. A planned development project must have a minimum net area of 10,000 square feet. The project site is bordered by Manor Boulevard to the south, Residential Single-Family District-zoned properties to the east and north, and Commercial Community and Residential Multi-Family District zones (24 dwellings per gross acre) to the west (City of San Leandro 2019d).

The project site sits in the center of the Washington Manor neighborhood. Densities in this area average about five units per acre, with built improvements consisting primarily of one-story, single-family ranch style residences. This area is generally considered to be fully built out (City of San Leandro 2016a).

*a. Would the project physically divide an established community?*

The project would continue the existing residential development pattern of the area and would not separate connected neighborhoods or land uses. The project would not introduce new roadways outside of the project site, linear infrastructure, or other development features that would divide an established community or limit movement, travel, or social interaction between established land uses. Therefore, the project would not physically divide an established community.

**NO IMPACT**

*b. Would the project cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?*

As mentioned previously, the project site has a zoning designation of Commercial Community. The project includes requests for Planned Development Overlay, General Plan Map Amendment from Neighborhood Commercial to General Commercial, Site Plan Review, and Tentative Map approval.

## **City of San Leandro General Plan**

The project site has a 2035 General Plan land use designation of Neighborhood Commercial. As described above, the project includes a general map plan amendment to change the land use designation from Neighborhood Commercial to General Commercial. With the addition of a Planned Development to the General Commercial designation, as described in the City's 2035 General Plan Land Use Element:

Some of the zoning districts in this designation permit residential uses, subject to conditional use permit requirements and a maximum net density of 24.2 units per acre. In such cases, maximum FARs also applies. Residential uses are not permitted in all districts due to the potential for conflicts with heavier commercial activities and the need to retain land for local services and revenue generation. (City of San Leandro 2016a)

The project would result in residential development at 17 units per acre and would be surrounded on three sides by single-family residences with a commercial shopping center and multi-family apartment complex to the west. The proposed project would be consistent with the land uses envisioned at this type of location under the 2035 General Plan.

## **City of San Leandro Zoning Ordinance**

As noted above, the project would require approval of a Planned Development Overlay District. The purpose of the Planned Development Overlay is to allow developers of large parcels flexibility in the way they meet overall community density and land use goals without being bound by certain prescriptive zoning requirements designed primarily for small parcels. Applications for a Planned Development are subject to the City's discretionary review process and must be approved by the City Council to ensure that the new development will be compatible with the surrounding area (Section 3-1012).

According to San Leandro Zoning Code, the multi-family residential buildings are allowed within Commercial Community districts. Assuming the request for a Planned Development Overlay and General Plan Map Amendment are approved, the proposed project and its use would be consistent with applicable zoning regulations. Impacts would be less than significant (Section 2-692).

### **LESS THAN SIGNIFICANT IMPACT**

# 12 Mineral Resources

	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
--	--------------------------------	--	------------------------------	-----------

Would the project:

a. Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b. Result in the loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan, or other land use plan?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

The nearest quarry is approximately 4 miles east of the project site, on Lake Chabot Road and it ceased operation in the 1980s. While the quarry site contains additional rock resources, future quarrying activity is considered unlikely (City of San Leandro 2016a).

- a. *Would the project result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?*
- b. *Would the project result in the loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan, or other land use plan?*

The project site is not used for mining and is not zoned for mining uses. The proposed project would not result in the loss of availability of a known or locally important mineral resource. Thus, no impact would occur.

**NO IMPACT**

*This page intentionally left blank.*

# 13 Noise

	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
Would the project result in:				
a. Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
b. Generation of excessive groundborne vibration or groundborne noise levels?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
c. For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

An Environmental Noise Assessment was prepared by Illingworth & Rodkin, Inc. on July 23, 2019 for the project and peer reviewed by Rincon Consultants in January 2020. The following analysis incorporates the findings of this report, which has been included as Appendix NOI to this report.

## Noise and Vibration Setting

### Ambient Noise

Noise can be defined as unwanted sound. Noise level measurements include intensity, frequency, and duration, as well as time of occurrence. Noise level (or volume) is generally measured in decibels (dB) using the A-weighted sound pressure level (dBA). The A-weighting scale is an adjustment to the actual sound pressure levels to be consistent with that of human hearing response, which is most sensitive to frequencies around 4,000 Hertz (about the highest note on a piano) and less sensitive to low frequencies (below 100 Hertz).

Sound pressure level is measured on a logarithmic scale with the 0-dBA level based on the lowest detectable sound pressure level that people can perceive (an audible sound that is not zero sound pressure level). Based on the logarithmic scale, a doubling of sound energy is equivalent to an increase of 3 dBA, and a sound that is 10 dBA less than the ambient sound level has no effect on ambient noise. Because of the nature of the human ear, a sound must be about 10 dBA greater than the ambient noise level to be judged as twice as loud. In general, a 3 dBA change in the ambient noise level is noticeable, while 1-2 dBA changes generally are not perceived. Quiet suburban areas

typically have noise levels in the range of 40-50 dBA, while areas adjacent to arterial streets are typically in the 50-60 dBA range. Normal conversational levels are usually in the 60-65 dBA range and ambient noise levels greater than 65 dBA can interrupt conversations.

Noise levels from point sources, such as those from individual pieces of machinery, typically attenuate (or drop off) at a rate of 6 dBA per doubling of distance from the noise source. Noise levels from lightly traveled roads typically attenuate at a rate of about 4.5 dBA per doubling of distance. Noise levels from heavily traveled roads typically attenuate at about 3 dBA per doubling of distance. Noise levels may also be reduced by intervening structures; generally, a single row of buildings between the receptor and the noise source can reduce noise levels by about 5 dBA, while a solid wall or berm can reduce noise levels by 5 to 10 dBA (Federal Transit Administration [FTA] 2018). The manner in which residences in California are constructed generally provides a reduction of exterior-to-interior noise levels of approximately 20 to 25 dBA with closed windows.

The duration of noise is important because sounds that occur over a long period are more likely to be an annoyance or cause direct physical damage or environmental stress. One of the most frequently used noise metrics that considers both duration and sound power level is the equivalent noise level ( $L_{eq}$ ). The  $L_{eq}$  is defined as the single steady A-weighted level that is equivalent to the same amount of energy as that contained in the actual fluctuating levels over a period of time (essentially, the average noise level). Typically,  $L_{eq}$  is summed over a one-hour period.  $L_{max}$  is the highest RMS (root mean squared) sound pressure level within the measurement period, and  $L_{min}$  is the lowest RMS sound pressure level within the measurement period.

The period during which noise occurs is also important, as nighttime noise tends to disturb people more than daytime noise. Community noise is usually measured using the Day-Night Average Level ( $L_{dn}$ ), which is the 24-hour average noise level with a 10-dBA penalty for noise occurring during nighttime (10:00 p.m. to 7:00 a.m.) hours. It is also measured using CNEL, which is the 24-hour average noise level with a 5-dBA penalty for noise occurring from 7:00 p.m. to 10:00 p.m. and a 10-dBA penalty for noise occurring from 10:00 p.m. to 7:00 a.m. The  $L_{dn}$  and CNEL typically do not differ by more than 1 dBA. In practice, CNEL and  $L_{dn}$  are often used interchangeably.

Some land uses are more sensitive to ambient noise levels than other uses due to the amount of noise exposure and the types of activities involved. For example, residences, motels, hotels, schools, libraries, churches, nursing homes, auditoriums, museums, cultural facilities, parks, and outdoor recreation areas are more sensitive to noise than commercial and industrial land uses. The closest noise-sensitive receptors to the project site are the adjacent residences to the north and west.

Noise regulations and ordinances typically establish allowable noise levels for different land uses and define exempt noise activities. Table 6 shows the allowable noise levels for different land uses in the city. SLMC Section 4-1-1115 provides restrictions for construction activities adjacent to or across the street from residential uses. Under the SLMC, construction is restricted to the hours of 7:00 a.m. and 7:00 p.m. on weekdays and between 8:00 a.m. and 7:00 p.m. on weekends. All construction activities adjacent to or across the street from residential uses are prohibited on federal holidays. The SLMC also restricts sustained operation of mechanical devices from between the hours of 9:00 p.m. and 8:00 a.m., unless the device is enclosed within a sound insulated structure, preventing the noise from being plainly audible from any residential property line.

**Table 6 City of San Leandro Noise and Land Use Compatibility Guidelines**

Land Use Category	Noise Exposure Levels (CNEL, dBA)			
	Normally Acceptable	Conditionally Acceptable	Normally Unacceptable	Clearly Unacceptable
Residential – Low Density Single Family, Duplex, Mobile Homes	<60	55-70	70-75	75+
Residential- Multiple Family	<65	60-70	70-75	75+
Transient Lodging, Motels, Hotels	<65	60-70	70-80	80+
Schools, Libraries, Churches, Hospitals, Nursing Homes	<70	60-70	70-80	80+
Auditoriums, Concert Halls, Amphitheaters	NA	<70	NA	65+
Sports Arena, Outdoor Spectator Sports	NA	<75	NA	70+
Playgrounds, Neighborhood Parks	<70	67.5-75	NA	72.5+
Golf Courses, Riding Stables, Water Recreation, Cemeteries	<75	70-80	NA	80+
Office Buildings, Businesses, Commercial and Professional	<70	67.5-77.5	75+	NA
Industrial, Manufacturing, Utilities, Agricultural	<75	70-80	75+	NA

Notes: NA = not applicable

### Vibration

Vibration levels are usually expressed as single-number measure of vibration magnitude, in terms of velocity or acceleration, which describes the severity of the vibration without the frequency variable. The peak particle velocity (PPV) is defined as the maximum instantaneous positive or negative peak of the vibration signal, usually measured in inches per second. Since it is related to the stresses experienced by buildings, PPV is often used in monitoring of blasting vibration. Although PPV is appropriate for evaluating the potential of building damage, it is not suitable for evaluating human response. It takes some time for the human body to respond to vibrations. In a sense, the human body responds to an average vibration amplitude (FTA 2018). Because vibration waves are oscillatory, the net average of a vibration signal is zero. Thus, the RMS amplitude is used to describe the “smoothed” vibration amplitude (FTA 2018). The RMS of a signal is the square root of the average of the squared amplitude of the signal, usually measured in inches per second. The average is typically calculated over a one-second period. The RMS amplitude is always less than the PPV and is always positive. Decibel notation is used to compress the range of numbers required to describe vibration. The general human response to different levels of groundborne vibration velocity levels as well as typical effects of vibration on buildings is described in Table 7.

**Table 7 Human Response to Different Levels of Groundborne Vibration**

Vibration Velocity Level, PPV (in/sec)	Human Reaction	Effect on Buildings
0.01	Barely perceptible	No effect
0.04	Distinctly perceptible	Vibration unlikely to cause damage of any type to any structure
0.08	Distinctly perceptible to strongly perceptible	Recommended upper level of the vibration to which ruins and ancient monuments should be subjected
0.1	Strongly perceptible	Virtually no risk of damage to normal buildings
0.3	Strongly perceptible to severe	Threshold at which there is a risk of damage to older structures such as those with plastered walls or ceilings
0.5	Severe – Vibrations considered unpleasant	Threshold at which there is a risk of damage to newer structures

Source: Appendix NOI

Continued vibration of building components can also take the form of an audible low-frequency rumbling noise, which is referred to as groundborne noise. Groundborne noise is usually only a problem when the originating vibration spectrum is dominated by frequencies in the upper end of the range (60 to 200 Hertz), or when foundations or utilities, such as sewer and water pipes, connect the structure and the vibration source.

The City of San Leandro does not have adopted thresholds for levels at which vibration would cause significant effects. Therefore, thresholds provided by the FTA were used for this analysis. The FTA provides a construction vibration impact criterion of 0.5 PPV for structural damage for modern buildings.

*Measured Ambient Noise Level*

Illingworth and Rodkin conducted short- and long-term ambient noise level measurements along the north, east, and south project site boundaries (Appendix NOI). Table 8 provides the noise monitoring results at these three sites.

**Table 8 Noise Monitoring Results**

Site ID	Location	Measured Noise Levels (dBA)							
		L <sub>max</sub>	L <sub>01</sub>	L <sub>10</sub>	L <sub>eq</sub>	L <sub>50</sub>	L <sub>90</sub>	L <sub>min</sub>	L <sub>dn</sub>
ST-1	260 feet from center of Manor Blvd (eastern site boundary)	58	54	50	48	47	44	42	52 <sup>1</sup>
LT-1	25 feet from center of Manor Blvd (southern site boundary)	81	75	71	66	62	50	46	71
LT-2	425 feet from center of Manor Blvd (northern site boundary)	64	62	58	55	54	51	48	56

<sup>1</sup> Calculated from average difference in measured L<sub>eq</sub> noise levels from LT-1 and LT-2 to ST-1.

Note: ST = short-term noise measurement; LT = long-term noise measurement

Source: Appendix NOI

- a. *Would the project result in generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?*

### *Construction*

Project construction would result in the temporary elevation of noise levels at the project site and surrounding areas. Construction-related noise impacts typically occur when activities take place during noise-sensitive times of the day (e.g., early morning, evening, or nighttime hours), when construction activities occur immediately adjacent to noise sensitive land uses, or when construction durations last over extended periods. Most demolition and construction noise is between 80 to 90 dBA at 50 feet from the source (Appendix NOI: Table 10).

To the north, single-family residential property lines and buildings would be as close as 20 and 40 feet, respectively, from the perimeter of project buildings. To the east, single-family residential property lines and buildings would be as close as 60 and 90 feet, respectively, from the perimeter of project buildings. Considering these distances, construction noise levels during excavation and finishing work could reach levels of 90 to 96 dBA  $L_{eq}$  at the closest residential property lines and levels of 83 to 86 dBA  $L_{eq}$  at the closest residential building. Thus, construction noise levels would exceed 60 dBA  $L_{eq}$  and the existing ambient noise level by at least 5 dBA  $L_{eq}$  during excavation and finishing. However, as construction moves away from residences or into shielded locations, noise exposures would be lower. Based on this, noise generated by construction activities would temporarily elevate noise levels at adjacent noise-sensitive receptors. However, because the noisiest activities (i.e., site demolition and grading work) are expected to be completed within a month, and typical residential building construction (adjacent to the property line of sensitive receivers) are expected to be completed in approximately 11 months, noise impacts on any one adjacent residence would be concluded within one year.

Average construction noise levels during ground clearing and excavation could reach 85 dBA  $L_{eq}$  with maximum noise levels reaching 87 to 92 dBA  $L_{eq}$  at the closest adjacent residences to the project site. As construction moves away from residences or into shielded locations, noise exposures would be lower; construction noise levels would exceed 65 dBA  $L_{eq}$  and 75 dBA  $L_{max}$  during construction at the closest residences. However, given that construction noise would exceed standards, Mitigation Measure NOI-1 would be required to reduce those impacts.

### *Operation*

#### **TRAFFIC**

Project vehicular traffic would not increase noise levels substantially in the area as project site-related traffic would decrease from existing conditions (Section 17, *Transportation*). Typically, for a project to result in a perceptible increase in roadway noise, it must generate a 3-dBA increase in the ambient noise level. A doubling of trips would result in an increase of 3-dBA to the existing ambient noise environment (FTA 2018). Vehicular traffic noise levels are not expected to increase measurably above existing levels as a result of the project (increase would be less than 1 dBA  $L_{dn}$ ). This impact would be less than significant.

#### **EQUIPMENT NOISE**

Mechanical equipment associated with the proposed residential building would include Heating Ventilation and Air Conditioning (HVAC) systems. The primary outdoor noise producing component

for residential HVAC systems is the outdoor condensing units, which based on a review of project plans will be located as close as 25 feet from the northern property line and 55 feet from the eastern property line. The proposed HVAC units would be installed at ground level adjacent to each unit, within or adjacent to proposed porches. The average A-weighted sound level of typical outdoor condensing units for moderate-sized residences typically ranges from 67 to 68 dBA at 3 feet from the units (Appendix NOI). Sound from a fixed-point noise source such as an outdoor condenser typically attenuates at a rate of 6 dBA per distance doubling this would result in sound levels of 49 to 50 dBA at 25 feet. Additionally, the project includes an 8-foot high, solid wood fence on the property lines shared with the existing single-family residential uses to the north and east. Therefore, it is expected that noise from project HVAC systems would be lowered by a minimum of 8 dBA on the properties of these adjacent uses. It is expected that, even with continuous operation, the project-generated HVAC noise would produce an hourly average level of less than 42 dBA on the adjacent single-family residential properties. Therefore, this level would be less than the existing average ambient ( $L_{90}$ ) noise level measure at the northern property line, furthest from existing site and traffic noise sources (noise monitoring site LT-2, see Table 8) and HVAC noise would not be significant.

### **PARKING NOISE**

The project also includes a driveway and parking areas adjacent to the property line shared with the single-family residential uses to the east. This project element has the potential to introduce a new and dissimilar type of noise source into the existing noise environment, in particular at the residential uses on the northern part of the eastern property line, which previously bordered the bowling alley instead of the existing parking lot. Noise associated with driveway and parking activities is typically dominated by the sounds of passing cars, engine starts, and door slams. At 40 feet (which is the average distance of a parked car to the property line), noises from parking activities such as engine starts and door slams would range from 54 to 64 dBA, and at 15 feet (which is the approximate distance from the driveway centerline to the property line), cars traveling at 15 to 20 miles per hour would produce sound levels of 61 to 66 dBA. Considering these levels and the sound attenuation provided by the proposed 8-foot, solid wood fence on the property line discussed above, noise from parking activities would range from 46 to 56 dBA, and auto pass-by noise would range from 53 to 58 dBA. These maximum noise levels from automobile parking and driveway activities on a typical day would occur less than 15 minutes out of any hour, given the size of the proposed project. This level of activity would result in an equivalent hourly  $L_{eq}$  of less than 50 dBA on the adjacent single-family residential properties, a level that is less than the existing average hourly daytime noise level measured at the residential property line furthest from existing site and traffic noise sources (noise monitoring site LT-2, see Table 8). Parking noise would not be significant.

### **Mitigation Measure**

#### *NOI-1 Construction Noise Best Management Practices*

- Pursuant to SLMC, noise-generating activities including construction traffic at the construction site or in areas adjacent to the construction site shall be restricted to the hours of 7:00 a.m. and 7:00 p.m. on weekdays, and to between the hours of 8:00 a.m. and 7:00 p.m. on Saturdays and Sundays, with no construction on Federal holidays.
- Machinery shall not be cleaned or serviced past 7:00 p.m. or prior to 7:00 a.m. Monday through Friday or 8:00 a.m. on Saturdays and Sundays.

- Install a temporary construction noise barrier with a height of 8 feet above grade on the project property lines shared with the residential properties to the north and east before loud construction activities begin and keep in place until construction within 150 feet of the barrier location is complete. The placement of the barriers should not allow clear line of sight, or openings for site access between the site activities and adjacent residential land uses. The barriers may be composed of mass loaded construction blankets on temporary fencing or solid plywood construction barriers and should have a minimum surface weight of 1.0 lb/ft<sup>2</sup> and an equivalent STC rating of 25 or more.
- Muffle and maintain all equipment used on site. All internal combustion engine-driven equipment shall be fitted with mufflers that are in good condition. The use of effective mufflers shall result in non-impact tools generating a maximum noise level of 80 dB when measured at a distance of 50 feet.
- Utilize “quiet” models of air compressors and other stationary noise sources where technology exists.
- Locate stationary noise-generating equipment as far as possible from sensitive receptors when sensitive receptors adjoin or are near a construction project area.
- Prohibit unnecessary idling of internal combustion engines.
- Prohibit construction workers’ radios that are audible on adjoining properties.
- Restrict noise-generating construction activities at the site or in areas adjacent to the construction site to the hours between 8:00 a.m. and 5:00 p.m., Monday through Friday.
- Limit the allowable hours for the delivery of materials or equipment to the site and truck traffic coming to and from the site for any purpose to Monday through Friday between 7:00 a.m. and 6:00 p.m.
- Do not allow any construction or construction-related activities at the project site on weekends and holidays.
- Allowable construction hours shall be posted clearly on a sign at the construction site.
- The construction contractor shall designate a “noise disturbance coordinator” who will be responsible for responding to any local complaints about construction noise. A telephone number for the disturbance coordinator shall be conspicuously posted at the construction site. The Disturbance Coordinator shall:
  - Receive and act on complaints about construction disturbances during site clearing, excavation, infrastructure installation, road building, residential construction, and site other construction activities.
  - Determine the cause(s) and implement remedial measures as necessary to alleviate significant problems.
  - Clearly post his/her name and phone number(s) on a sign at the construction site.
  - Notify area residents of construction activities, schedules, and potential impacts.

Implementation of Mitigation Measure NOI-1 would reduce average ( $L_{eq}$ ) construction related noise levels to less than 65 dBA levels at exterior areas of residential uses in the project vicinity and maximum ( $L_{max}$ ) construction related noise levels to less than 75 dBA at the exterior facades of residences in the project vicinity. Therefore, construction related noise impacts would be reduced to less than significant levels.

**LESS THAN SIGNIFICANT WITH MITIGATION INCORPORATED**

*b. Would the project result in generation of excessive groundborne vibration or groundborne noise levels?*

Project operation would not be a source of vibration. However, project construction would result in some vibration that may be felt on properties in the project vicinity from demolition, site preparation, foundation work, and building-framing activities. Based on a review of the existing site, surrounding uses, and the proposed site plan, residential buildings and businesses adjacent to the project will be located within 12 to 30 feet of vibration-inducing parking lot removal and building demolition activities, and 12 to 40 feet from site excavation and grading activities. These site activities may produce substantial vibration and can be expected to result in periods where vibration within residences and businesses adjacent to the site exceed the 0.04 in/sec PPV annoyance threshold. However, the erection of the buildings and structures themselves is not anticipated to be a source of substantial vibration, with the exception of sporadic events such as dropping of heavy objects. On-site construction is expected to occur over a 20-month period. Considering this, construction vibration is only expected to have the potential to impact neighboring uses for a one-month period and would not result in perceptible vibration for most of project construction period.

All adjacent buildings appear to be of normal type construction, with no indications of structural sensitivity. Groundborne vibration levels exceeding 0.50 in/sec PPV would thus have the potential to result in damage to these adjacent buildings. As shown in Table 9, construction equipment would generate vibration of up to 0.44 PPV at 12 feet and 0.13 PPV at 40 feet, and all construction activities would be below the 0.50 PPV threshold. Vibration impacts would be less than significant, and no mitigation would be required.

**Table 9 Vibration Levels for Construction Equipment**

<b>Equipment</b>	<b>PPV at 12 feet (in/sec)</b>	<b>PPV at 40 feet (in/sec)</b>
Vibratory Roller (undefined tonnage)	0.44	0.13
2-ton Vibratory Roller	0.29	0.06
Hoe Ram	0.19	0.06
Large Bulldozer	0.19	0.06
Caisson Drilling	0.19	0.06
Loaded Trucks	0.16	0.05
Jackhammer	0.07	0.02
Small Bulldozer	0.01	<0.01

Source: Appendix NOI

**LESS THAN SIGNIFICANT IMPACT**

- c. *For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within 2 miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?*

Hayward Executive Airport is the nearest private airstrip, approximately 2.2 miles south of the project site. The nearest public airport is the Oakland International Airport, 3.8 miles northwest of the project site. The project site is not within 2 miles of a public or private airstrip or airport, and thus no impacts would occur.

**NO IMPACT**

*This page intentionally left blank.*

# 14 Population and Housing

	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
--	--------------------------------	--	------------------------------	-----------

Would the project:

a. Induce substantial unplanned population growth in an area, either directly (e.g., by proposing new homes and businesses) or indirectly (e.g., through extension of roads or other infrastructure)?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b. Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

According to the California Department of Finance, San Leandro has an estimated population of 89,825, with 32,606 housing units, as of January 2019 (DOF 2019). The average number of persons per household is estimated at 2.89. Based on the City’s 2035 General Plan, the projected population in 2035 would be 101,250 persons occupying 36,868 households (City of San Leandro 2016a).

a. *Would the project induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?*

The proposed project would replace an existing commercial building with 39 new townhome units. Therefore, the project would directly generate population growth. Based on a per-person household rate of 2.89 (DOF 2019), the project would add an estimated 113 new residents to the city. The project would increase the population of San Leandro to 89,938, an increase that falls well within the growth to 101,250 persons projected by the 2035 General Plan. Therefore, the proposed project would not induce directly nor indirectly substantial, unplanned population growth.

**LESS THAN SIGNIFICANT IMPACT**

b. *Would the project displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?*

The project site currently contains a commercial building utilized as a bowling alley. The proposed project is an infill development project that would replace the existing commercial building with 39 townhomes. No residences would be demolished as part of the project. Therefore, the project would not displace existing people or housing.

**NO IMPACT**

*This page intentionally left blank.*

# 15 Public Services

	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
a. Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, or the need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services:				
1 Fire protection?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
2 Police protection?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
3 Schools?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
4 Parks?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
5 Other public facilities?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

The Alameda County Fire Department (ACFD), through a contract with the City, provides fire protection to the project site and responds to all fires, hazardous materials spills, and medical emergencies (including injury accidents) in the project area and the city. The ACFD operates five fire stations and one training facility in San Leandro and is divided into four branches: Operations, Communication and Special Operations, Administrative Support Services, and Fire Prevention. In addition to fire and emergency response, the ACFD provides permitting, inspection, and planning services through the Fire Prevention Branch. The City’s 2035 General Plan establishes a goal of a total response time (reflex) of five minutes for 90 percent of emergency incidents (City of San Leandro 2016a).

The San Leandro Police Department (SLPD) provides police protection services in San Leandro. The Police Chief and two police captains administer SLPD, presiding over the Bureau of Operations and the Bureau of Services. The Bureau of Operations houses two units: the Patrol and Traffic Unit and the Investigations Unit. The Bureau of Services houses the Professional Standards and Support Services Units (SLPD 2020). As of 2019, SLPD had 93 sworn officers with a ratio of approximately 1.03 officers per 1,000 residents which is slightly lower than the SLPD’s desired ratio of 1.04 per 1,000 residents (City of San Leandro 2016a).

Schools nearest the project site include Washington Manor Middle School, 0.23 mile southwest of the project site; Corvallis Elementary School, 0.38 mile northwest of the project site; and Woodroe Woods School, 0.35 mile southeast of the project site.

**903 Manor Boulevard Residential Project**

The San Leandro Public Library currently operates one main facility, the San Leandro Main Library, and three branch facilities in the city: Manor Branch, South Branch, and Mulford-Marina Branch (City of San Leandro 2016a). The nearest library facility to the project site is the Manor Branch, at 1241 Manor Boulevard, 0.3 mile directly east of the project site.

Existing parks and recreation facilities in the city and project-related impacts on parks and recreation facilities are discussed in Section 16, *Recreation*.

*a.1. Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered fire protection facilities, or the need for new or physically altered fire protection facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives?*

ACFD Station 13, located at 637 Fargo Avenue, is approximately 0.6 mile from the project site and currently serves the project site. Project construction would be required to comply with applicable California Fire Code standards for residential developments (California Code of Regulations, Title 25, Part 9). Station 13 houses one engine company and services an area of approximately 3.25 square miles, which is densely populated with predominantly single-family dwellings and also covers portions of I-880 and I-238 (ACFD 2020). The project site is located in a developed area and involves replacement of a commercial use with residential uses. According to the ACFD Standards of Coverage Review conducted in 2017, the department has adequate services and infrastructure to meet existing and future demand (Alameda County 2017). While the project would increase the number of residents served by ACFD, the increase would not result in a substantial change to performance objectives for Station 13 and would not require the need for new facilities or to physically alter Station 13 to maintain performance objectives. The proposed townhomes would be similar in terms of demand from ACFD services to the existing multi-family housing adjacent to the project site. Therefore, there would be no need for new or expanded fire department facilities to serve the project. Impacts would be less than significant.

**LESS THAN SIGNIFICANT IMPACT**

*a.2. Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered police protection facilities, or the need for new or physically altered police protection facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives?*

The project would add approximately 113 new residents at the project site, which would increase demand for police protection services. The SLPD maintains a ratio of 1.03 sworn officers per 1,000 residents and aims to provide a ratio of 1.04 officers per 1,000 residents (City of San Leandro 2016a). Despite the addition of 113 new residents, this ratio would remain at 1.03 officers per 1,000 residents with the addition of the proposed project. Existing police service would not result in the need for new or expanded police facilities beyond the existing need for additional officers. Therefore, impacts would be less than significant.

**LESS THAN SIGNIFICANT IMPACT**

*a.3. Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered schools, or the need for new or physically altered schools, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios or other performance objectives?*

The project's additional residents would increase the number of students attending schools operated by the San Leandro Unified School District. The project would generate approximately 13.6 new students, per a generation rate of 0.35 students per housing unit (City of San Leandro 2016a). The applicant for the proposed project would be required to pay school development fees, as dictated by state law, prior to the issuance of building permits. According to Government Code Section 65996 (3)(h), payment of such fees constitutes full mitigation of any school impacts under CEQA. Therefore, any impacts from the increase in school enrollment would be offset by the required payment of development fees. This impact would be less than significant.

**LESS THAN SIGNIFICANT IMPACT**

*a.4. Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered parks, public facilities, or the need for new or physically altered parks, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios or other performance objectives?*

Project-related impacts to parks are discussed in Section 16, *Recreation*. The project would not result in a new park or require the physical altering of an existing park or public facility. Impacts would be less than significant.

**LESS THAN SIGNIFICANT IMPACT**

*a.5. Would the project result in substantial adverse physical impacts associated with the provision of other new or physically altered public facilities, or the need for new or physically altered public facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives?*

The project would add 113 new residents to San Leandro, thereby increasing demand for library services. The 2035 General Plan EIR noted that buildout of the 2035 General Plan would result in 14,790 new residents in the city by 2040 and the San Leandro Public library would need to increase the hours of library operation to accommodate future demand (City of San Leandro 2016a). The number of residents introduced by the project represents less than one percent of the growth anticipated in the 2035 General Plan EIR and would not be constitute significant or unplanned growth. Therefore, the impact related to the provision of library services under the proposed project would be less than significant.

**LESS THAN SIGNIFICANT IMPACT**

*This page intentionally left blank.*

# 16 Recreation

	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
a. Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b. Does the project include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

As of 2019, the City of San Leandro provides and manages approximately 23 parks (City of San Leandro 2016a). It also manages two community centers. Parks nearest the project site include Washington Manor Park, approximately 0.1 mile north and Floresta Park, approximately 1 mile northeast. Washington Manor Park is 15 acres in size and features a new aquatic center and community room, tennis courts, barbecue pits, basketball courts, playground apparatuses, two softball areas and an open grassy field (City of San Leandro 2019c). Floresta Park offers both picnic and play areas (City of San Leandro 2019b).

The project site is currently home to a private recreational bowling facility, Manor Bowl. Manor Bowl operates a 30-lane facility and is the last bowling alley in the city of San Leandro.

a. *Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?*

The project would add an additional 113 residents to the area. In addition, the removal of the bowling alley as a private recreational facility has the potential to slightly increase the use of other existing recreation facilities. However, to address the additional park needs that would be produced by the proposed project, the applicant is required to comply with City requirements for park land dedication and/or payment of a park land acquisition fee, and a park improvement fee (SLMC Section 7-1-855). The applicant would pay a park land acquisition and a park improvement fees at the time of building permit issuance. The City considers payment of park fees as adequate mitigation of development impacts to nearby recreation facilities (City of San Leandro 2016a). Therefore, this impact would be less than significant.

**LESS THAN SIGNIFICANT IMPACT**

**903 Manor Boulevard Residential Project**

- b. *Does the project include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment?*

The proposed project would not include construction of new public recreation facilities. While the project would include 4,894 square feet of publicly accessible open space and 3,493 square feet of private open space for residents, maintenance of this space would be the ongoing responsibility of the project. Since public and private open space is a component of the project, the environmental consequences of its construction and operation are comprehensively assessed throughout this document. Where appropriate, measures to mitigate the project's effects have been included, which would mitigate any impact associated with construction of the project's open space. Therefore, this impact would be less than significant.

**LESS THAN SIGNIFICANT IMPACT**

# 17 Transportation

	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
Would the project:				
a. Conflict with a program, plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b. Conflict or be inconsistent with CEQA Guidelines section 15064.3, subdivision (b)?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
c. Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible use (e.g., farm equipment)?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
d. Result in inadequate emergency access?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

A Trip Generation Memorandum was prepared by Hexagon Transportation Consultants, Inc. on October 11, 2019 for the project. The following analysis incorporates the findings of this memorandum, which has been included as Appendix TRP to this report.

- a. *Would the project conflict with a program, plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities?*

Table 10 provides the estimated trip generation of the project and the existing trip generation for Manor Bowl, based on trip generation rates published in the *Institute of Transportation Engineers Trip Generation Manual*, 10<sup>th</sup> Edition. As shown therein, the net peak hour trips to and from the project site would decrease or remain the same with demolition of the bowling alley and construction of townhomes. The detached single-family residential land use trip generation estimate was used because the Institute of Transportation Engineers does not have a trip generation estimate for townhomes, and this provides a conservative estimate of generated trips as it has the highest trip generation rate of the residential land use types.

AC Transit Route 34 provides bus service twice hourly in each direction between 6:00 a.m. and 11:00 p.m. to the intersection Farnsworth Street and Manor Boulevard, located 0.28 mile west of the project site. Route S also provides service to this intersection but is limited to the hours between 4 p.m. and 8 p.m. on weekdays. There are no bicycle routes or lanes adjacent to the project site (although a future Class III bicycle route is proposed in the City of San Leandro General Plan), with the nearest bicycle-friendly roadways located approximately 0.3 mile from the site along Fargo Avenue and Farnsworth Street. Sidewalks for pedestrian usage are located along Manor Boulevard adjacent to the project site, as well as nearby residential streets.

**Table 10 Estimated Project Vehicle Trip Generation**

ITE Land Use	Weekday Peak Hour		Total Daily Trips
	AM	PM	
Existing: 437 Bowling Alley	44	39	440 <sup>2</sup>
Proposed: 210 Single Family Detached Housing <sup>1</sup>	29	39	368
<b>Net Trips</b>	<b>(16)</b>	<b>0</b>	<b>(72)</b>

<sup>1</sup> The ITE manual does not include a category for attached townhomes with individual garages. The use of the single-family detached housing category presents a conservative analysis because it has the highest rate of trips per unit.

<sup>2</sup> The total daily trips for the existing land use was calculated based on an assumption that the peak hour trips represent 1/10<sup>th</sup> of the total daily trips. This calculation was used in order to estimate the net daily trips from removal of the bowling alley and addition of the proposed townhomes.

Parentheses ( ) indicate a reduction in trips.

Source: Appendix TRP

The City of San Leandro General Plan designates Manor Boulevard adjacent to the site for a future Class III bicycle route and contains goals and policies for the development of pedestrian- and bicycle-friendly roadways, including complete streets and bicycle circulation considerations. The project would not impede the development of these features along Manor Boulevard or nearby roadways. The introduction of townhomes to the project site would not increase vehicle traffic beyond existing conditions (Table 10), and residents would have access to existing adjacent pedestrian facilities, and proposed bicycle storage lockers. Impacts would be less than significant.

**LESS THAN SIGNIFICANT IMPACT**

b. *Would the project conflict or be inconsistent with CEQA Guidelines section 15064.3, subdivision (b)?*

The City of San Leandro has not adopted vehicle miles travelled (VMT) thresholds. In lieu of adopted thresholds, a comparison of VMT from the existing and proposed project uses was conducted. Although the project is not near a high-quality transit corridor,<sup>1</sup> the net trip generation as a result of the project would decrease during the AM peak hour and remain the same during the PM peak hour. Therefore, VMT from project site uses can be reasonably assumed to remain the same or experience a slight decrease due to the reduction in total trips. Impacts would be less than significant.

**LESS THAN SIGNIFICANT IMPACT**

c. *Would the project substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible use (e.g., farm equipment)?*

d. *Would the project result in inadequate emergency access?*

Two driveways on Manor Boulevard offers access to the existing bowling alley. The project would remove the western driveway and reconfigure the eastern driveway, which would serve as the entrance to on-site roadways and vehicle circulation. The proposed driveway would be approximately 26 feet in width (meeting the SLMC Section 3-10-515 20-foot requirement) and would meet the City’s minimum driveway visibility requirements (San Leandro Zoning Code Section 4-1728). Proposed townhome buildings would be set back from Manor Boulevard in accordance

<sup>1</sup> A project is within a high-quality transit corridor if it is within 0.5 mile of a major transit stop, which is served every 15 minutes.

with SLMC and landscaping on either side of the driveway would consist primarily of low ornamental shrubs, which would not obstruct line of sight for vehicles entering and exiting the project site.

The proposed circulation on the project site includes adequate turn-around space for large vehicles (such as waste collection vehicles) and emergency vehicles. The project would not alter off-site roadways, create new roadway conflicts, or obstruct emergency access to nearby properties. One site access driveway from Manor Boulevard is proposed, with adequate line-of-site for vehicles entering and exiting the site. The project would not increase traffic hazards or result in inadequate emergency access. The project would provide adequate emergency access, which ACFD's review of the project site plan will confirm during the City's approval process. The project site would be required to meet the standards set forth by the ACFD. Compliance with existing regulations would reduce impacts to a less than significant level.

**LESS THAN SIGNIFICANT IMPACT**

*This page intentionally left blank.*

# 18 Tribal Cultural Resources

	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
--	--------------------------------	--	------------------------------	-----------

Would the project cause a substantial adverse change in the significance of a tribal cultural resource, defined in a Public Resources Code Section 21074 as either a site, feature, place, or cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:

- |   |                          |                                     |                          |                          |
|---|--------------------------|-------------------------------------|--------------------------|--------------------------|
| <p>a. Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code Section 5020.1(k), or</p>   | <input type="checkbox"/> | <input checked="" type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |
| <p>b. A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resources Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.</p> | <input type="checkbox"/> | <input checked="" type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |

On July 1, 2015, California Assembly Bill 52 (AB 52) was enacted. The law expands CEQA by defining a new resource category, tribal cultural resources. AB 52 establishes that “a project with an effect that may cause a substantial adverse change in the significance of a tribal cultural resource is a project that may have a significant effect on the environment” (PRC Section 21084.2). It further states that the lead agency shall establish measures to avoid impacts that would alter the significant characteristics of a tribal cultural resource, when feasible (PRC Section 21084.3).

PRC Section 21074 (a)(1)(A) and (B) defines tribal cultural resources as “sites, features, places, cultural landscapes, sacred places, and objects with cultural value to a California Native American tribe” and is:

1. Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1(k), or
2. A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1. In applying these criteria, the lead agency shall consider the significance of the resource to a California Native American tribe.

AB 52 also establishes a formal consultation process for California tribes regarding those resources. The consultation process must be completed before a CEQA document can be certified. Under AB 52, lead agencies are required to “begin consultation with a California Native American tribe that is traditionally and culturally affiliated with the geographic area of the proposed project.” Native American tribes to be included in the process are those that have requested notice of projects proposed within the jurisdiction of the lead agency.

- a. *Would the project cause a substantial adverse change in the significance of a tribal cultural resource as defined in Public Resources Code Section 21074 that is listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code Section 5020.1(k)?*
- b. *Would the project cause a substantial adverse change in the significance of a tribal cultural resource as defined in Public Resources Code Section 21074 that is a resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1?*

No tribes have requested consultation from the City of San Leandro pursuant to Public Resources Code Section 21080.3.1. Although no tribal cultural resources are expected to be present on the site, there is the possibility of encountering undisturbed subsurface tribal cultural resources. Grading the project site could potentially result in significant impacts on unanticipated tribal cultural resources. Mitigation Measure TCR-1 would reduce impacts on unidentified tribal cultural resources to a less than significant level.

## **Mitigation Measure**

### *TCR-1 Unanticipated Discovery of Tribal Cultural Resources*

In the event that cultural resources of Native American origin are identified during construction, all earth-disturbing work within 50 feet of the find must be temporarily suspended or redirected until an archaeologist has evaluated the nature and significance of the find and an appropriate Native American representative, based on the nature of the find, is consulted. If the City, in consultation with local Native Americans, determines the resource is a tribal cultural resource and thus significant under CEQA, a mitigation plan shall be prepared and implemented in accordance with state guidelines and in consultation with Native American groups. The plan would include avoidance of the resource or, if avoidance of the resource is infeasible, the plan would outline the appropriate treatment of the resource in coordination with the archeologist, if applicable, and the appropriate Native American tribal representative.

Implementation of Mitigation Measure TCR-1 would reduce impacts to less than significant levels.

**LESS THAN SIGNIFICANT WITH MITIGATION INCORPORATED**

# 19 Utilities and Service Systems

	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
--	--------------------------------	--	------------------------------	-----------

Would the project:

a. Require or result in the relocation or construction of new or expanded water, wastewater treatment or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b. Have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry and multiple dry years?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
c. Result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
d. Generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
e. Comply with federal, state, and local management and reduction statutes and regulations related to solid waste?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

The site is served by the EBMUD for water supply, Oro Loma Sanitary District (OLSD) for wastewater treatment, the City of San Leandro for stormwater, PG&E for gas and electricity, AT&T and Comcast for telecommunications services, and Waste Management for solid waste.

- a. *Would the project require or result in the relocation or construction of new or expanded water, wastewater treatment or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?*

## **Water**

EBMUD would provide potable water to the project, as it does to other commercial, institutional, and residential customers in the project area. A total of 90 percent of EBMUD's water supply is sourced from the Mokelumne River Watershed, and the remaining 10 percent comes from protected watershed lands and reservoirs in the East Bay Hills (City of San Leandro 2016a). EBMUD's water supply system was designed and constructed to deliver 325 million gallons per day (MGD), which has a surplus capacity of 95 MGD in the highest water demand year. The proposed project would increase demand for water above existing conditions on the project site. The project's estimated water generation would be approximately 4.14 million gallons per year (Appendix AQ), or approximately 11,350 gallons per day,<sup>2</sup> which is approximately 0.006 percent of EBMUD's water supply during a normal year and approximately 0.012 percent of EBMUD's water supply system surplus capacity. Therefore, EBMUD's water supply system has sufficient capacity to serve the project from existing entitlements and resources. This would be a less than significant impact.

## **Wastewater**

The OLSD would provide wastewater treatment services for wastewater generated on the project site. OLSD encompasses 13 square miles, serving approximately 135,000 customers, including residential, commercial, and light industrial users. The OLSD's wastewater treatment plant has an average dry weather flow of 12.2 MGD, with a design flow of 20 MGD (OLSD 2020). The project's estimated wastewater generation would be approximately 3.45 million gallons per year (assuming water use is approximately 120 percent of wastewater generation), or approximately 9,458 gallons per day. This would represent approximately 0.12 percent of the OLSD's wastewater treatment plant remaining capacity. Therefore, the proposed project would not require the construction of new municipal wastewater treatment facilities or impact the treatment capacity of existing municipal wastewater treatment providers. Impacts to wastewater treatment facilities would be less than significant.

## **Stormwater**

The project would be designed and engineered with drainage features appropriate to accommodate the needs of the proposed project. As discussed in Section 10, *Hydrology and Water Quality*, the project would include the construction of bioretention areas throughout the project site, sized to provide adequate stormwater treatment on site. These features ensure compliance with Provision C.3, and the project would be regulated under the Municipal Regional Stormwater Discharge Permit. The proposed project would not require the construction of new off-site stormwater drainage facilities or expansion of existing facilities. Impacts would be less than significant.

## **Electricity, Natural Gas, and Telecommunications**

A significant impact to electricity, natural gas, and telecommunications facilities may occur if a project's demand for these services exceeds the capacity of local providers. PG&E provides gas and

---

<sup>2</sup> Note that this estimate does not subtract existing water usage, which provides a conservative estimate as the increase in water demand will be lower than estimated here.

electric utilities to the project site, and AT&T and Comcast provide telecommunications services at the discretion of the project residents. Telecommunications are generally available in the project area, and facility upgrades would not likely be necessary.

As described in Section 6, *Energy*, the project would require approximately 665 MMBtu/yr of electricity and approximately 886 MMBtu/yr of natural gas. PG&E maintains power lines along Manor Boulevard as well as along the western project site boundary. The substation that powers lines in the vicinity of the project site has a capacity of 29.7 megawatts (MW) and a peak load of 12.3 MW, with a remaining capacity of 17.4 MW (PG&E 2020). The project would require approximately 0.02 MW, approximately 0.1 percent of the remaining capacity of the PG&E substation that serves the project site. For 2017, the total system of natural gas that PG&E provided was 2,222 million cubic feet per day, or 2,304,214 MMBtu per year (California Gas and Electric Utilities 2018). Therefore, natural gas demand generated by the project would represent less than 0.1 percent of PG&E's natural gas demand. Accordingly, the project would be accommodated adequately by existing electricity, natural gas, and telecommunication facilities and would not require improvements to existing facilities, or the provision of new facilities, that would cause significant environmental effects. This impact would be less than significant.

#### **LESS THAN SIGNIFICANT IMPACT**

- b. Would the project have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry and multiple dry years?*

As described above, EBMUD would provide water service to the project. EBMUD's 2015 Urban Water Management Plan addresses the district's water system and includes descriptions of water supply sources, water use, comparisons of supply and demand during dry years. Per the Urban Water Management Plan, normal year, single dry year, and multiple dry year supply and demand comparisons are shown in Table 11.

**Table 11 EBMUD Supply and Demand in Million Gallons Per Day for Normal, Single Dry, and Multiple Dry Year**

Dry Years	Year				
	2015	2020	2025	2030	2035
<b>Normal Year</b>					
Supply Totals	190	217	218	222	230
Demand Totals	190	217	218	222	230
Difference	0	0	0	0	0
<b>Single Dry Year</b>					
Supply Totals	181	204	205	209	214
Demand Totals	181	204	205	209	214
Difference	0	0	0	0	0
<b>Second Dry Year</b>					
Supply Totals	152	174	174	178	183
Demand Totals	152	174	175	178	184
Difference	0	0	0	0	0
<b>Third Dry Year</b>					
Supply Totals	152	174	173	166	162
Demand Totals	152	174	174	178	183
Difference	0	0	2	13	24

Notes: Parentheses denote a negative number

Source: EBMUD 2016

Table 11 shows that EBMUD’s projected water supplies are sufficient to meet projected demands during normal and multiple dry year conditions. During a severe drought condition, under the third dry year scenario, the district will not have adequate supplies and would need to impose mandatory water use restrictions (EBMUD 2016). Therefore, there would be adequate water supply to server the project in average, single dry, and multiple dry years. This impact would be less than significant.

**LESS THAN SIGNIFICANT IMPACT**

- c. *Would the project result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project’s projected demand in addition to the provider’s existing commitments?*

As described in response to question (a), above, the project’s estimated wastewater generation would be approximately 3.45 million gallons per year (assuming water use is approximately 120 percent of wastewater generation), or approximately 9,458 gallons per day. This would represent approximately 0.12 percent of the OLSD’s wastewater treatment plant remaining capacity. Therefore, the proposed project would be served by wastewater facilities that have adequate capacity to serve the project in addition to OLSD’s existing wastewater treatment commitments. Impacts would be less than significant.

**LESS THAN SIGNIFICANT IMPACT**

- d. *Would the project generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?*
- e. *Would the project comply with federal, state, and local management and reduction statutes and regulations related to solid waste?*

Waste Management provides solid waste and recycling disposal services in the project vicinity and has provided a will-serve letter (dated October 21, 2019; Appendix WM) for the provision of trash, recycling, and organics services to the proposed project. In 2018, 98 percent of the city’s solid waste went to seven landfills: Altamont Landfill, Newby Island Sanitary Landfill, North County Landfill and Recycling Center, Potrero Hills Landfill, Recology Hay Road, Redwood Landfill, and Vasco Road Sanitary Landfill (CalRecycle 2020a). Table 12 shows the permitted capacity and closure dates for these landfills.

**Table 12 Estimated Landfill Capabilities and Closure Dates**

<b>Landfill Facility</b>	<b>Permitted Capacity (cubic yards)</b>	<b>Remaining Capacity (cubic yards)</b>	<b>Maximum Permitted Throughput (tons per day)</b>	<b>Anticipated Closure Date</b>
Altamont Landfill	124,400,000	65,400,000	11,150	2025
Newby Island Sanitary Landfill	57,500,000	21,200,000	4,000	2041
North County Landfill and Recycling Center	41,200,000	35,400,000	825	2048
Potrero Hills Landfill	83,100,000	13,872,000	4,330	2048
Recology Hay Road	37,000,000	30,433,000	2,400	2077
Redwood Landfill	26,077,000	26,000,000	2,300	2036
Vasco Road Sanitary Landfill	32,970,000	7,379,000	2,518	2022

Source: CalRecycle 2020b

Waste Management would collect solid waste from the project site. The project residents would generate typical household solid waste and recyclables. In addition, construction would generate construction and demolition debris. At least 50 percent of construction waste would be recycled, in compliance with SLMC (refer to Chapter 3-7, Construction and Demolition Debris Waste Reduction and Recycling Requirements, of the SLMC).

Assuming 2.89 residents would be generated per dwelling unit (DOF 2019), the proposed project would add an estimated 113 residents. Using an estimated solid waste generation rate provided by CalRecycle for residential land uses, the proposed project would result in an increase of approximately 477 pounds of solid waste per day, or 87 tons per year (using a rate of 12.23 pounds per household per day) (CalRecycle 2020c). This represents approximately 0.00087 percent of the combined permitted daily throughput of the seven landfills (listed above) serving the City. This does not represent a substantial increase in waste at any of the seven landfills serving the project area or and the project would not be served by a landfill without sufficient capacity. The project would comply with state and local statues and regulations related to solid waste regarding increased

City of San Leandro

**903 Manor Boulevard Residential Project**

recycling efforts per Assembly Bill 341 and the City's 2035 General Plan. Therefore, impacts would be less than significant.

**LESS THAN SIGNIFICANT IMPACT**

## 20 Wildfire

	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
--	--------------------------------	--	------------------------------	-----------

If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, would the project:

- |  |                          |                          |                          |                                     |
|--|--------------------------|--------------------------|--------------------------|-------------------------------------|
| a. Substantially impair an adopted emergency response plan or emergency evacuation plan?   | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input checked="" type="checkbox"/> |
| b. Due to slope, prevailing winds, and other factors, exacerbate wildfire risks and thereby expose project occupants to pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?   | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input checked="" type="checkbox"/> |
| c. Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment? | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input checked="" type="checkbox"/> |
| d. Expose people or structures to significant risks, including downslopes or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?   | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input checked="" type="checkbox"/> |

- a. *If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, would the project substantially impair an adopted emergency response plan or emergency evacuation plan?*
- b. *If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, would the project due to slope, prevailing winds, and other factors, exacerbate wildfire risks and thereby expose project occupants to pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?*
- c. *If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, would the project require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?*

**903 Manor Boulevard Residential Project**

- d. *If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, would the project expose people or structures to significant risks, including downslopes or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?*

Very High Fire Hazard Severity Zones in the San Leandro are located east of I-580 in the East Bay Hills. The project site is located within an urbanized area of the San Leandro and is surrounded by existing urban development. The project site is not located within a state responsibility area or near a very high fire hazard severity zone, with the nearest very high fire hazard severity zone located east of the City approximately 2 miles from the project site (CAL FIRE 2007, CAL FIRE 2008). There would be no impact to wildfire hazards.

**NO IMPACT**

# 21 Mandatory Findings of Significance

	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
--	--------------------------------	--	------------------------------	-----------

Does the project:

- |  |                          |                                     |                          |                          |
|--|--------------------------|-------------------------------------|--------------------------|--------------------------|
| <p>a. Have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?</p> | <input type="checkbox"/> | <input checked="" type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |
| <p>b. Have impacts that are individually limited, but cumulatively considerable? (“Cumulatively considerable” means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects)?</p>   | <input type="checkbox"/> | <input checked="" type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |
| <p>c. Have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly?</p>  | <input type="checkbox"/> | <input checked="" type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |

a. *Does the project have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?*

As discussed in Section 4, *Biological Resources*, the project would not substantially reduce the habitat of a fish or wildlife species; cause a fish or wildlife species population to drop below self-sustaining levels; threaten to eliminate a plant or animal community; or reduce the number or restrict the range of a rare or endangered plant or animal with compliance with Mitigation Measures BIO-1 and BIO-2.

As discussed in Section 5, *Cultural Resources*, the project could result in potentially significant impacts to undiscovered archaeological resources. As discussed in Section 7, *Geology and Soils*, the

project could result in potentially significant impacts to undiscovered paleontological resources. However, implementation of Mitigation Measures CUL-1, GEO-1, and GEO-2 would reduce impacts to a less than significant level.

**LESS THAN SIGNIFICANT WITH MITIGATION INCORPORATED**

- b. *Does the project have impacts that are individually limited, but cumulatively considerable? (“Cumulatively considerable” means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects.)*

Cumulative projects include buildout of the City of San Leandro 2035 General Plan and approved projects within the City of San Leandro. This includes several approved residential, mixed-use, and office/retail developments near the San Leandro Bay Area Rapid Transit Station, manufacturing and industrial developments in the Mulford Gardens and Laqua Manor industrial areas, and two high-growth projects near the Monarch Bay Golf Club and the Bayfair Shopping Center (City of San Leandro 2020). None of these approved projects are located within 1 mile of the project site.

Pursuant to CEQA Guidelines Section 15064(h)(3), cumulative impacts with some of the resource areas have been addressed in the individual resource sections above: Air Quality, Greenhouse Gases, Water Supply, and Solid Waste. As discussed in these sections, impacts (including cumulative impacts) would be less than significant. Some of the other resource areas were determined to have no impact in comparison to existing conditions and therefore would not contribute to cumulative impacts, such as Mineral Resources and Agricultural Resources. As such, cumulative impacts in these issue areas would also be less than significant (not cumulatively considerable). The project would be expected to decrease traffic compared to existing conditions. Cumulative impacts would be less than significant. Therefore, the project’s impacts would not be cumulatively considerable with implementation of the required mitigation measures.

**LESS THAN SIGNIFICANT WITH MITIGATION INCORPORATED**

- c. *Does the project have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly?*

Effects to human beings are generally associated with air quality, noise, traffic safety, geology/soils and hazards/hazardous materials. As discussed in this Initial Study, the project would result in less than significant environmental impacts with respect to these issue areas with mitigation incorporated. Mitigation Measure NOI-1 would reduce potential impacts related to construction noise to a less than significant level. Therefore, the project would not cause substantial adverse effects on human beings, either directly or indirectly. Impacts would be less than significant with mitigation.

**LESS THAN SIGNIFICANT WITH MITIGATION INCORPORATED**

Air Quality and Health Risk Assessment

## MEMO

Date: **January 17, 2020**

To: **Ashley Munce**

From: **Michael Keinath**  
**Sarah Manzano**  
**Michael Howley**

Subject: **CEQA AIR QUALITY AND HEALTH RISK ASSESSMENT FOR A  
NEW DEVELOPMENT AT 903 MANOR BLVD, SAN LEANDRO,  
CALIFORNIA**

---

Ramboll US Corporation (Ramboll) conducted California Environmental Quality Act (CEQA) analyses of greenhouse gases (GHGs), criteria air pollutants (CAPs) and precursors, as well as a health risk assessment (HRA), from construction and operations of a new development consisting of the demolition of an existing bowling alley and the construction of 39 residential units totaling 102,100 square feet (the "Project"). The Project is located at 903 Manor Blvd. in San Leandro, California.

Ramboll assumed construction activities will include demolition, site preparation, grading activities, building construction, architectural coating, and paving. Based on information from the Project Sponsor, the Project will begin construction in 2021, and will require approximately 5,000 cubic yards of soil import. For all other construction information in this assessment, including scheduling, on-road trips, and off-road equipment, Ramboll relied on CalEEMod<sup>1</sup> default values (see **Appendix A**). The Project Area location, as well as surrounding receptors and sensitive receptor locations, is presented in **Figure 1**.

#### **CEQA THRESHOLDS OF SIGNIFICANCE**

The City of San Leandro is the lead agency responsible for Project approval. Per City of San Leandro requirements, Ramboll evaluated the Project in accordance with the current Bay Area Air Quality Management District (BAAQMD) CEQA Guidelines, which were updated in May 2017.<sup>2</sup> These guidelines present methods for evaluating compliance with CEQA as well as thresholds for determining significance. With respect to the Project, the BAAQMD thresholds of significance are as follows:

Ramboll  
201 California Street  
Suite 201  
San Francisco, CA 94111  
USA

T +1 415 796 1950  
F +1 415 398 5812

<sup>1</sup> CALifornia Emissions Estimator MODel (CalEEMod). Version 2016.3.2.

<sup>2</sup> BAAQMD. 2017. California Environmental Quality Act (CEQA) Air Quality Guidelines. May. Available online at: [http://www.baaqmd.gov/~media/files/planning-and-research/ceqa/ceqa\\_guidelines\\_may2017-pdf.pdf?la=en](http://www.baaqmd.gov/~media/files/planning-and-research/ceqa/ceqa_guidelines_may2017-pdf.pdf?la=en)

<b>BAAQMD CEQA Thresholds of Significance</b>			
<b>Criteria Air Pollutants (and Precursors)</b>	<b>Construction- Related Average Daily Emissions (lbs/day)</b>	<b>Operational-Related</b>	
		<b>Average Daily Emissions (lbs/day)</b>	<b>Maximum Annual Emissions (tons/year)</b>
ROGs	54	54	10
NO <sub>x</sub>	54	54	10
PM <sub>10</sub>	82 (exhaust only)	82	15
PM <sub>2.5</sub>	54 (exhaust only)	54	10
PM <sub>10</sub> /PM <sub>2.5</sub> (fugitive dust)	Best Management Practices	None	
CO (local concentration)	None	9.0 ppm (8-hour average) 20.0 ppm (1-hour average)	
GHGs – Projects other than Stationary Sources <sup>3</sup>	None	Compliance with Qualified GHG Reduction Strategy OR 1,100 MT of CO <sub>2</sub> e/yr OR 4.6 MT CO <sub>2</sub> e/SP/yr (residents + employees)	
Risks and Hazards for New Sources and Receptors (Individual Project)	Same as Operational Thresholds	Compliance with Qualified Community Risk Reduction Plan OR Increased cancer risk of >10.0 in a million Increased non-cancer risk of > 1.0 HI (chronic or acute) Ambient PM <sub>2.5</sub> increase: > 0.3 µg/m <sup>3</sup> annual average Zone of Influence: 1,000-foot radius from fence line of source or receptor	

<sup>3</sup> Ramboll assumes that the Project will not be operational prior to 2020 and therefore will evaluate compliance with SB 32 GHG reduction goals for 2030, rather than AB 32 GHG reduction goals for 2020. BAAQMD thresholds are tied directly to AB 32 and statewide emissions reduction goals for 2020. BAAQMD has not yet released an updated 2030 thresholds; however, the Sacramento Metropolitan Air Quality Management District (SMAQMD) recently updated their CEQA guidelines to discuss the change in GHG targets. SMAQMD used the same threshold of 1,100 MT/year for their 2020 target, and has determined that the same threshold is applicable for 2030 GHG targets. As such, we are proposing to continue to use the BAAQMD's 1,100 MT/year for comparison here.

<b>BAAQMD CEQA Thresholds of Significance</b>			
<b>Criteria Air Pollutants (and Precursors)</b>	<b>Construction- Related Average Daily Emissions (lbs/day)</b>	<b>Operational-Related</b>	
		<b>Average Daily Emissions (lbs/day)</b>	<b>Maximum Annual Emissions (tons/year)</b>
Risks and Hazards for New Sources and Receptors (Cumulative Threshold)	Same as Operational Thresholds	Compliance with Qualified Community Risk Reduction Plan  OR  Increased cancer risk of >100 in a million (from all local sources) Increased non-cancer risk of >10 HI (from all local sources) (chronic) Ambient PM <sub>2.5</sub> increase: > 0.8 µg/m <sup>3</sup> annual average (from all local sources)  Zone of Influence: 1,000-foot radius from fence line of source or receptor	
Odors	None	Complaint History – five confirmed complaints per year averaged over 3 years	
Abbreviations: BMP = best management practices MT of CO <sub>2</sub> e/yr = metric tons of carbon dioxide equivalent per year MT CO <sub>2</sub> e/SP/yr = metric tons carbon dioxide equivalent per service population per year HI = hazard index; µg/m <sup>3</sup> = micrograms per cubic meter.			

This Technical Memorandum evaluates Project emissions and health risks and hazards with respect to these BAAQMD thresholds of significance.

In addition, Ramboll also assessed the Project’s consistency with the requirements outlined in Appendix G of the State of California CEQA Guidelines, which were updated in December 2018.<sup>4</sup> The relevant Appendix G checklist questions for air quality and GHG emissions are listed below for reference.

<sup>4</sup> California Natural Resources Agency (CNRA). 2018. Final Adopted Text of the 2018 Amendments and Additions to the State CEQA Guidelines. December. Available online at: [http://resources.ca.gov/ceqa/docs/2018\\_CEQA\\_FINAL\\_TEXT\\_122818.pdf](http://resources.ca.gov/ceqa/docs/2018_CEQA_FINAL_TEXT_122818.pdf)

### III. Air Quality

Where available, the significance criteria established by the applicable air quality management district or air pollution control district may be relied upon to make the following determinations. Would the project:

- a. Conflict with or obstruct implementation of the applicable air quality plan?
- b. Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard?
- c. Expose sensitive receptors to substantial pollutant concentrations?
- d. Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?

### VIII. Greenhouse Gas Emissions

Would the project:

- a. Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?
- b. Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases?

The City of San Leandro uses CEQA significance criteria established by the BAAQMD to determine the significance of a project's air emissions under the Appendix G thresholds.

## **SUMMARY OF RESULTS**

This analysis utilized conservative assumptions, with respect to Project emissions estimation and construction health risk impacts on offsite receptors, as discussed in the sections below. The Project is smaller than screening level size for construction and operational CAP and GHG analysis, and the HRA results are summarized in **Tables 6 and 7**. The Project does not exceed any BAAQMD CEQA significance thresholds, and is consistent with the requirements outlined in Appendix G of the State of California CEQA Guidelines.

## **EMISSIONS METHODS AND RESULTS**

The following sections present the details and results for two analyses:

1. Criteria Air Pollutant (CAP) and Greenhouse Gas (GHG) Emissions from Construction and Operations; and
2. Community Risks and Hazards from Construction and Operations.

### **Construction-Related CAP and GHG Emissions**

During construction activities, emissions of fugitive dust (PM<sub>10</sub> and PM<sub>2.5</sub>) from earth-moving activities and ROG, NO<sub>x</sub>, PM<sub>10</sub>, and PM<sub>2.5</sub> from the exhaust of off-road construction equipment and on-road vehicles from land use projects could potentially contribute to existing violations of ambient air quality standards in the SFBAAB.

In its CEQA Guidelines,<sup>5</sup> BAAQMD provides screening level sizes for land use projects in Table 3-1. As stated in the guidelines, “If a project meets the screening criteria in Table 3-1, a project would result in a less-than-significant impact from criteria air pollutant and precursor emissions.” If a project meets these criteria, a detailed analysis of construction-related CAPs is not required.

The screening level size for construction CAPs for condos/townhouses is 240 dwelling units (DU). Because the Project is 39 DU, it meets the screening criteria. Therefore, the Project would have a less-than-significant impact on construction-related air quality standards.

These results are responsive to Appendix G checklist items III-a, VIII-a, and VIII-b.

### **Operational CAP and GHG Emissions**

During Project operation, emissions of ozone precursors and exhaust PM<sub>10</sub> and PM<sub>2.5</sub> from land use projects could potentially contribute to existing violations of ambient air quality standards in the SFBAAB; these emissions would primarily be from mobile sources (i.e., vehicle trips). Other common sources of emissions include energy use from natural gas, consumer products, architectural coatings, and landscape equipment.

In its CEQA Guidelines,<sup>6</sup> BAAQMD provides screening level sizes for land use projects in Table 3-1. As stated in the guidelines, “If a project meets the screening criteria in Table 3-1, a project would not result in the generation of operational-related criteria air pollutants and/or precursors that exceed the Thresholds of Significance.” If a project meets these criteria, a detailed analysis of operational-related CAPs and GHGs is not required.

The screening level size for operational CAPs for condos/townhouses is 451 dwelling units (DU), and the screening level size for operational GHGs is 78 DU. Because the Project is 39 DU, it meets the screening criteria.

Therefore, the Project meets the screening criteria and would not result in the generation of operational-related criteria air pollutants and/or precursors that exceed the Thresholds of Significance. The Project would have a less-than-significant impact on operational air quality standards. These results are responsive to Appendix G checklist items III-a, VIII-a, and VIII-b.

## **LOCAL COMMUNITY RISK AND HAZARD IMPACTS**

### **Local Carbon Monoxide (CO) Impacts**

According to the 2017 BAAQMD CEQA Guidelines, the Project would result in less-than-significant localized CO concentrations if it meets the following criteria:

1. Is consistent with county and local congestion management plans, and
2. Does not increase traffic volumes at affected intersections to more than 24,000 vehicles per hour.

Based on the traffic count data provided by the City of San Leandro, Manor Blvd has an annual average daily traffic (AADT) volume of 9,800 vehicles, and nearby Farnsworth Blvd has an AADT of 8,600<sup>7</sup>. Per CalEEMod® defaults (see **Appendix A**), the Project is expected to generate 232 daily trips. Even if all of these trips occurred in the same hour through the same intersection, they would not exceed the screening threshold. Thus, operational impacts from Project CO emissions would be less than significant.

<sup>5</sup> California Environmental Quality Act Air Quality Guidelines, BAAQMD, May 2017.

<sup>6</sup> California Environmental Quality Act Air Quality Guidelines, BAAQMD, May 2017.

<sup>7</sup> Phone call with City of San Leandro, Engineering & Transportation, Land Use Division. Traffic counts reported in December 2016.

## Toxic Air Contaminant (TAC) Emissions

The TAC emissions associated with the Project construction were calculated with the following assumptions and exceptions:

1. Diesel Particulate Matter (DPM): DPM emissions were used to evaluate the cancer risk and non-cancer chronic HI from Project construction. In this analysis, both onsite (i.e., construction equipment) and local offsite (i.e., construction mobile sources) PM<sub>10</sub> exhaust emissions<sup>8</sup> were calculated as DPM and modeled (as discussed in the next section) within the Project boundary. This analysis also conservatively assumed the small fraction of non-diesel PM<sub>10</sub> (i.e., PM<sub>10</sub> emissions from gasoline fueled passenger vehicles) was DPM, which has greater human health impacts. All off-road construction equipment was assumed to be certified as Tier 4 Final to minimize impacts on the surrounding community.
2. PM<sub>2.5</sub>: Exhaust PM<sub>2.5</sub> emissions were used to evaluate the PM<sub>2.5</sub> concentration due to the Project construction. The modeled emissions were calculated using the same conservative assumptions as the DPM calculation.

Emissions are based on a combination of CalEEMod default assumptions and Project specific information. The CalEEMod default equipment list and phase lengths were used. The Project is anticipated to start as soon as April 2021, so the default construction phases were set to begin April 1, 2021. The Project Sponsor indicated the Project will require approximately 5,000 cubic yards of soil import. This was also incorporated into the CalEEMod analysis, which would affect hauling trips. All other trips were assumed to be consistent with CalEEMod defaults.

All off-road construction equipment was assumed to have Tier 4 Final engines. The Project is adjacent to residences, so the Project Sponsor made a commitment to use the cleanest engines to reduce impact on the surrounding community. This will be a contractual requirement for all construction contractors on the Project, so was analyzed as part of the Project analysis.

**Appendix A** details all assumptions in the emissions modeling.

Total modelled emissions are presented in Table 2, as total PM<sub>10</sub> and PM<sub>2.5</sub> from construction.

TAC emissions from operation were not estimated. BAAQMD recommends analysing TAC emissions from roadways with over 10,000 vehicles per day. As discussed above, per CalEEMod® defaults (see **Appendix A**), the Project is expected to generate 232 daily trips. Therefore, the Project would not generate 10,000 vehicles per day, so TAC emissions from roadways is not needed. The Project also does not contain other significant sources of TAC emissions.

## Construction Health Risk Assessment

Ramboll analyzed Project construction-related risks by estimating ambient air concentrations of DPM and PM<sub>2.5</sub>. To estimate air concentrations of DPM and PM<sub>2.5</sub>, Ramboll used AERMOD, a steady-state Gaussian plume model developed by USEPA for regulatory applications. AERMOD requires emission source locations and release parameters, receptor locations, and processed meteorological data. The construction source parameters are shown in **Table 3**. Ramboll used five years of meteorological data from the Hayward Airport, which was the nearest dataset available to the Project.

In February 2015, OEHHA released the updated Air Toxics Hot Spots Program Guidance Manual for Preparation of Health Risk Assessments (OEHHA 2015), which combines information from previously-

---

<sup>8</sup> Local offsite (mobile source) emissions were conservatively calculated by including CalEEMod® on-road emissions for the entire default trip length in the screening model.

released and adopted technical support documents to delineate OEHHA’s revised risk assessment methodologies based on current science. The BAAQMD has issued HRA Guidelines formally adopting the OEHHA 2015 Guidance Manual.<sup>9</sup> This analysis followed the recommended methodology from the 2015 OEHHA Hot Spots Guidance. Ramboll conservatively evaluated Project impacts due to construction emissions using default exposure assumptions for a resident child from OEHHA (2015) unless otherwise noted.<sup>10</sup> The resident child scenario assumes a much higher daily breathing rate and age-sensitivity factor (ASF)<sup>11</sup> than other sensitive receptor populations and therefore is the most conservative scenario to evaluate for this analysis. The exposure parameters used to estimate excess lifetime cancer risks for a resident child are presented in **Table 4**.

The dose estimated for each exposure pathway is a function of the concentration of a chemical and the intake of that chemical. The intake factor for inhalation,  $IF_{inh}$ , can be calculated as follows:

$$IF_{inh} = \frac{DBR * FAH * EF * ED * CF}{AT}$$

Where:

- $IF_{inh}$  = Intake Factor for Inhalation ( $m^3/kg\text{-day}$ )
- DBR = Daily Breathing Rate ( $L/kg\text{-day}$ )
- FAH = Fraction of Time at Home (unitless)
- EF = Exposure Frequency ( $days/year$ )
- ED = Exposure Duration (years)
- AT = Averaging Time (days)
- CF = Conversion Factor, 0.001 ( $m^3/L$ )

The chemical intake or dose is estimated by multiplying the inhalation intake factor,  $IF_{inh}$ , by the chemical concentration in air,  $C_i$ . When coupled with the chemical concentration, this calculation is mathematically equivalent to the dose algorithm given in the OEHHA Hot Spots guidance (Cal/EPA 2003).

The toxicity assessment characterizes the relationship between the magnitude of exposure and the nature and magnitude of adverse health effects that may result from such exposure. This HRA evaluated theoretical exposures to TACs for two categories of potential adverse health effects, cancer and non-cancer endpoints. Toxicity values used to estimate the likelihood of adverse effects occurring in humans at different exposure levels are identified as part of the toxicity assessment component of a risk assessment.

Excess lifetime cancer risk and chronic hazard quotient (HQs) calculations for Project construction utilized the toxicity values for DPM. Toxicity values for DPM (Cal/EPA 2016) are as presented in **Table 5**.

<sup>9</sup> BAAQMD. 2016. Proposed Health Risk Assessment Guidelines. Air Toxics NSR program. January. Available at: [http://www.baaqmd.gov/~media/files/planning-and-research/rules-and-regs/workshops/2016/reg-2-5/hra-guidelines\\_clean\\_jan\\_2016-pdf.pdf?la=en](http://www.baaqmd.gov/~media/files/planning-and-research/rules-and-regs/workshops/2016/reg-2-5/hra-guidelines_clean_jan_2016-pdf.pdf?la=en)

<sup>10</sup> BAAQMD. 2010. BAAQMD Air Toxics NSR Program Health Risk Screening Analysis (HRSA) Guidelines. January.

<sup>11</sup> Ibid.

As shown in **Table 4**, an ASF of 10 for children was applied to the resident child, assuming the resident child receptors are between birth to age two.<sup>12</sup>

Cancer risk and chronic HI were calculated from ambient annual concentrations using intake factors, cancer potency factors, and chronic reference exposure levels calculated consistent with the 2015 OEHHA Hot Spots Guidance<sup>13</sup> and 2010 BAAQMD guidance.<sup>14</sup>

As shown in **Table 6**, the maximum cancer risk from construction activities is calculated to be 5.9 in 1 million, compared to a threshold of 10 in 1 million. Construction activities would also result in a non-cancer hazard index of 0.01 (threshold of 1.0), and maximum PM<sub>2.5</sub> concentration of 0.03 µg/m<sup>3</sup> (threshold of 0.3 µg/m<sup>3</sup>). These results are all below the BAAQMD thresholds of significance; thus, health risk impacts associated with construction of the Project are less than significant. These conclusions are responsive to Appendix G checklist item III-c.

### **Odor**

The Project is a residential development and hence is not expected to create objectionable odors and major sources of odors are not within the BAAQMD screening distances, so the Project is not expected to create objectionable odors affecting a substantial number of people.

### **Cumulative Health Risk Assessment**

In accordance with BAAQMD CEQA guidelines, Ramboll conducted a cumulative HRA for offsite sensitive receptors, responsive to checklist item III-b. Given the proximity of the construction MEIR to the Project, this cumulative assessment also applies to the new onsite sensitive receptors. The cumulative assessment tabulates the impact of Project-related construction and operational risks plus existing offsite sources (stationary and mobile) at the maximum offsite sensitive receptor location for construction and operation, respectively. The evaluation requires the identification of any stationary and mobile sources within 1,000 feet of the Project boundary. In addition to the evaluation of each single source, the combined health risk from all toxic air contaminant (TAC) and PM<sub>2.5</sub> sources are evaluated.

Sources evaluated in the cumulative health risk assessment include any BAAQMD permitted stationary source, roadways with over 10,000 vehicles per day, and any other major source of emissions within the zone of influence such as railways. The BAAQMD provides tools with conservative estimates of impacts from these sources, including a stationary source tool, railway screening tool, major roadway screening tool, and roadway screening tables. There are not any stationary sources within the zone of influence recommended by BAAQMD. BAAQMD's major roadway screening tool includes impacts from all roadways with daily traffic above 30,000 vehicles per day. The roadway screening tables should be used for any roadway between 10,000 vehicles per day and 30,000 vehicles per day. There are not any roadways within the zone of influence that fall within this range of traffic volumes. To be conservative, impacts from Manor Boulevard, which is 9,800 vehicles per day, was included in this analysis.

The major roadway screening tool and railway screening tool were used to estimate the health impacts from all major roadways and railways and combined with the impacts from all other sources at the operational MEISR.

---

<sup>12</sup> Ibid.

<sup>13</sup> Cal/EPA. 2003. The Air Toxics Hot Spots Program Guidance Manual for Preparation of Health Risk Assessments. Office of Environmental Health Hazard Assessment. August.

<sup>14</sup> BAAQMD. 2010. Air Toxics NSR Program Health Risk Screening Analysis (HRSA) Guidelines. January

The combined impact from all the sources results in a cancer risk of 31 in 1 million at the MEISR. The combined non-cancer hazard index is 0.007, and combined maximum PM<sub>2.5</sub> concentration is 0.36 µg/m<sup>3</sup>. Details of each source included in the cumulative analysis are presented in **Table 7**. These results are all well below the BAAQMD cumulative thresholds of significance of 100 in one million; thus, the cumulative health risk impacts associated with the Project are less than significant. These conclusions are responsive to Appendix G checklist item III-b.

### **CLOSING**

The analysis presented above represent a conservative estimate of the controlled CAP, GHG, TAC, and health impacts from construction and operation of the proposed Project. The Project does not exceed any BAAQMD CEQA significance thresholds, and is consistent with the requirements outlined in Appendix G of the State of California CEQA Guidelines.

Biological Assessment

**903 MANOR BOULEVARD  
BIOLOGICAL ASSESSMENT**

Zentner Planning and Ecology

Project:  
1110 DRH

Date issued:  
July 2019

Revised:  
January 2020

# 903 MANOR BOULEVARD BIOLOGICAL ASSESSMENT

## SUMMARY

### Introduction

This report assesses the biological and associated regulatory issues relevant to the potential development of the 903 Manor Boulevard property (described here as the project site or property). The site is located at 903 Manor Boulevard in a heavily urbanized part of the City of San Leandro in Alameda County.

Zentner Planning and Ecology conducted a site assessment on July 3, 2019 and a literature review including a search of the California Natural Diversity Database (CNDDDB) and other state and federal databases. The following describes the results of these analyses and recommended mitigation measures.

**Photo 1:** View looking north from the southwest side of the property. The bowling alley, which dominates the northern part of the site, is shown in the photo background. July 2019.

### Project Synopsis

As shown in Photo 1, the property consists of a large bowling alley and the adjoining asphalt parking area. The great majority of the site is either developed or heavily disturbed. The only vegetation on-site consists of a variety of trees and shrubs on the site's perimeter. Further, the

site is relatively isolated from other biotic resources by the surrounding homes and other improvements. Development of the approximately 2.1-acre property will include the demolition of the bowling alley and associated parking lot and the construction of 39 multi-family townhomes, consisting of 6 buildings totaling 74,624 square feet.

### **Special Status Habitats**

No special status habitats, including wetlands or other waters regulated by federal or state agencies, were found on the property. The California Natural Diversity Database (CNDDDB) records states that there are two special status habitats within 5 miles of the property: valley needlegrass grassland and northern coastal salt marsh. There are an additional two special status habitats located in the 9 USGS 7.5 minute Quads that include and surround the project site: serpentine bunchgrass and northern maritime chaparral. None of these habitats are present on the property. Accordingly, no impacts to wetlands or other state- or federally-regulated habitats will occur and no permits from the relevant state or federal agencies would be required.

As well, the site does not connect to any wildlife movement corridors, a result of the urban/suburban character of the surrounding lands. Accordingly, development is not likely to interfere with wildlife movement.

### **Special Status Species**

The California Natural Diversity Data Base (CNDDDB) contains records of 27 special status animals and 17 special status plants within a 5-miles radius of the site. An additional 33 special status animal species and 41 special status plant species have been recorded in the 9 US Geological Survey (USGS) 7.5 minute quadrangles that include and surround the project site. None of these special status species were observed during the site assessment and none are likely to occur on-site. Based on the site surveys and lack of habitat on-site, development does not create the potential for "take" of a listed species as defined by the federal Endangered Species Act (FESA) or impacts to other State-or federally recognized species.

The site, however, contains potential habitat for nesting raptors and migratory birds in the form of the trees and large shrubs on the site perimeter. Nesting raptors and migratory bird nests are protected by the federal Migratory Bird Treaty Act and California Resources Code (CDFW) and impacts to these species or their nest could be significant if they occurred. The bowling alley also could provide habitat for roosting bats, which are protected under State regulations.

### **Potential Impacts and Recommended Mitigation**

The large shrubs and trees on the site perimeter provide some potential habitat for nesting raptors and other birds. Site development could affect these species. If project construction commences during the nesting/breeding season of migratory bird species or raptors (typically February through August in the project region), a qualified biologist should conduct a

preconstruction survey of the project site and surrounding 150 feet for nesting/breeding birds and 500 feet for nesting/breeding raptors within 14 days prior to the start of construction activities. If nesting birds or raptors are found on site or in the surrounding buffer, additional mitigation measures during construction may be necessary.

The bowling alley could provide habitat for special status bats. Prior to building demolition, a roosting bat survey should be completed to determine if bats are present. The survey should examine all buildings, structures, trees, and shrubs that will be removed as part of the project. If any active bat roosts are present, additional mitigation measures during construction may be necessary.

## **I. INTRODUCTION**

### **A. Purpose**

This report is intended to assess the environmental conditions of the 903 Manor Boulevard site and to determine whether there special status habitats or species on-site or other biological resources and to identify appropriate mitigation for impacts to those resources, should they occur.

### **B. Methodology**

Biological resources in the project area and region were identified though a site assessment and a literature review and background research completed by Zentner Planning and Ecology in July of 2019.

#### *Site Analyses*

Zentner Planning and Ecology conducted a site assessment on July 3, 2019 2019 between 8am and 10am. At the time of the survey the weather was warm with clear skies and little to no wind. The timing of the survey allowed for clear viewing of all site features. The timing was appropriate for identifying potential special status species given the nature and condition of the site.

Walking transects of the entire property were completed to visually assess all site features. The assessment included identification of the dominant habitat types and vegetation and a survey for special status habitats, plants and animals. All buildings, trees, and other structures on the property were closely examined, using binoculars where required (the taller shrubs and trees for example).

#### *Literature Review*

The literature review provided information on general biological resources, rare or otherwise special habitats, and on the distribution and habitat requirements of plant and animal species ("taxa") that have been reported from or are suspected to occur in the project vicinity. Information was gathered from the CNDDDB that compiles records of species occurrences from California Department of Fish and Wildlife (CDFW), the U.S. Fish and Wildlife Service (USFWS), and the California Native Plant Society (CNPS). As well, aerial photographs, topographic maps, and soil survey maps were consulted in addition to the USFWS Information for Planning and Consultation (IPaC), and the California Native Plant Society (CNPS) Inventory of Rare and Endangered Plants for the 9 USGS 7.5 minute topographic quads at and surrounding the project site. These files were reviewed to determine whether special status habitats or species had been observed in the area in the past.

## II. SETTING

### A. Location

The Manor Boulevard property is located in the City of San Leandro in Alameda County (**Figure 1**). The approximately 2.1-acre, rectangular-shaped property is located north of and adjacent to Manor Boulevard and approximately 0.25 mile south of Interstate 880. The property is located in the San Leandro 7.5-minute quad within the San Francisco Bay watershed (HUC 8 18050004).

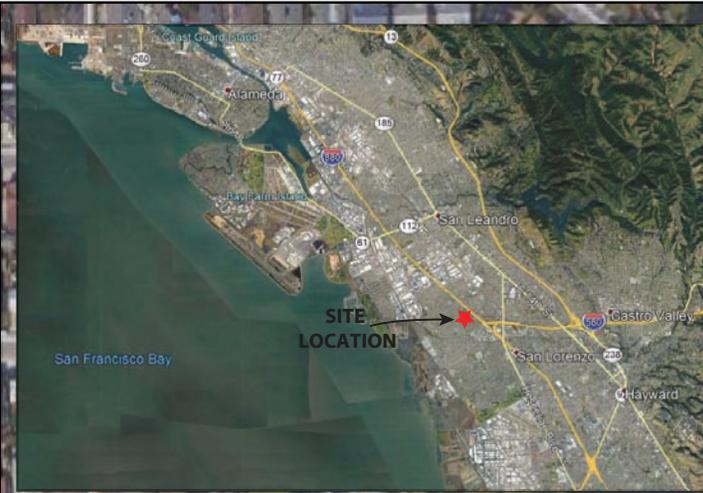

The property is sited within a highly urbanized area with commercial properties to the west and single- and multi-family residential units in all other directions. The region has been heavily developed and contains few to no undeveloped “natural” landscapes. Washington Manor Park represents the largest open space in the immediate area. It is located approximately 0.1-mile north of the property and has been developed with a swimming pools, tennis courts, baseball fields, grass turf and walking trails. Estudillo Creek passes approximately 0.15 mile east of the property, though in this region the Creek has been channelized within a concrete ditch and it is bounded by residential properties on either side.

### B. Site Description

The Manor Boulevard property is almost completely flat. The southern half of the property is an asphalt parking lot and the northern half consists of a bowling alley bounded by a narrow strip of heavily disturbed access ways.

**Photo 2:** View looking north across the parking lot and towards the bowling alley from the southeast corner of the property. Several stunted cypress trees are visible along the right side of the photo. July 2019.

# Manor Boulevard San Leandro, California

**FIGURE 1  
 LOCATION  
 MAP**

**ZENTNER**  
 Planning & Ecology

120A Linden Street, Oakland, CA 94607  
 Phone: 510.622.8110 Fax: 510.622.8116

Five stunted cypress trees (*Hesperocyparis* sp.) are growing along the eastern edge of the parking lot; these are the only trees present on the property. These trees have a diameter at breast height (DBH) ranging from 7 to 12 inches and have a maximum height of approximately 8 feet. A short juniper (*Juniperus* sp.) hedge lies between the parking lot and the Manor Boulevard sidewalk along the southern edge of the property and a robust nightshade shrub (*Solanum* sp.) is growing in the property's southeast corner. There are no other trees or shrubs on the property.

The bowling alley consists of a large building with a shallowly pitched roof. The building's exterior has a mixture of facades including brick, wood, stucco, and cinder block and is almost fully sealed, though there were few (less than 5) small openings around vents and pipes that could potentially provide access for wildlife. As well, the roof of the building contains a number of vents and other features that could potentially provide cover or access for wildlife. The landowner has made some effort, including screening openings, to keep wildlife out of the building.

**Photo 3:** View looking east across the front of the bowling alley. July 2019.

A narrow strip of dirt provides access around the bowling alley. This strip consists of heavily compacted and disturbed dirt that has been recently and closely mowed; little to no vegetation remains. What little vegetation exists consists of common ruderal species including bristly ox tongue (*Helminthotheca echioides*), foxtail barley (*Hordeum murinum*), ripgut brome (*Bromus*

*diandrus*), and geranium (*Geranium molle*). This area appears to be used for storage of the trash and recycling facilities as well as to store other small items.

**Photo 4:** View looking east across the back side of the bowling alley and along the northern edge of the property. July 2019.

### **C. Wildlife**

The primary wildlife observed on the property consisted of a number of birds that were using the building and surrounding trees for cover, foraging, and possibly nesting. No active bird nests were observed, and there is little nesting habitat on the property. However, the site perimeter and building contains some potential nesting habitat and the surrounding properties contain a number of trees that provide potential nesting habitat.

Other wildlife that may use or pass through the site consists of wildlife that are adaptable to heavily urbanized conditions. These would include western fence lizard (*Sceloperus occidentalis*), striped skunk (*Mephitis mephitis*), raccoon (*Procyon lotor*), and opossum (*Didelphis virginiana*).

### **III. SPECIAL STATUS HABITATS**

Special status habitats include wetlands, creeks, “other waters” as regulated by federal and state agencies and other habitats recognized as important by the CNDDDB, e.g. native grasslands. Wildlife movement corridors, although not a habitat *per se*, are also considered in this section of the analysis.

#### **A. Wetlands and Waters**

##### **1. Jurisdictions**

As defined by the US Army Corps of Engineers (Corps), “wetlands” are areas periodically or permanently saturated by surface or groundwater and typically support vegetation adapted to life in saturated (hydric) soil. Wetlands are recognized as important features on a regional and national level due to their high inherent value to fish and wildlife, use as storage areas for storm and floodwaters, promotion of groundwater recharge, and their water filtration and purification functions. “Other waters” include tributaries or drainage ditches which exhibit perennial or ephemeral flow to a navigable waterway, wetland, or other significant water feature. Other waters may not necessarily be wetlands. The Regional Water Quality Control Board (RWQCB) uses the same three parameters, although they may limit the applicability of at least one parameter in certain conditions.

##### **2. Wetland and Other Waters Delineation Methods**

Technical standards for delineating wetland and other waters have been developed by the Corps in its Wetlands Delineation Manual (Army Corps of Engineers, Environmental Laboratory, Technical Report Y-87-1, U.S. Army Engineer Waterways experiment Station Vicksburg, Miss., 1987 [“Delineation Manual”] and other regulations.

Wetlands are defined by the Corps Section 404 regulations as: “Those areas that are inundated or saturated by surface or groundwater at a frequency and duration sufficient to support, and that under normal circumstances do support, a prevalence of vegetation typically adapted for life in saturated soil conditions.” Thus to be designated a wetlands according to Corps regulation a site must have a predominance of hydrophytic vegetation, evidence of hydric soils, and wetland hydrology under normal circumstances.

Other waters are defined based on water elevations and geomorphic features. In freshwater conditions, the boundary between uplands and other waters is the ordinary high water mark, which is roughly equivalent to the mean annual flood line. In tidal conditions, the boundary is set by the high tide line, roughly equivalent to mean high water.

### **3. Wetland and Other Waters Survey Results**

A delineation of the site was completed by Zentner Planning and Ecology on July 3, 2019. No wetlands or waters of the U.S./State were found on the site. The site is almost completely developed and does not contain hydrophytic vegetation or hydric soils, nor was any evidence of ponding or wetland hydrology observed.

#### **B. Other Special Status Habitats**

CNDDDB lists two other special status habitats that occur within 5 miles of the property: northern coastal salt marsh and valley needlegrass grassland. An additional two special status habitats have been recorded in the 9 USGS 7.5 minute Quads that include and surround the project site: serpentine bunchgrass and northern maritime chaparral. None of these habitats occur on the project property.

Northern coastal saltmarsh occurs where there is mixing of saltwater and freshwater over a shallow substrate, resulting in the growth of characteristic salt marsh plants. The property is inland with no saltwater nearby; no areas within the property meet the definition of northern coastal salt marsh.

Valley needlegrass grassland habitat is dominated by perennial grasses such as purple needlegrass (*Stipa pulchra*). It generally occurs on fine, often clay soils that are moist and waterlogged in the winter and dry in the summer. The property has been heavily modified and no needlegrass species were observed on the property. This habitat is not present on the property.

Serpentine bunchgrass habitat occurs in areas with serpentine soils and contains native bunchgrass species such as purple needlegrass, pine bluegrass (*Poa secunda*) and small fescue (*Vulpia microstachys*), and squirrel tail grass (*Elymus elymoides*). Northern maritime chaparral habitat contains dense shrub cover generally composed of several species of manzanita, lilac, and chamise. Neither habitat occurs on-site.

#### **C. Wildlife Movement Corridors**

Wildlife movement corridors are generally described as pathways or habitat linkages that connect discrete areas of natural open space otherwise separated or fragmented by topography, changes in vegetation, and other natural or human induced factors such as urbanization. The fragmentation of natural habitat through development creates isolated "islands" of native-dominated vegetation that may not provide sufficient area or resources to accommodate sustainable populations for a number of species and thus, adversely affects both genetic and species diversity. Corridors often partially or largely eliminate the adverse effects of fragmentation by 1) allowing animals to move between remaining habitats to replenish depleted populations and increase the gene pool available; 2) providing escape routes from

fire, predators, and human disturbances, thus reducing the risk that catastrophic events (such as fire or disease) will result in population or species extinction; and 3) serving as travel paths for individual animals moving throughout their home range in search of food, water, mates, and other needs, or for dispersing juveniles in search of new home ranges.

The property does not contain any areas of native vegetation or natural landscape. It is also isolated from regional open spaces, such as the tidal and non-tidal marshes along SF Bay, or local creeks, such as Estudillo Creek, which is channelized and some distance away. Accordingly, the site is not part of a wildlife corridor and its development will not impact local or regional wildlife corridors.

## **IV. SPECIAL STATUS SPECIES**

### **A. Special Status Species**

#### **1. Definitions**

Special-status species are plants and animals that are legally protected under the California and Federal Endangered Species Acts (CESA and FESA, respectively) or other regulations, and species that are considered rare by the scientific community (for example, the California Native Plant Society [CNPS]). Special-status species are more specifically defined as:

- Plants and animals that are listed or proposed for listing as threatened or endangered under the CESA (Fish and Game Code §2050 et seq.; 14 CCR §670.1 et seq.) or the FESA (50 CFR 17.12 for plants; 50 CFR 17.11 for animals; various notices in the Federal Register [FR] for proposed species);
- Plants and animals that are candidates for possible future listing as threatened or endangered under the FESA (50 CFR 17; FR Vol. 64, No. 205, pages 57533-57547, October 25, 1999); and under the CESA (California Fish and Game Code §2068);
- Plants and animals that meet the definition of endangered, rare, or threatened under the California Environmental Quality Act (CEQA) (14 CCR §15380) that may include species not found on either State or Federal Endangered Species lists;
- Plants occurring on Lists 1A, 1B, 2, 3, and 4 of CNPS' Electronic Inventory (CNPS 2015). The California Department of Fish and Wildlife (CDFW) recognizes that Lists 1A, 1B, and 2 of the CNPS inventory contain plants that, in the majority of cases, would qualify for State listing, and CDFW requests their inclusion in EIRs. Plants occurring on CNPS Lists 3 and 4 are "plants about which more information is necessary," and "plants of limited distribution," respectively (CNPS 2015). Such plants may be included as special-status species on a case by case basis due to local significance or recent biological information;
- Migratory non-game birds of management concern listed by U.S. Fish and Wildlife Service (Migratory Non-Game Birds of Management Concern in the United States: The list 1995; Office of Migratory Bird Management; Washington D.C.; Sept. 1995);
- Animals that are designated as "species of special concern" by CDFW (2010);
- Animal species that are "fully protected" in California (Fish and Game Codes 3511, 4700, 5050, and 5515).

## 2. Special Status Species Potentially Occurring Near the Property

According to the CNDDDB, a total of 27 special status animal species and 17 special status plant species are known to occur in the general region of the project, that is, within a 5-mile area around the property (**Figures 2 and 3**). An additional 33 special status animal species and 41 special status plant species have been recorded in the 9 USGS Quads surrounding and including the project site.

None of these species have been observed or are likely to occur on the property. The species with recorded observations within 5-miles around the property are discussed below. The species with recorded observations within the surrounding 9 USGS Quads are discussed in **Tables 1 and 2**. The CNDDDB species list is provided in **Appendix A**.

### a. Animals

As stated above, there are 27 special status animal species with occurrences within 5 miles of the property (Figure 2). Seven of these species are listed under the FESA and would be protected from “take” under the FESA. The remaining 20 special status species are considered “special status” for purpose of CEQA analysis, but are not protected under the FESA.

None of these have been observed on or are likely to occur on the property or on the adjacent properties. These species are listed below and the reason they are unlikely to occur is provided.

There are an additional 33 special status animal species with recorded observations within the 9 USGS Quads including and surrounding the project site (Table 1). Six of these species would be protected from “take” under the FESA: California red-legged frog (*Rana draytonii*), California tiger salamander (*Ambystoma californiense*), Myrtle’s silverspot butterfly (*Speyeria zerene myrtleae*), San Francisco garter snake (*Thamnophis sirtalis tetrataenia*), Steel head – central California coast DPS (*Oncorhynchus mykiss* irideus pop. 8), and tidewater goby (*Eucyclogobius newberryi*). The remaining 27 species are considered “special status” for purpose of CEQA analysis, but are not protected under the FESA. All of these species are discussed in Table 1 with the reasons that they are unlikely to occur within the property.

### Species within 5 miles of the Property Protected under the FESA:

Salt-marsh harvest mouse (*Reithrodontomys raviventris*)

Habitat for this mouse consists of marshes, swamps, and wetlands that contain dense stands of pickleweed (*Salicornia* sp.). The property contains no suitable habitat for this species, therefore, there is no potential for significant impact or take, as defined by the FESA, of this species with project implementation.

Alameda whipsnake (*Masticophis lateralis euryxanthus*; AWS)

Core habitat for the Alameda whip snake is generally open-canopied shrub communities, including coastal scrub and chaparral, often with rock outcroppings on

PROJECT: 1110 DRH Manor Drive

FILE: D:\Graphic Designer\My Documents\PROJECTS\1101-1199\1110 DRH Manor Drive\Adobe\CNDDDB\Vegetation.ai

SOURCE: CNDDDB shapefiles June 2019, ERSI USGS Satellite Image

south-, southeast-, east-, and southwest-facing slopes (Swaim 1994). Rock outcrops are an important element of its habitat. The species may also be found less frequently in oak woodland/savanna and grassland areas adjoining core habitats, especially where these areas are used as movement corridors between core habitats. Typical plant species within occupied habitats of scrub and chaparral communities include California sage, coyote brush, poison oak - and sticky monkey flower.

The property is almost fully developed and does not contain any suitable habitat for this species. As well, there are not any rocky outcrops or open-canopied shrub habitats in the surrounding area. The project property is located within an urban environment that would not be used by the species, therefore, there is no potential for significant impact or take, as defined by the FESA, of this species with project implementation.

California least tern (*Sternula antillarum browni*)

The California least tern usually lives in colonies of 30-50 nesting pairs. They nest in bare or sparsely vegetated flat substrates, relatively free from disturbances. Nesting today is limited to colonies in San Francisco Bay, Sacramento River delta, and areas along the coast from San Luis Obispo County to San Diego County. The property does not contain suitable habitat for this species, therefore, there is no potential for significant impact or take, as defined by the FESA, of this species with project implementation.

California Ridgeway's rail (*Rallus obsoletus obsoletus*)

Habitat includes salty and brackish water marshes with pickleweed and cordgrass. The property contains no suitable habitat for this species, therefore, there is no potential for significant impact or take, as defined by the FESA, of this species with project implementation.

Western snowy plover (*Charadrius alexandrinus nivosus*)

The western snowy plover nests above the high tide line on coastal beaches, sand pits, dune-backed beaches, sparsely-vegetated dunes, beaches at creek and river mouths and salt pans at lagoons and estuaries. The property contains no suitable habitat for this species, therefore, there is no potential for significant impact or take, as defined by the FESA, of this species with project implementation.

Longfin smelt (*Spirinchus thaleichthys*)

Habitat includes nearshore waters, estuaries, and lower portions of freshwater streams (Garwood 2017). The property contains no suitable habitat for this species, therefore, there is no potential for significant impact or take, as defined by the FESA, of this species with project implementation.

Bay checkerspot butterfly (*Euphydryas editha bayensis*)

This species is restricted to native grasslands on outcrops of serpentine soil in the San Francisco Bay area. The property does not contain suitable habitat for this species. As well, the species has not been observed at the property and the only local record is listed

as extirpated. Therefore, there is no potential for significant impact or take, as defined by the ESA, of this species to occur with project implementation.

### **Other Special Status Species within 5 Miles of the Property not Protected under the ESA:**

#### Hoary bat (*Lasiurus cinereus*)

This species typically roosts in trees and sometime tree cavities such as woodpecker holes. Roosts are typically 3 to 5 meters above the ground. The property is almost fully developed and does not contain any trees or tree cavities that are capable of supporting this species. The species is therefore unlikely to occur on the property.

#### Pallid bat (*Antrozous pallidus*)

This species occurs throughout California in a variety of habitats including low desert, oak woodland and coastal redwood forests. They are primarily a crevice roosting species and seek out rock crevices, old buildings, bridges, caves, mines and hollow trees. The building on the property provides marginal habitat for this species, however, this species has not been observed on the property, not have signs of bats been observed. The species is unlikely to occur on the property but prior to building demolition a pre-construction roosting bat survey should be conducted to ensure no bats are present.

#### Salt-marsh wandering shrew (*Sorex vagrans halicoetes*)

This shrew is found in small remnant stands of salt marsh along the southern arm of the San Francisco Bay in San Mateo, Santa Clara, Alameda, and Contra Costa Counties. The property does not contain habitat for this species.

#### Western mastiff bat (*Eumops perotis californicus*)

This bat occurs in open, semi-arid to arid habitats including conifer and deciduous woodlands, coastal scrub, annual and perennial grasslands, palm oases, chaparral, desert scrub, and urban environments. It roosts in crevices in rock outcrops and buildings (Zeiner 1988). The bowling alley building provides marginally suitable habitat for this species, however, it has not been observed on the property, nor have signs of bats been observed. The species is, therefore, unlikely to occur on the property but, prior to building demolition a pre-construction roosting bat survey should be conducted to ensure no bats are present.

#### Foothill yellow-legged frog (*Rana boylei*)

Habitat for this frog includes partially-shaded, shallow streams and riffles with a rocky substrate in a variety of habitats. The only record of this species within 5 miles of the property is from 1960 and is listed as "possibly extirpated." As well, the property does not contain any wetted areas and it is outside of the current range of this species. The species is unlikely to occur on the property.

American peregrine falcon (*Falco peregrinus anatum*)

This species nests near wetlands, lakes, river or other water on cliffs, banks, dunes, mounds, and human-made structures. The property is not near water, does not include cliffs or similar features and therefore does not contain suitable habitat for this species.

Alameda song sparrow (*Melospiza melodia pusillula*)

The species can be found on tidal salt marshes on the fringes of South San Francisco Bay. The property does not contain suitable habitat for this species.

Burrowing owl (*Athene cunicularia*)

This bird is a small ground-dwelling owl that lives in open, dry grasslands, agricultural and range lands, and desert habitats associated with burrowing mammals. The owl typically nests in old ground squirrel (*Spermophilus beecheyi*) or similar burrows for breeding, wintering, foraging, and migration stopovers. The property has been fully developed and does not contain suitable habitat for this species.

Black skimmer (*Rynchops niger*)

The species is primarily found in bays, estuaries, lagoons, mudflats, beaches, shell banks, spoil islands, and coastal marshes (Gochfeld 1994). The species is highly social and breeds in colonies on beaches and islands, often with terns and gulls. The property does not contain suitable habitat for this species.

California black rail (*Laterallus jamaicensis coturniculus*)

Habitat consists of brackish marshes, marshes and swamps, salt marshes, and wetlands. The property contains no suitable habitat for this species.

Cooper's hawk (*Accipiter cooperii*)

Habitat consists of cismontane woodland, riparian forests, riparian woodland, and upper montane coniferous forest. The majority of the property has been developed and there are no large trees that could be utilized for nesting by the species. As well, the area around the property is heavily developed and unlikely to support this bird. The species is therefore unlikely to occur at the property.

Great blue heron (*Ardea Herodias*)

This species is a colonial nester. Rookery sites are in close proximity to foraging areas which include marshes, lake margins, tide-flats, rivers and stream, and wet meadows. The property does not contain suitable habitat for this species.

Northern harrier (*Circus hudsonius*)

Breeding habitat includes fresh and brackish wetlands, open wet meadows and grasslands, shrub-steppe, desert sinks, areas along rivers and lake, and crop fields. The species commonly nests on the ground in shrubby vegetation at marsh edges but may also nest several miles from water. The property does not contain suitable habitat for this species.

Saltmarsh common yellowthroat (*Geothlypis trichas sinuosa*)

Habitat for this species includes woody swamps and brackish and freshwater marshes. The property does not contain habitat suitable for this species.

Yellow rail (*Coturnicops noveboracensis*)

Habitat for this species consists of freshwater marshlands. The property contains no suitable habitat.

Crotch bumble bee (*Bombus crotchii*)

Habitat consists of grassland and scrub habitat. No bumble bees or bumble bee colonies were observed during site surveys. The property is almost fully developed and the few areas that are not developed have been heavily modified and compacted and contain little vegetation making ground nesting highly unlikely. The species is therefore unlikely to occur at the property.

Lum's micro-blind harvestman (*Microcina lumi*)

This species is found beneath serpentine rocks in grasslands. The property contains no suitable habitat for this species.

Mimic tryonia; California brackishwater snail (*Tryonia imitator*)

The species inhabits coastal lagoons, estuaries, and salt marshes from Sonoma County to San Diego County. The property contains no suitable habitat for this species.

Monarch butterfly - California overwintering population (*Danaus plexippus* pop. 1)

California overwintering roosts are located in wind-protected tree groves (Eucalyptus, Monterey pine, cypress), with nectar and water sources nearby. The property does not contain suitable habitat.

Western bumble bee (*Bombus occidentalis*)

Bumblebee colonies are annual. In late winter or early spring the queen emerges from hibernation and selects a nest site, typically a pre-existing hole such as an abandoned rodent hole (Goulsen 2003). The property is almost fully developed and the few undeveloped areas have been heavily compacted and modified making ground nesting unlikely. As well no ground burrows or holes were seen on the site. The species is therefore unlikely to occur at the property.

Other nesting raptors (various species), generally protected under the State Resources Code (Sections 3503, 3503.5 and 3511) and the Migratory Bird Treaty Act (MBTA): The property does not contain suitable nesting and foraging habitat, though the surrounding properties contain potentially suitable nesting habitat for a number of raptor species, although none have been seen in the area. However, this could change and a preconstruction survey should be completed to determine the presence/absence of nesting raptors in the vicinity of the project prior to commencing work.

Other Migratory Nesting Birds; protected under the CDFW Code (Sections 3503, 3503.5 and 3511) and by the MBTA: The property provides marginally suitable habitat for nesting birds protected by the MBTA and State Code. Accordingly, there is potential for migratory nesting birds to nest on or adjacent to the site and a preconstruction nesting bird survey should be completed.

## **b. Plants**

There are 17 special status plant species with recorded occurrences within 5 miles of the property (Figure 3). Three of these species are listed under the FESA and would be protected from "take" under the FESA. The remaining 14 special status species are considered "special status" for purposes of CEQA analysis, but are not protected under the FESA.

None of these species have been observed on the property, nor is there habitat for any of these species. The property is largely developed with only several small, sparsely vegetated areas. These areas have also been heavily disturbed and are dominated by non-native ruderal species.

There are an additional 41 special status plant species with recorded observations within the 9 USGS Quads including and surrounding the project site (Table 2). Nine of these species would be protected from "take" under the FESA: beach layia (*Layia carnosa*), fountain thistle (*Cirsium fontinale* var. *fontinale*), Marin western flax (*Hesperolinon congestum*), pallid manzanita (*Arctostaphylos pallida*), presidio clarkia (*Clarkia franciscana*), robust spineflower (*Chorizanthe robusta* var. *robusta*), San Mateo thorn-mint (*Acanthomintha duttonii*), San Mateo woolly sunflower (*Eriophyllum latilobum*), and white-rayed pentachaeta (*Pentachaeta bellidiflora*)

The remaining 32 species are considered "special status" for purpose of a CEQA analysis, but are not protected under the FESA. All of these species are discussed in Table 2 with the reasons that they are unlikely to occur within the property.

### **Species within 5 miles of the Property Protected under the FESA:**

#### California seablite (*Suaeda californica*)

Habitat: Marshes and swamps (coastal salt). The species has not been observed on the property nor does the property contain suitable habitat for this species, therefore, there is no potential for significant impact or take, as defined by the FESA, with project implementation.

#### Contra Costa goldfields (*Lasthenia conjugens*)

Habitat: Alkali playa, cismontane woodland, valley and foothill grassland, vernal pool, wetland. The species has not been observed on the property; as well, the property is heavily disturbed/developed and does not contain suitable habitat for this species. Therefore, there is no potential for significant impact or take, as defined by the FESA, with project implementation.

Santa Cruz tarplant (*Holocarpha macradenia*)

Habitat: Coastal prairie, coastal scrub, valley and foothill grassland. The property is almost fully developed and does not contain suitable habitat for this species. As well it has not been observed on the property, therefore, there is no potential for significant impact or take, as defined by the FESA, with project implementation.

**Other Special Status Species within 5 miles of the Property not Protected under the ESA:**

Alkali milk-vetch (*Astragalus tener* var. *tener*)

Habitat: Playas, valley & foothill grassland, vernal pool, wetland. The property is almost fully developed and does not contain suitable habitat for this species. As well it has not been observed on the property. Therefore, this species is highly unlikely to occur on-site.

Big-scale balsamroot (*Balsamorhiza macrolepis*)

Habitat: Chaparral, cismontane woodland, ultramafic, valley and foothill grassland. The property is almost fully developed and does not contain suitable habitat for this species. As well it has not been observed on the property. Therefore, this species is highly unlikely to occur on-site.

Congdon's tarplant (*Centromadia parryi* ssp. *Congdonii*)

Habitat: Valley and foothill grassland (alkaline); seasonal wetlands on heavy clay, saline, or alkaline soils in grasslands and disturbed sites; typically growing in colonies. The property contains no suitable habitat for this species, as well it has not been observed on the property. Therefore, this species is highly unlikely to occur on-site.

Dark-eyed gilia (*Gilia millefliata*)

Habitat: coastal dunes. The property is almost fully developed and contains no suitable habitat for this species. As well, it has not been observed on the property. Therefore, this species is highly unlikely to occur on-site.

Diablo helianthella (*Helianthella castanea*)

Habitat: Broadleafed upland forest, chaparral, cismontane woodland, coastal scrub, riparian woodland, valley and foothill grassland. The property is almost fully developed and does not contain suitable habitat for this species. As well it has not been observed on the property. Therefore, this species is highly unlikely to occur on-site.

Fragrant fritillary (*Fritillaria liliacea*)

Habitat: Cismontane woodland, coastal prairie, coastal scrub, valley and foothill grassland. The species has not been observed on the property, as well the property is almost fully developed and does not contain suitable habitat for this species. Therefore, this species is highly unlikely to occur on-site.

Hairless popcornflower (*Plagiobothrys glaber*)

Habitat: Meadows and seeps (alkaline), marshes and swamps (coastal salt). The property contains no suitable habitat for this species, as well it has not been observed on the property. Therefore, this species is highly unlikely to occur on-site.

Jepson's coyote-thistle (*Eryngium jepsonii*)

Habitat: Valley and foothill grassland, vernal pools. The species has not been observed on the property, as well it is almost fully developed and does not contain suitable habitat for this species. Therefore, this species is highly unlikely to occur on-site.

Loma Prieta hoita (*Hoita strobilina*)

Habitat: chaparral, cismontane woodland, riparian woodland. The property contains no suitable habitat for this species, as well it has not been observed on the property. Therefore, this species is highly unlikely to occur on-site.

Long-styled sand-spurrey (*Spergularia macrotheca* var. *longistyla*)

Habitat: Marshes, swamps, meadows, and seeps. The property contains no suitable habitat for this species. As well, the species has not been observed at the property. Therefore, this species is highly unlikely to occur on-site.

Marin Knotweed (*Polygonum marinense*)

Habitat: Coastal salt marshes and brackish marshes. The property contains no suitable habitat for this species, nor has the species been observed at the site. Therefore, this species is highly unlikely to occur on-site.

Most beautiful jewelflower (*Streptanthus albidus* ssp. *Peramoenus*)

Habitat: Chaparral, cismontane woodland, valley and foothill grassland. The property is almost fully developed and does not contain suitable habitat for this species, as well it has not been observed on the property. Therefore, this species is highly unlikely to occur on-site.

Point Reyes salty bird's-beak (*Chloropyron maritimum* ssp. *palustre*)

Habitat: coastal salt marsh. The property does not contain suitable habitat for this species, nor has it been observed on the property. Therefore, this species is highly unlikely to occur on-site.

Woodland woollythreads (*Monolopia gracilens*)

Habitat: Chaparral, valley and foothill grassland, cismontane woodland, broadleafed upland forest, north coast coniferous forest. The species has not been observed on the property, as well the site has been heavily disturbed/developed and does not contain suitable habitat for this species. Therefore, this species is highly unlikely to occur on-site.

## **V. REGULATORY SETTING AND PERMITTING**

### **A. Federal Agencies**

#### **1. US Army Corps of Engineers**

The Corps is a federal agency within the Department of Defense. The Corps has jurisdiction over all navigable waters of the United States and has permit requirements to prevent unauthorized obstruction or alteration of these waters, including construction, excavation, or deposition of materials in, over, or under such waters or any work that would affect the course location, condition, or capacity of these waters. Section 404 of the Clean Water Act (CWA) authorizes the Corps to regulate any activity that fills wetlands or waters of the United States. Section 10 of the Rivers and Harbors Act authorizes the Corps to regulate any activity in navigable waters of the United States.

Generally, Corps permits are divisible among individual permits, nationwide permits (for relatively minor impacts, e.g. fills under 0.5 acres) and regional permits (for actions with minimal impacts but with regional elements, e.g. flood control maintenance throughout a specific County).

The property contains no wetlands or waters of the U.S. that are subject to the Corps' jurisdiction; see special status habitats discussion above. A Corps permit is therefore not necessary to develop the property.

#### **2. U.S. Fish and Wildlife Service**

The USFWS has jurisdiction over federally listed Threatened and Endangered species under the FESA. This act protects listed species from harm or "take," which is broadly defined as to "harass, harm, pursue, hunt, shoot, wound, kill, trap, capture, or collect, or attempt to engage in any such conduct." An activity can be defined as a "take" even if it is accidental or unintentional.

An Endangered species is one which is considered in danger of becoming extinct throughout all or significant portions of its range. A Threatened species is one that is likely to become endangered within the foreseeable future. In addition to Endangered and Threatened species, which are legally protected under the FESA, the USFWS maintains lists of candidate species and Birds of Conservation Concern. Species on these lists are not afforded the legal protection of FESA but are considered to be of special-status under CEQA.

Where projects that require federal approvals, such as Corps permits, may affect federally-listed species protected by the USFWS, the federal agency is required to consult with USFWS. Most commonly, where a development project is required to get a Corps permit, the Corps determines whether the project will affect federally-listed species. If the Corps determines that a project may affect federally-listed species, it initiates consultation with USFWS under Section

7 of the FESA. If no federal nexus exists, and a listed species may be impacted by a project, the applicant can apply under Section 10 of the FESA for take coverage.

No federally-listed species are likely to occur on the property or be impacted by a proposed project on the site. Therefore, development of the site will not require consultation with USFWS under Sections 7 or 10 of the FESA.

### **3. U.S. National Marine Fisheries Service**

The National Marine Fisheries Service (NMFS) has jurisdiction over anadromous fish that are federally listed Threatened and Endangered species under the ESA. NOAA Fisheries also regulates Essential Fish Habitat (EFH) pursuant to the Fish and Wildlife Coordination Act of 1934.

Similar to the procedures described above for the USFWS, where projects that require federal approvals, such as Corps permits, may affect federally-listed species protected by NMFS, the federal agency is required to consult with NMFS. Most commonly, where a development project is required to get a Corps permit, the Corps determines whether the project will affect federally-listed species. If the Corps determines that a project may affect federally-listed species, it initiates consultation with NMFS under Section 7 of the ESA.

The development of the site will not require consultation with NMFS because there is no habitat for anadromous fish species on the site.

## **B. State Agencies**

### **1. California Department of Fish and Wildlife**

The CDFW has jurisdiction over state-listed Threatened and Endangered species under the California Endangered Species Act (CESA). The state also maintains a list of wildlife identified as Species of Special Concern, Fully Protected Species and "Special Animals". Species on this list are not afforded the legal protection of the CESA but are considered to be of special-status under CEQA. Should the species result in the "take" of a state-listed Threatened or Endangered species, a permit would be required under Section 2081 of the California Endangered Species Act.

As well, CDFW Code Sections 3503, 3503.5 and 3511 provide protections for nesting migratory birds and raptors. This code makes it unlawful to take possess, or needlessly destroy the nest or eggs of any bird except under specific conditions as described in the code.

The CDFW also asserts jurisdiction over the bed and banks of watercourses according to the provisions of Section 1600 et seq of the Fish and Game Code. A Streambed Alteration Agreement is typically required for the fill or removal of any material from a natural drainage.

The jurisdiction of the CDFW generally extends to the top of a bank and also includes the outer edge of riparian canopy cover.

The property does not provide habitat for any species on the state's "Special Animals" lists. The proposed project will include mitigation measures to ensure the protection of nesting migratory birds and raptors as covered by CDFW Code. As well, the property does not contain any watercourses. A project at the site will therefore not require a permit from CDFW.

## **2. Regional Water Quality Control Board (RWQCB)**

Pursuant to section 401 of the CWA, projects that require a permit from the Corps under Section 404 must also obtain water quality certification from the RWQCB. This certification ensures that the project will uphold state water quality standards. Activities in wetlands or other waters that are outside of the jurisdiction of the Corps, such as the wetland on the property (e.g., isolated wetlands, vernal pools, streams above the ordinary high water mark), may also be regulated by the RWQCB under recent regulations passed pursuant to the State Porter-Cologne Act. Activities that lie outside of Corps jurisdiction but within the jurisdiction of the RWQCB may require the issuance of either individual or general Waste Discharge Requirement (WDRs) from the RWQCB.

The property does not contain any wetlands or waters that would be subject to the RWQCB's jurisdiction; see the special status habitats discussion above. A permit from the RWQCB is therefore not necessary for a project at the property.

## **C. Local Policies**

There are no local policies specific to biotic resources or local conservation plans that are relevant to the proposed project. The proposed project is, therefore, not in conflict with any local policies or local conservation plans.

## **VI. MITIGATION, AVOIDANCE, AND MINIMIZATION**

As discussed above, the property site does not contain any special status habitats or, with the exception noted below, special status species. However, the property contains potential roosting bat and nesting bird and nesting raptor habitat as described above.

Prior to building demolition, a roosting bat survey should be completed to determine if bats are present. The survey should examine all buildings, structures, trees, and shrubs that will be removed as part of the project. If any bats active roosts are present, a qualified biologist shall identify an appropriate construction-free buffer around the active nurseries. If a roost is present, no construction activities shall occur within the construction-free buffer during the maternity season (April 15 to August 15) or during the overwintering seasonal (October 15 – February 29). A qualified bat biologist may safely evict roosting bats outside of these seasons.

Should project construction begin between February 1 and September 1 (the migratory bird nesting season), a pre-construction nesting bird survey should be conducted to ensure that no nesting birds or raptors are disrupted by the project. The survey should be completed within 14 days prior to the start of construction and shall include a review of all trees, shrubs, and structures on the property that provide potential nesting habitat for bird or raptor species. As well, a buffer of 150 feet for passerines and 500 feet for raptors should also be surveyed for nesting species. If an active nest is encountered, a qualified biologist shall establish an appropriate, protective buffer around the nest to ensure that the nest inhabitants do not become distressed. The protective buffer shall remain in place until the nest is no longer active.

Table 1:  
Special Status Wildlife Species Occurrences

Scientific name	Common name	Status	Habitat	Potential habitat on-site	Range	Known range/ Critical habitat	Potential for occurrence on-site
<i>Antrozous pallidus</i>	pallid bat	BLM:S, CSC, IUCN:LC, USFS:S, WBWG:H, SA	Chaparral, Coastal scrub, Desert wash, Great Basin grassland, Great Basin scrub, Mojavean desert scrub, Riparian woodland, Sonoran desert scrub, Upper montane coniferous forest, Valley & foothill grassland	Marginal	Permanent resident throughout California and western U.S. from Washington to Colorado to Mexico	Yes	Unlikely: Only marginal roosting habitat present on site
<i>Corynorhinus townsendii</i>	townsend's big-eared bat	ST, CSC, SA	Broadleaved upland forest, Chaparral, Chenopod scrub, Great Basin grassland, Great Basin scrub, Joshua tree woodland, Lower montane coniferous forest, Meadow & seep, Mojavean desert scrub, Riparian forest, Riparian woodland, Sonoran desert scrub, Sonoran thorn woodland, Upper montane coniferous forest, Valley & foothill grassland	Marginal	Permanent resident throughout California and western U.S. from British Columbia to Colorado to central Mexico	Yes	Unlikely: Only marginal roosting habitat present on site
<i>Dipodomys heermanni berkeleyensis</i>	Berkeley kangaroo rat	-	Open grassy hilltops and open spaces in chaparral and blue oak/foothill pine woodlands. Needs fine, deep, well-drained soil for burrowing.	None	Berkeley, Mt. Diablo, and the East Bay Hills (Orinda Park Pool, Siesta Valley, Calaveras Reservoir)	No	None: No habitat and outside of species' range
<i>Dipodomys venustus venustus</i>	Santa Cruz kangaroo rat	BLM:S, CDFW:SSC, IUCN:EN, USFS:S	Chaparral habitats with silverleaf manzanita mixed chaparral in Zayante Sand Hills ecosystem of the Santa Cruz Mountains. Needs soft, well-drained sand.	None	Santa Cruz Mountains.	No	None: No habitat and outside of species' range
<i>Eumops perotis californicus</i>	western mastiff bat	BLM:S, CDFW:SSC, WBWG:H	Roosts in crevices in cliff faces, high buildings, trees and tunnels. Occurs in open, semi-arid to arid habitats, including conifer and deciduous woodlands, coastal scrub, grasslands, chaparral, etc.	None	Uncommon resident in southeastern San Joaquin Valley and Coastal Ranges from Monterey County southward through southern California, from the coast eastward to the Colorado Desert.	No	None: No habitat and outside of species' range
<i>Lasiorycterus boctivagans</i>	silver-haired bat	IUCN:LC, WBWG:M	Roosts in hollow trees, beneath exfoliating bark, abandoned woodpecker holes and rarely under rocks. Needs drinking water. Primarily a coastal and montane forest dweller, feeding over streams, pond and open bushy areas	Marginal	From the tree line in Canada southward through most of the continental U.S. to the Mexican border. Found in lower elevations not exceeding 3,600 feet.	Yes	Unlikely: Only marginal roosting habitat present on site
<i>Lasiurus cinereus</i>	hoary bat	IUCN:LC, WBWG:M	Typically roost in tree foliage and sometime cavities such as wood pecker holes. Typically 3 to 5 meters above the ground.	None	Occurs throughout the United States and central and eastern Canada, and in Central Mexico. Is common in the prairie states and less common in the eastern United States and northern Rockies.	Yes	None: No roosting habitat
<i>Neotoma fuscipes annectens</i>	San francisco dusky-footed woodrat	FE, CDFW:SSC	Constructs nests of shredded grass, leaves and other material. May be limited by availability of nest-building materials. Forest habitats of moderate canopy and moderate to dense understory. May prefer chaparral and redwood habitats	None	Common in California. Found in both Coast ranges and interior. Widespread along the western slope of the Sierra Nevada, mostly below 7,000 ft.	Yes	None: No habitat
<i>Nyctinomops macrotis</i>	big free-tailed bat	CDFW:SSC, IUCN:LC, WBWG:MH	Low-lying arid areas in southern California. Needs high cliffs or rocky outcrops for roosting sites.	None	Rare in California. Records of the species in California are from urban areas of San Diego Co and vagrants in fall and winter	No	None: No habitat and outside of species' range

MAMMALS

Scientific name	Common name	Status	Habitat	Potential habitat on-site	Range	Known range/ Critical habitat	Potential for occurrence on-site
<i>Reithrodontomys raviventris</i>	salt-marsh harvest mouse	FE, SE, CFP, IUCN:EN, SA	Marsh & swamp, Wetland	No	Primarily in salt marshes in south San Francisco Bay including San Mateo, Santa Clara, Contra Costa Alameda, Marin, Napa, Solano and Sonoma counties.	Yes	None: No habitat
<i>Scapanus latimanus parvus</i>	Alameda Island mole	CDFW:SSC	Found in a variety of habitats especially annual and perennial grasslands. Prefers moist, friable soils. Avoids flooded soils	No	Alameda Island	No	None: No habitat and outside of species' range
<i>Sorex vagrans halicoetes</i>	salt-marsh wandering shrew	CDFW:SSC	Marsh and swamp wetland with medium height marsh 6-8 feet above sea level where abundant driftwood is scattered among Salicornia	No	Salt marshes of the south arm of the San Francisco Bay	No	None: No habitat
<i>Taxidea taxus</i>	American badger	CSC, IUCN:LC, SA	Broadleaved upland forest, Chaparral, Chenopod scrub, Cismontane woodland, Coastal prairie, Coastal scrub, Meadow & seep, Riparian forest, Riparian scrub, Riparian woodland, Ultramafic, Valley & foothill grassland.	No	Throughout California and North American; from British Columbia to the Great Lake Region and south to Central Mexico.	Yes	None: No habitat

#### AMPHIBIANS

<i>Rana draytonii</i>	California red-legged frog	FT, CSC, IUCN:VU, SA	Aquatic, Artificial flowing waters, Artificial standing waters, Freshwater marsh, Marsh & swamp, Riparian forest, Riparian scrub, Riparian woodland, Sacramento/San Joaquin flowing waters, Sacramento/San Joaquin standing waters, South coast flowing waters, South coast standing waters, Wetland	None	Mendocino County to Baja California, primarily west of the Cascade-Sierra crest.	Yes	None: No habitat
<i>Rana boylei</i>	foothill yellow-legged frog	ST, BLM:S, CSC, IUCN:NT,USFS:S	Partially-shaded, shallow streams and riffles with a rocky substrate in a variety of habitats	None	Lower elevation streams draining the Pacific slope from west-central Oregon to northwestern Baja California.	No	None: No habitat
<i>Ambystoma californiense</i>	California tiger salamander	FT, ST, CDFW:WL, IUCN:VU	Cismontane woodland, meadow and seep, riparian woodland, valley and foothill grassland. Need underground refuges, especially ground squirrel burrows, and vernal pools or other seasonal water sources for breeding	None	Central Valley DPS federally listed as threatened. Santa Barbara and Sonoma Counties DPS federally listed as endangered	Yes	None: No habitat

#### REPTILES

<i>Emys marmorata</i>	western pond turtle	BLM:S, CSC, IUCN:VU, USFS:S, SA	Aquatic, Artificial flowing waters, Klamath/North coast flowing waters, Klamath/North coast standing waters, Marsh & swamp, Sacramento/San Joaquin flowing waters, Sacramento/San Joaquin standing waters, South coast flowing waters, South coast standing waters, Wetland	No	Isolated populations exist in the western half of California from the Sierra Nevada foothills to the Pacific coast, throughout the length of the state.	Yes	None: No habitat
<i>Masticophis lateralis euryxanthus</i>	Alameda whipsnake	FT, ST	Typically found in chaparral and scrub habitat, but will also use adjacent grasslands, oak savanna and woodland habitats	No	Found in the inner coast range of California - most occurrences in Contra Costa and Alameda counties some occurrences in San Joaquin and Santa Clara counties	Yes	None: No habitat
<i>Thamnophis sirtalis tetrataenia</i>	San Francisco garter snake	FE, SE, CDFW:FP	Occurs in the vicinity of freshwater marshes, ponds and slow-moving streams. Prefers dense cover and water depths of at least one foot. Upland areas near water are also very important.	No	San Mateo County and extreme northern Santa Cruz County.	No	None: No habitat and outside of species' range

Scientific name	Common name	Status	Habitat	Potential habitat on-site	Range	Known range/ Critical habitat	Potential for occurrence on-site
-----------------	-------------	--------	---------	---------------------------	-------	----------------------------------	----------------------------------

BIRDS

<i>Accipiter cooperii</i>	cooper's hawk	IUCN:LC CDFW:WL	Cismontane woodland, riparian forest, riparian woodland, upper montane coniferous forest. Nests site mainly in riparian growths of deciduous trees, as in canyon bottoms on river flood-plains; also live oaks	None	Can be found wintering over most of the continental U.S.	Yes	None: No nesting habitat
<i>Accipiter striatus</i>	sharp-shinned hawk	CDFW:WL, IUCN:LC	Preferes riparian areas, occurs in ponderosa pine, black oak, riparian deciduous, mixed conifer, and jeffrey pine habitats. Nests usually within 275 feet of water.	None	Widespread in North, Central, and South America.	Yes	None: No nesting habitat
<i>Aquila chrysaetos</i>	golden eagle	BLM:S, CDF:S, CFP, CDFW:WL, IUCN:LC, USFWS:BCC, SA	Broadleaved upland forest, Cismontane woodland, Coastal prairie, Great Basin grassland, Great Basin scrub, Lower montane coniferous forest, Pinon & juniper woodlands, Upper montane coniferous forest, Valley & foothill grassland	None	Permanent resident in mountainous areas throughout California.	Yes	None: No nesting habitat
<i>Agelaius tricolor</i>	tricolored blackbird	BLM:S, CSC, IUCN:EN, NABCI:RWL, USFWS:BCC, SA	Freshwater marsh, Marsh & swamp, Swamp, Wetland	No	Oregon to southern California; primarily along the central California coast and the Central Valley.	Yes	None: No nesting habitat
<i>Ardea herodias</i>	great blue heron	CDFW:S, IUCN:LC	Colonial nester in tall trees, cliffsides, and sequestered spots on marshes.	No	Shores and open water and in wetlands over most of North and Central America	Yes	None: No nesting habitat
<i>Asio flammeus</i>	short-eared owl	CDFW:SSC, NABCI:RWL, USFS:S, USFWS:BCC	found in swamp lands, both fresh and salt; lowland meadows and alfalfa fields.	No	Found on every continent except Australia and Antarctica. New York is the southern edge of breeding range. Northern population are highly migratory.	Yes	None: No nesting habitat
<i>Athene cunicularia</i>	burrowing owl	BLM:S, CSC, IUCN:LC, USFWS:BCC, SA	Coastal prairie, Coastal scrub, Great Basin grassland, Great Basin scrub, Mojavean desert scrub, Sonoran desert scrub, Valley & foothill grassland	No	Permanent resident of southern California valleys, from the Bay Area to Los Vegas, Nevada. Breeding range extends through the northern Central Valley.	Yes	None: No nesting habitat
<i>Charadrius alexandrinus nivosus</i>	western snowy plover	FT, CDFW:SSC, NABCI:RWL, USFWS:BCC	Needs sandy, gravelly or friable soils for nesting. Occurs on sandy beaches, salt pond levees and shores or larke alkali lakes.	No	Tidal waters of the Pacific Ocean. Breeding range extends from Damon Point, Washington, to bahia Magdalena, Baja California Mexico.	Yes	None: No habitat
<i>Circus cyaneus</i>	northern harrier	CSC, IUCN:LC, SA	Coastal scrub, Great Basin grassland, Marsh & swamp, Riparian scrub, Valley & foothill grassland, Wetland	No	From Alaska to eastern Canada and south to Southern California. Southern Texas and Baja California Peninsula and eastern Mexico.	Yes	None: No nesting habitat
<i>Coturnicops noveboracensis</i>	yellow rail	CDFW:SSC, IUCN:LC, NABCI:RWL, USFS:S, USFWS:BCC	Freshwater marshlands, meadows and seeps.	No	Occurs year round in California. As a local breeder in the northeastern interior and as a winter visitor and on the coast and in Suisun Marsh region.	No	None: No habitat and outside of species' range
<i>Elanus leucurus</i>	white-tailed kite	BLM:S, CDFW:FP, IUCN:LC	Rolling foothills and valley margins with scattered oaks and river bottomlands or marsh next to deciduous woodland.	No	Central Valley and and Southern coastal areas. Humbolt and San Francisco Bay area.	Yes	None: No nesting habitat

Scientific name	Common name	Status	Habitat	Potential habitat on-site	Range	Known range/ Critical habitat	Potential for occurrence on-site
<i>Falco peregrinus anatum</i>	American peregrine falcon	CDF:S, CDFW:FP, USFWS:BCC	Nests consist of a scrape or depression or ledge in an open site. Nests near wetlands, lakes, rivers, or other water. On cliffs, banks, dunes, mounds, also human-made structures.	No	One of the most widely distributed raptors. Full range extends from the tundra to the tropics.	Yes	None: No nesting habitat
<i>Geothlypis trichas sinuosa</i>	saltmarsh common yellowthroat	CSC, USFWS:BCC, SA	Marsh & swamp	No	Breeds in the San Francisco Bay area from the Tomales Bay to Carquinez Strait and San Jose. Non-breeding range extends down to San Diego.	Yes	None: No habitat
<i>Laterallus jamaicensis coturniculus</i>	Californai black rail	ST, BLM:S, IUCN: NT, CFP, NABCI:RWL, USFWS:BCC, SA	Brackish marsh, Freshwater marsh, Marsh & swamp, Salt marsh, Wetland	No	Fragmented populations in San Francisco Bay area, including San Pablo Bay, Tomales Bay and Bolinas Lagoon.	Yes	None: No habitat
<i>Melospiza melodia pusillula</i>	Alameda song sparrow	CDFW:SSC, USFWS:BCC	Inhabits Salicornia marshes, nests low in Grindella bushes and in Salicornia.	No	Resident of salt marshes bordering the south arm of San Francisco Bay	Yes	None: No habitat
<i>Nycticorax nycticorax</i>	black-crowned night heron	IUCN:LC	Colonial nester usually in trees and occasionally in tule patches. Rookery sites located adjacent to foraging areas such as lake margins, mud-bordered bays and marshy spots	No	Lowlands and foothills throughout most of California, including the Salton Sea and Colorado River areas.	Yes	None: No habitat
<i>Phalacrocorax auritus</i>	double-crested cormorant	CDFW:WL, IUCN:LC	Colonial nester on coastal cliffs, offshore islands, and along lake margins in the interior of the state	No	widely distributed in North America. Usually found in clocks along the coast and inland lakes, rivers, and other water bodies	Yes	None: No habitat
<i>Rallus obsoletus obsoletus</i>	California Ridgeway's rail	FE, SE, CFP, NABCI:RWL, SA	Brackish marsh, Marsh & swamp, Salt marsh, Wetland	No	The San Francisco Bay area, including all 9 counties that border the bay.	Yes	None: No habitat
<i>Riparia riparia</i>	bank swallow	ST, BLM:S, IUCN:LC	Colonial nester. Nests primarily in riparian and othe rlowland habitats west of the desert. Requires verticle banks/cliffs with fine textured/sandy soils near streams, rivers, lakes, ocean to dig nest holes.	No	resident in northern and central California. Few colonies are known in southern California.	Yes	None: No habitat
<i>Rynchops niger</i>	black skimmer	CDFW:SSC, IUCN:LC, NABCI:YWL, USFWS:BCC	Nests on gravel bars, low islets, and sant beaches, in unvegetated sites.	No	Coastal waters protected from open surf along the Coast of California and at the Salton Sea	No	None: No habitat
<i>Setophaga petechia</i>	yellow warbler	CDFW:SSC, USFWS:BCC	Riparian plant associations in close proximity to water. Riparian forests, scrub, and woodland.	No	Uncommon in Central Valley, abundant in northwestern California breees throughout Del Norte, western Siskiyou, Humbolt, trinity, Mendocino and Sonoma counties.	No	None: No habitat
<i>Sternula antillarum browni</i>	California least tern	FE,SE, CDFW:FP, NABCI:RWL	Colonial breeder on bare or sparsely vegetated, flat substrates: sand beaches, alkali flats, land fills, or paved areas.	No	Coast from San Francisco Bay south to northern Baja California	Yes	None: No habitat

Scientific name	Common name	Status	Habitat	Potential habitat on-site	Range	Known range/ Critical habitat	Potential for occurrence on-site
-----------------	-------------	--------	---------	---------------------------	-------	----------------------------------	----------------------------------

INVERTEBRATES

<i>Bombus caliginosus</i>	obscure bumble bee	IUCN: CU	Coastal areas. Flood plain genera include Baccharis, Cirsium, Lupinus, lotus, Grindelia, and Phacelia	No	Coastal areas from Santa Barbara county north to Washington state.	Yes	None: No habitat; study has been and continues to be heavily disturbed
<i>Bombus crotchii</i>	crotch bumble bee	C3G4, S1S2	Grassland and scrub	Marginal	Mediterranean region, Pacific Coast, Western Destert, Great Valley, and adjacnet foothills throughout most of southwestern California	Yes	Unlikely: Marginal habitat, only one old (1968) record in region
<i>Bombus occidentalis</i>	western bumble bee	USFS:S, X:IM, SA	Once relatively widespread, but species has declined from central California to southern British Columbia	Marginal	Once realtively widespread, now in serious decline in central to southern California	Yes	Unlikely: Marginal habtiat, and most recent record is from 1985.
<i>Calicina minor</i>	edgewood blind harvestman	-	Found on the underside of moist serpentine rocks near permanet springs. Open grassland in areas of serpentine bedrock.	No	Currently known only in Edgewood Park.	No	None: No habitat and outside of species known range
<i>Cicindela hirticollis grvida</i>	sandy beach tiger beetle	-	Table 1:	No	Non-brackish water along the coast of California from San Francisco Bay to northern Mexico	No	None: No habitat and outside of species range
<i>Danaus plexippus pop.1</i>	monarch - California overwintering population	USFS:S	Special Status Wildlife Species Occurrences	No	Winter roost sites extend along the coast from northern mendocino to Baja California, Mexico	Yes	None: No habitat
<i>Efferia antiochi</i>	Antioch efferian robberfly	-	Known to occur only in Antioch, Fresno, and Scout Island in the San Joaquin River	No	Contra Costa and Fresno Counties	No	None: No habitat and outside of species range.
<i>Euphydryas editha bayensis</i>	bay checkerspot butterfly	FT, XERCES:CI	Coastal dunes, ultramafic, valley and foothill grasslands. Plantago erecta is the primary host plant.	No	Native grasslands on outcrops of serpentine soil in the vicinity of San Francisco Bay	No	None: No habitat and outside of species range.
<i>Helminthoglypta nickliniana bridgesi</i>	bridges' coast range shoulderband	IUCN:DD	Valley and foothill grasslands. Tends to colonize under tall grasses and weeds	No	Alameda and Contra Costa County	Yes	None: No habitat

Scientific name	Common name	Status	Habitat	Potential habitat on-site	Range	Known range/ Critical habitat	Potential for occurrence on-site
<i>Hydrochara rickseckeri</i>	ricksecker's water scavenger	G2S2	Rare, vernal pool species	No	San Mateo, Marin, Sonoma, Solano, Sacramento, San Joaquin, Lake, Placer Counties	No	None: No habitat
<i>Ischnura gemina</i>	San Francisco forktail damselfly	IUCN:VU	Small, marshy ponds and ditches with emergent and floating aquatic vegetation	No	San Francisco Bay area	Yes	None: No habitat
<i>Microcina leei</i>	lee's micro-blind harvestman	-	Found beneath sandstone rocks in open oak grassland.	No	San Francisco Bay region	Yes	None: No habitat, few recorded observations
<i>Microcina lumi</i>	lum's micro-blind harvestmand	-	Beneath serpentine rocks in grassland	No	Xeric habitats in San Francisco Bay region	No	None: No habitat, few recorded observations
<i>Mimic tryonia</i> (California brackishwater snail)	tryonia imitator	IUCN: DD	Found only in permanently submerged areas in a variety of sediment types; able to withstand a wide range of salinities.	No	Coastal lagoons, estuaries, and salt marshes from Sonoma County south to San Diego County	No	None: No habitat
<i>Speyeria zerene myrtleae</i>	myrtle's silverspot butterfly	FE, XERCES:CI	Coastal dunes.	No	Foggy, coastal dunes/hills of the Point Reyes peninsula; extirpated from coastal San Mateo County	No	None: No habitat and outside species range
<i>Trachusa gummifera</i>	San Francisco leaf-cutter bee	-	None listed.	No	Marin, San Francisco, and San Mateo Counties	No	None: No habitat, few local occurrences and no recent observations

FISH

<i>Eucyclogobius newberryi</i>	tidewater goby	FE, AFS:EN, CDFW:SSC, IUCN:VU	Found in shallow lagoons and lower stream reaches, needs fairly still but not stagnant water with high oxygen levels.	No	Brackish water habitats along the California coast from Agua Hedionda Lagoon, San Diego County to the mouth of the Smith River	No	None: No habitat
<i>Oncorhynchus mykiss irideus</i> pop. 8	steelhead-central California coast DPS	FT, AMS:T, SA	Streams and rivers, deep low velocity pools, freshwater bodies, estuaries, Pacific ocean	No	Bir Sur Coast, Carmel Basin, Interior Coast Range, and San Luis Obispo Terrace.	Yes	None: No habitat
<i>Spirinchus thaleichthys</i>	longfin smelt	FC, ST, CSC, SA	Aquatic, Estuary. Spawns in brackish streams and sloughs.	No	California coastal streams from the San Francisco Bay northward. However populations in the San Francisco Bay Estuary and Delta may be extirpated.	Yes	None: No habitat

Table 2  
Special Status Plant occurrences

Scientific name	Common name	Status	Habitat	Potential habitat on-site	Range	Known Range	Elevation	Life Form	Potential for Occurrence On-site	Flowering/ Survey Period
<i>Acanthomintha duttonii</i>	San Mateo thorn-mint	FE, SE, CRPR 1B.1	Serpentine chaparral, valley and foothill grassland	No	San Mateo	No	50-300 meters	annual herb	None: No habitat	April - June
<i>Allium peninsulare</i> var. <i>franciscanum</i>	Franciscan onion	CRPR 1B.2	Clay, volcanic, often serpentine, cismontane woodland, valley and foothill grassland	No	Mendocino, Napa, Santa Clara, San Mateo, Sonoma	No	52-305 meters	perennial bulbiferous herb	None: No habitat	(April)May - June
<i>Amsinkia lunaris</i>	bent-flowered fiddleneck	CRPR 1B.2	Coastal bluff scrub, cismontane woodland, valley and foothill grassland	No	Alameda, Contra Costa, Colusa, Lake, Marin, Napa, San Benito, Santa Clara, Santa Cruz, San Mateo, Sonoma, Sutter, Yolo	Yes	3-500 meters	annual herb	None: No habitat	March - July
<i>Anomobryum julaceum</i>	slender silver moss	CRPR 4.2	Damp rock and soil on outcrops, usually on roadcuts. Broadleaved upland forest, lower montane coniferous forest, north coast coniferous forest	No	Butte Contra Costa, Humboldt, Los Angeles, Mariposa, Santa Barbara, Santa Cruz, Sonoma	No	100- 1000 meters	moss	None: No habitat	N.A.
<i>Arctostaphylos pallida</i>	pallid manzanita	FT, SE, CRPR 1B.1	siliceous shale, sandy or gravelly, broadleaved upland forest, closed-cone coniferous forest, chaparral, cismontane woodland, coastal scrub	No	Alameda, Contra Costa	Yes	185-465 meters	perennial evergreen shrub	None: No habitat, not observed during site survey	Dec. - March
<i>Astragalus pycnostachyus</i> var. <i>pycnostachyus</i>	coastal marsh milk-vetch	CRPR 1B.2	Coastal dunes (mesic), coastal scrub, marshes and swamps (coastal salt, streamsides)	No	Humboldt, Marin, San Luis Obispo, San Mateo	No	0-30 meters	perennial herb	None: No habitat, not observed during site survey	(April)June-Oct.
<i>Astragalus tener</i> var. <i>tener</i>	alkali milk-vetch	CRPR 1B.2	Playas, valley & foothill grassland, vernal pool, wetland	No	Alameda, Contra Costa, Merced, Monterey, Napa, San Benito, Santa Clara, San Francisco, San Joaquin, Solano, Sonoma, Stanislaus, Yolo	Yes	1 - 60 meters	annual herb	None: No habitat, not observed during site survey	March - June
<i>Balsamorhiza macrolepis</i>	big-scale balsamroot	CRPR 1B.2; BLM:S	Chaparral, cismontane woodland, ultramafic, valley and foothill grassland; sometimes on serpentine	No	Alameda, Amador, Butte, Colusa, El Dorado, Lake, Mariposa, Napa, Placer, Santa Clara, Shasta, Solano, Sonoma, Tehama, Tuolumne	Yes	90 -1555 meters	perennial herb	None: No habitat, not observed during site survey	March - June
<i>Calochortus pulchellus</i>	Mt. Diablo fairy-lantern	CRPR 1B.2	Chaparral, cismontane woodland, riparian woodland, valley and foothill grassland	No	Alameda, Contra Costa, Solano	Yes	30-840 meters	perennial bulbiferous herb	None: No habitat, not observed during site survey	April - June
<i>Carex comosa</i>	bristly sedge	CRPR 2B.1	Coastal prairie, marshes and swamps, lake margins, valley and foothill grasslands	No	Contra Costa, Lake, mendocino, Sacramento, San Bernardino, Santa Cruz, San Francisco, Shasta, San Joaquin, Sonoma	No	0 - 625 meters	perennial rhizomatous herb	None: No habitat, not observed during site survey	May - Sept.
<i>Centromadia parryi</i> ssp. <i>Congdonii</i>	Congdon's tarplant	CRPR 1B.1	Valley and foothill grassland (alkaline)	No	Alameda, Contra Costa, Monterey, Santa Clara, Santa Cruz, San Luis Obispo, San Mateo, Solano	Yes	0-230 meters	annual herb	None: No habitat	May - Oct. (Nov.)
<i>Chloropyron maritimum</i> ssp. <i>palustre</i>	Point Reyes salty bird's-beak	CRPR 1B.2	Marshes and swamps (coastal salt)	No	Alameda, Humboldt, Marin, Santa Clara, San Francisco, San Mateo, Sonoma	Yes	0-10 meters	annual herb	None: No habitat	June - Oct.
<i>Choizanthe cuspidata</i> var. <i>cuspidata</i>	San Francisco Bay spineflower	CRPR 1N.2	Sandy, coastal bluff scrub, coastal dunes, coastal prairie, coastal scrub	No	Alameda, Marin, San Francisco, San Mateo, Sonoma	Yes	3-215 meters	annual herb	None: No habitat	April - July (Aug.)

Table 2  
Special Status Plant occurrences

Scientific name	Common name	Status	Habitat	Potential habitat on-site	Range	Known Range	Elevation	Life Form	Potential for Occurrence On-site	Flowering/ Survey Period
<i>Chorizanthe robusta</i> var. <i>robusta</i>	robust spine flower	FE, CRPR 1B.1	Sandy or gravelly, chaparral (maritime), cismontane woodland (openings), coastal dunes, coastal scrub	No	Alameda, Monterey, Marin, Santa Clara, Santa Cruz, San Francisco, San Mateo	Yes	3 - 300 meters	annual herb	None: No habitat	April - Sept.
<i>Circium fontinale</i> var. <i>fontinale</i>	fountain thistle	FE, SE, CRPR 1B.1	Serpentine soils, seeps and streams in chaparral, valley and foothill grasslands	No	San Mateo	No	45-175 meters	annual herb	None: No habitat and outside of species range	May- Oct.
<i>Clarkia concinna</i> ssp. <i>Automixa</i>	Santa Clara red ribbons	CRPR 4.3	Chaparral, cismontane woodland	No	Alameda, Santa Clara, Santa Cruz	Yes	90-1500 meters	annual herb	None: No habitat	(April)May- June (July)
<i>Clarkia franciscana</i>	Presidion clarkia	FE, SE, CRPR 1B.1	Coastal scrub, valley and foothill grassland	No	Alameda, San Francisco	Yes	25-335	annual herb	None: no habitat	May - July
<i>Collinsia multicolor</i>	San Francisco collinsia	CRPR 1B.2	Sometimes serpentine, closed-cone coniferous forest, coastal scrub	No	Monterey, Marin, Santa Clara, Santa Cruz, San Francisco, San Mateo	No	30-250 meters	annual herb	None: No habitat and outside os species range	(Feb.)March- May
<i>Eriogonum luteolum</i> var. <i>Caninum</i>	Tiburon buckwheat	CRPR 1B.2	Serpentinite, sandy to gravelly, chaparral, cismontane woodland, coastal prairie, valley and foothill grassland	No	Alameda, Contra Costa, Marin, Sonoma	Yes	0 - 700 meters	annual herb	None: No habitat	May- Sept.
<i>Eriophyllum latilobum</i>	San Mateo woolly sunflower	FE, SE, CRPR 1B.1	Cismontane woodland (often serpentinite, on roadcuts), coastal scrub, lower montane coniferous forest	No	San Mateo	No	45-330 meters	perennial herb	None: No habitat and not observed during site survey	May - June
<i>Eryngium aristulatum</i> var. <i>hooveri</i>	Hoover's button-celery	CRPR 1B.1	Vernal pools	No	Alameda, San Benito, Santa Clara, San Diego, San Luis Opispo	Yes	3-45 meters	annual/perennial herb	None: No habitat	(June)July (Aug.)
<i>Eryngium jepsonii</i>	Jepson's coyote thistle	CRPR 1B.2	Clay. Valley anf foothill grassland, vernal pools	No	Amameda, Amador, Calaveras, Contra Costa, Fresno, Napa, San Mateo, Solano, Stanislaus, Tuolumne, Yolo	Yes	3-300 meters	perennial herb	None: No habitat and not observed during site survey	April - Aug.
<i>Extriplex (Atroplex) joaquinana</i>	San Joaquin spearscale	CRPR 1B.2, BLM:S	Chenopod scrub, alkali meadows and seeps, playas, valley and foothill grassland	No	Alameda, Contra Costa, Colusa, Fresno, Glenn, Merced, Monterey, Napa, San Benito, Santa Clara, San Joaquin, San Luis Obispo, Solano, Tulare, Yolo	Yes	1 - 835 meters	annual herb	None: No habitat	April - October
<i>Fissidens pauperculus</i>	minute paper moss	CRPR 1B.2	North coast coniferous forest (damp coastal soils)	No	Alameda, Butte, Del Norte, Humbolt, Mendorino, Marin, Santa Cruz, San Mateo, Sonoma, Yuba	Yes	10-1024 meters	moss	None: No habitat	n/a
<i>Fritillaria biflora</i> var. <i>ineziana</i>	Hillsborough chocolate lily	CRPR 1B.1	Serpentinite, cismontane woodland, valley and foothill grassland	No	San Mateo	No	-	perennial bulbiferous herb	None: No habitat only known from Hillsborough area	March - April
<i>Fritillaria liliacea</i>	fragrant fritillary	CRPR 1B.2	Often serpentine, cismontane woodland, coastal prairie, coastal scrub, valley and foothill grassland	No	Alameda, Contra Costa, Monterey, Marin, San Benito, santa Clara, San Francisco, San Mateo, Solano, Sonoma	Yes	3-410 meters	perennial bulbiferous herb	None: No habitat	Feb. - April
<i>Gilia capitata</i> ssp. <i>Chamissonis</i>	blue coast gilia	CRPR 1B.1	Coastal dunes, coastal scrub	No	Marin, San Francisco, Sonoma	No	2 - 200 meters	annual herb	None: No habitat	April - July

Table 2  
Special Status Plant occurrences

Scientific name	Common name	Status	Habitat	Potential habitat on-site	Range	Known Range	Elevation	Life Form	Potential for Occurrence On-site	Flowering/ Survey Period
<i>Gilia millefoliata</i>	dark-eyed gilia	CRPR 1B.2	Coastal dunes	No	Alameda, Del Norte, Humbolt, Mendocino, Marin, San Francisco, San Mateo, Sonoma	Yes	2-30 meters	annual herb	None: No habitat	April - July
<i>Dirca occidentalis</i>	western leatherwood	CRPR 1B.2	Mesic, broadleaved upland forest, chaparral, cismontane woodland, north coast coniferous forest, riparian fores, riparian woodland	No	Alameda, Contra Costa, Marin, Santa Clara, San Mateo, Sonoma	Yes	25- 425 meters	perennial deciduous shrub	None: No habitat and not observed during site survey	Jan. - March (April)
<i>Helianthella castanea</i>	Diablo helianthella	CRPR 1B.2	Usually rocky, axonal soils. Often in partial shade. Broadleaved upland forest, chaparral, cismontane woodland, coastal scrub, riparian woodland, valley and foothill grassland	No	Alameda, Contra Costa, Marin, San Francisco, San Mateo	Yes	60 - 1300 meters	perennial herb	None: No habitat and not observed during site survey	March - June
<i>Hemizonia congesta ssp. Congesta</i>	congested-headed hayfield tarplant	CRPR 1B.2	Sometimes roadsides valley and foothill grassland	No	Lake, Mendocino, Marin, San Francisco, San Mateo, Sonoma	No	20-560 meters	annual herb	None: No habitat	April - Nov.
<i>Heteranthera dubia</i>	water star-grass	CRPR 2B.2	Requires a pH of 7 or higher, usually in slightly eutrophic waters. Marshes and swamps.	No	Butte, Colusa, Lassen, Mendocino, Modoc, Marin, San Francisco, Shasta, San Mateo	No	30-1495 meters	perennial herb (aquatic)	None: No habitat	July - Oct.
<i>Hesper-evax sparsiflora var. brevifolia</i>	short-leaved evax	CRPR 1B.2	Coastal bluff scrub (sandy), coastal dunes, coastal prairie	No	Del Norte, Humbolt, Mendocino, Marin, Santa Cruz, San Francisco, San Mateo, Sonoma	No	0 - 215 meters	annual herb	None: No habitat	March - June
<i>Hesperolinon congestum</i>	Marin western flax	CRPR 1B.1	Serpentinite, chaparral, valley and foothill grassland	No	Marin, San Francisco, San Mateo	No	5-370 meters	annual herb	None: No habitat and outside of species range	April - July
<i>Hoita strobilina</i>	Loma Prieta hoita	CRPR 1B.1	Usually serpentinite, mesic, chaparral, cismontane woodland, riparian woodland	No	Alameda, Contra Costa, Santa Clara, Santa Cruz	No	30-860 meters	perennial herb	None: No habitat and not observed during site survey	May-June (Aug.-Oct.)
<i>Holocarpha macradenia</i>	Santa Cruz tarplant	FT, SE, CRPR 1B.1	Often clay, sandy coastal prairie, coastal scrub, valley and foothill grassland	No	Alameda, Contra Costa, Monterey, Marin, Santa Cruz, Solano	No	10-220 meters	annual herb	None: No habitat	June- Oct.
<i>Horkelia cuneata var. sericea</i>	Kellogg's horkelia	CRPR 1B.1	Sandy or gravelly openings, closed-cone coniferous forest, chaparral (maritime), coastal dune, coastal scrub	No	Alameda, Monterey, Marin, Santa Barbara, Santa Cruz, San Francisco, San Luis Opispo, San Mateo	Yes	10-200 meters	perennial herb	None: No habitat and not observed during site survey	April - Sept.
<i>Layia carnosa</i>	beach layia	CRPR 1B.1	Coastal dunes, coastal scrub (sandy)	No	Humbolt, Monterey, Marin, Santa Barbara, San Francisco	No	0-60 meters	annual herb	None: No habitat	March - July
<i>Lasthenia conjugens</i>	Contra Costa goldfields	FE, CRPR 1B.1	Alkali playa, cismontane woodland, valley and foothill grassland, vernal pool, wetland	No	Alameda, Contra Costa, Mendocino, Monterey, Marin , Napa, Santa Barbara, Santa Clara, Solano, Sonoma	Yes	0 - 470 meters	annual herb	None: No habitat	March - June
<i>Leptosiphon rosaceus</i>	rose leptosiphon	CRPR 1B.1	Coastal bluff scrub	No	Marin, San Francisco, San Mateo, Sonoma	No	0-100 meters	annual herb	None: No habitat and outside of species range	April- July
<i>Lessingia arachnoidea</i>	Crystal Springs lessingia	CRPR 1B.2	Serpentinite, often roadsides, cismontane woodland, coastal scrub, valley and foothill grassland	No	San Mateo, Sonoma	No	60 - 200 meters	annual herb	None: No habitat	July - Oct.

Table 2  
Special Status Plant occurrences

Scientific name	Common name	Status	Habitat	Potential habitat on-site	Range	Known Range	Elevation	Life Form	Potential for Occurrence On-site	Flowering/ Survey Period
<i>Malacothamnus arcuatus</i>	arcuate bush-mallow	CRPR 1B.2	Chaparral, cismontane woodland	No	Santa Clara, Santa Cruz, San Mateo	No	15 - 355 meters	perennial evergreen shrub	None: No habitat, not observed during site survey	April - Sept.
<i>Meconella oregana</i>	oregon meconella	CRPR 1B.1	Coastal prairie, coastal scrub	No	Contra Costa, Monterey, Santa Clara, San Luis Obispo	No	250-620 meters	annual herb	None: No habitat and outside of species range	March - April
<i>Monolopia gracilens</i>	woodland woollythreads	CRPR 1B.2	Serpentine, broadleaved upland forest (openings), chaparral (openings), cismontane woodland, north coast coniferous forest (openings), valley and foothill grassland	No	Alameda, Contra Costa, Monterey, San Benito, Santa Clara, Santa Cruz, San Luis Obispo, San Mateo	Yes	100 - 1200 meters	annual herb	None: No habitat	(Feb.)March - July
<i>Pentachaeta bellidiflora</i>	white-rayed pentachaeta	CRPR 1B.1	Cismontane woodland, valley and foothill grassland (often serpentinite)	No	Marin, Santa Cruz, San Mateo	No	35- 620 meters	annual herb	None: No habitat	March - May
<i>Plagiobothrys diffusus</i>	San Francisco popcorn flower	SE, CRPR 1B.1	Coastal prairie, valley and foothill grassland	No	Alameda, San Benito, Santa Cruz, San Francisco, San Mateo	Yes	60-360 meters	annual herb	None: No habitat	March - June
<i>Plagiobothrys chorisianus</i> var. <i>chorisianus</i>	Choris' popcornflower	CRPR 1B.2	Mesic chaparral, coastal prairie, coastal scrub	No	Alameda, Monterey, Santa Clara, Santa Cruz, San Francisco, San Mateo	Yes	3- 160 meters	annual herb	None: No habitat	March - June
<i>Plagiobothrys glaber</i>	hairless popcornflower	CRPR 1A	Meadows and seeps (alkaline), marshes and swamps (coastal salt)	No	Alameda, Marin, San Benito, Santa Clara	Yes	15-180 meters	annual herb	None: No habitat and presumed extirpated in CA	March - May
<i>Polygonum marinense</i>	Marin knotweed	CRPR 3.1	Brackish marsh, marsh & swamp, salt marsh, wetland	No	Alameda, Humboldt, Marin, Napa, Solano, Sonoma	Yes	0 - 10 meters	annual herb	None: no habitat	April - October
<i>Sanicula maritima</i>	adobe sanicle	CRPR 1B.1	Clay, serpentinite, chaparral, coastal prairie, meadows and seeps, valley and foothill grassland	No	Alameda, Monterey, San Francisco, San Luis Obispo	Yes	30-240 meters	perennial herb	None: No habitat, not observed during site survey	Feb. - May
<i>Senecio aphanactis</i>	Chaparral ragwort	CRPR 2B.2	Sometimes alkaline chaparral, cismontane woodland, coastal scrub	No	Alameda, Contra Costa, Fresno, Las Angeles, Merced, Monterey, Orange, Riverside, Santa Barbara, San Bernardino, San Benito, Santa Clara, Santa Cruz, Santa Catalina Island, Santa Cruz Island, San Diego, San Francisco, San Luis Obispo, San Mateo, Solano, Santa Rosa Island, Tulare, Ventura	Yes	15- 800 meters	Annual herb	None: No habitat	Jan. - April (May)
<i>Spergularia macrotheca</i> var. <i>longistyla</i>	long-styled sand-spurrey	CRPR 1B.2	Meadows and seeps, Marshes and swamps	No	Alameda, Contra Costa, Napa, Solano	Yes	0 - 255 meters	perennial herb	None: No habitat and not observed during site survey	Feb. - May
<i>Streptanthus albidus</i> ssp. <i>Peramoenus</i>	most beautiful jewel flower	CRPR 1B.1	Serpentinite, chaparral, cismontane woodland, valley and foothill grassland	No	Alameda, Contra Costa, Monterey, Santa Clara, San Luis Obispo	Yes	95-1000 meters	annual herb	None: No habitat	(March)April - Sept. (Oct.)

Table 2  
Special Status Plant occurrences

Scientific name	Common name	Status	Habitat	Potential habitat on-site	Range	Known Range	Elevation	Life Form	Potential for Occurrence On-site	Flowering/ Survey Period
<i>Stuckenia filiformis</i> <i>ssp. alpina</i>	slender-leaved pondweed	BRPR 2B.2	Marshes and swamps (assorted shallow freshwater)	No	Alameda, Butte, Contra Costa, El Dorado, Lassen, Merced, Mono, Modoc, Mariposa, Nevada, Placer, Santa Clara, Shasta, Sierra, San Mateo, Solano, Sonoma	Yes	300 - 2150 meters	Perennial rhizomatous herb	None: No habitat	May - July
<i>Suaeda californica</i>	California seablite	CRPR 1B.1	Marshes and swamps	No	Alameda, Contra Costa, Santa Clara, Can Francisco, San Luis Obispo	Yes	0-15 meters	perennial evergreen shrub	None: No habitat, not observed during site survey	July - Oct.
<i>Trifolium hydrophilum</i>	saline clover	CRPR 1B.2	Marsh & swamp, valley & foothill grassland, vernal pool, wetland	No	Alameda, Contra Costa, Colusa, Lake, Monterey, Napa, Sacramento, San Benito, Santa Clara, Santa Cruz, San Joaquin, San Luis Obispo, San Mateo, Solano, Sonoma, Yolo	Yes	0 - 300 meters	annual herb	None: No habitat	April - June
<i>Triphysaria floribunda</i>	San Francisco owl's-clover	CRPR 1B.2	Usually serpentine, coastal prairie, coastal scrub, valley and foothill grassland	No	Marin, San Francisco, San Mateo	No	10-160 meters	Annual herb	None: No habitat and outside species range	April - June
<i>Viburnum ellipticum</i>	oval-leaved viburnum	CRPR 2B.3	Chaparral, cismontane woodland, lower montane coniferous forest	No	Alameda, Contra Costa, El Dorado, Fresno, Glenn, Humboldt, Lake, Mendocino, Mariposa, Napa, Placer, Shasta, Solano, Sonoma, Tehama	Yes	215 - 1400 meters	perennial deciduous shrub	None: no habitat	May - June

**Subject: 903 Manor Boulevard Cultural Resource Study, San Leandro, Alameda County, California**

Dear Mr. Mogensen:

This report presents the findings of a cultural resources study which was prepared in support of the 903 Manor Boulevard Residential Project (project). The project site is approximately 2.3 acres on Assessor's Parcel Number 80H-1541-035 and is currently developed with the Manor Bowl bowling alley. The proposed project would entail the demolition of a bowling alley built in 1960 and the construction of six residential buildings comprising 39 residential units, a parking garage, and 8,350 square feet of open space. The current cultural resource study was conducted to determine whether the project would impact cultural resources and included a records search, background and archival research, and a pedestrian survey of the project site. All work was completed in compliance with the California Environmental Quality Act and other applicable state and local guidelines and regulations.

## Cultural Resources Records Search

To identify previous cultural resources work and previously recorded cultural resources within a 0.5-mile radius of the project site. Rincon requested a search of the California Historical Resources Information System (CHRIS) at the Northwest Information Center (NWIC) at Sonoma State University on January 3, 2020. The CHRIS records search also included a review of the National Register of Historic Places (NRHP), the California Register of Historical Resources (CRHR), the California Points of Historical Interest list, the California Historical Landmarks list, the Archaeological Determinations of Eligibility list, and the California State Historic Resources Inventory list. A summary of the results of the CHRIS records search is included in Attachment A.

## Previously Conducted Studies

The NWIC records search identified 26 previous studies within a 0.5-mile radius of the project site. Of these, none are located within or adjacent to the project site. The NWIC records search also identified one previously-recorded cultural resource.

**Table 1 Previously-Conducted Cultural Resources Studies within 0.5 mile of Project Site**

## Previously Recorded Resources

The NWIC records search identified one previously recorded resource within 0.5 mile of the project site, a historic-era building located outside the project area. No previously recorded cultural resources are located within or adjacent to the project site.

**Table 2 Previously-Recorded Cultural Resources within 0.5 mile of Project Site**

Primary Number	Resource Type	Description	Recorder(s) and Year(s)	Eligibility Status	Relationship to Project Site
P-01-010886	Historic Building	Porter's Market; Lee Brothers Market	D. Supernowicz, 2008	6Y-Determined ineligible for the NR by consensus through the Section 106 process; not evaluated for the CR or local listing	Outside

Sources: NWIC, January 2020

## Native American Heritage Commission and Outreach

As part of the process of identifying cultural resources for this project, Rincon contacted the NAHC on January 2, 2020 and requested an SLF search and a list of Native American tribal organizations and individuals who may have knowledge of sensitive cultural resources in or near the project site. On January 13, 2020, Rincon received a response from the NAHC stating the SLF search results were negative for site-specific information and included a list of seven Native American contacts who may have knowledge of cultural resources in the project site and vicinity. On January 14, 2020, Rincon mailed letters to each of these contacts requesting information regarding cultural resources. As of the date of this memorandum, Rincon has not received any responses from Native American contacts. Appendix B provides the results of the scoping effort.

## Archival and Background Research

Archival research was completed in December 2019 and January 2020 and focused on the review of a variety of primary and secondary source materials relating to the history and development of the project site and its surroundings. Sources included, but were not limited to, historic maps and photographs, contemporary newspaper articles, and written histories of the area. The following is a list of sources consulted in order to conduct research pertaining to the project site.

- Historic aerial photographs accessed digitally via Nationwide Environmental Title Research Online, Inc. and the University of California, Santa Barbara Map & Imagery Lab
- Historic topographic maps accessed digitally via United States Geologic Survey
- Historic newspaper articles accessed digitally via ancestry.com and newspapers.com
- Historic Preservation and Community Design section of the *San Leandro 2035 General Plan*
- Other sources as identified in the References section

## Pedestrian Survey

Rincon Cultural Resource Specialist Hannah Haas, MA, RPA conducted a cultural resources survey of the project site on January 14, 2020. Ms. Haas visually inspected all accessible portions of the project site. Ms. Haas examined exposed ground surface for artifacts (e.g., flaked stone tools, tool-making debris, stone milling tools, ceramics, fire-affected rock) and ecofacts (marine shell and bone). Ms. Haas also looked for soil discoloration that may indicate the presence of a cultural midden, soil depressions, and features indicative of the former presence of structures or buildings (e.g., standing exterior walls, postholes, foundations) or historic debris (e.g., metal, glass, ceramics). Ground disturbances, such as burrows and drainages, were also inspected visually. The survey also consisted of a visual inspection of all built environment features on the property to assess their overall condition and integrity, and to identify and document any potential character-defining features. Observations were recorded using detailed notes and digital photographs. Resources were recorded and evaluated on California Department Parks and Recreation (DPR) 523 series forms, which are included as an attachment.

## Findings

### Archaeological Resources

The records search, Sacred Lands File search, Native American scoping, and pedestrian survey did not identify any archaeological resources on the project site. The entire project site was developed, and ground visibility was obscured by buildings or non-native ornamental vegetation or was inaccessible (Figure 1).

### Historical Resources

The project site contains one building of 45 or more years of age: Manor Bowl, a commercial bowling center with Mid-Century Modern-style architectural elements completed in 1960. A full architectural description and additional historical information is presented in the attached DPR forms. The property is located in the Washington Manor neighborhood of San Leandro, an area that, as historic aerial

photographs reveal, remained primarily agricultural in character as late as 1948 (Netronline 1948). As was the case in communities across California, San Leandro's population boomed during and after World War II, producing new suburban neighborhoods to support the city's growing industrial economy (SLHS 2019; City of San Leandro 2016). Following the war, the area surrounding the project site was developed as the Washington Manor neighborhood. New homes were first advertised in the neighborhood by 1949, and by 1958, the area was fully developed with single-family residences and the Manor Square strip mall (located adjacent to the west of the subject property) (Netronline 1958).

As recently as 1958, the project site was the site of Old Farm Nursery, a commercial nursery owned and operated by brothers Martin and Dudley (sometimes identified as J. Dudley) Knapp, who also ran Knapp and Knapp Nursery in Hayward. By August 1959, Old Farm Nursery had been shuttered and plans were made for the construction of Manor Bowl. It was soon announced that Dudley, as president of Manor Enterprises, would run the bowling alley, while Martin would lead the family's Hayward nursery operation (*Daily Review* 8/7/1960; Hoos 1960). An August 6, 1959 *Oakland Tribune* article reported a groundbreaking ceremony was scheduled to take place that day with a roster of attendees that included San Leandro Mayor Jack Maltester; Chairman of the Alameda County Board of Supervisors, James Dunne; and president of the Metropolitan Oakland Bowling Association, Floyd Parten. At an estimated cost of \$750,000, the facility would be completed with tilt-up construction, a brick exterior, and 20 automatic lanes (*Oakland Tribune* 8/6/1959; *Daily Review* 8/7/1959). It was further reported that "design and decor will be ultra modern, and two acres of free parking will be provided" (*Oakland Tribune* 8/6/1959). Although originally slated to open in December 1959, the bowling center was not ready for business until the following month (*Oakland Tribune* 8/6/1959; 1/5/1960).

Manor Bowl's January 1960 opening coincided with the cresting popularity of multi-use bowling center in suburban America. Bowling had been a popular, if disreputable, form of recreation in cities across the United States since the mid-19th century. Just before World War II, however, a growing number of workplace-affiliated industrial leagues helped to legitimize the pastime, which had long been associated with gambling and rowdiness. Bowling's appeal broadened further during the war years with the establishment of on-base alleys for GIs and leagues for civilian women (OHR 2017; Moruzzi 2016). These developments set the stage for a peacetime boom. Postwar promoters attempted to further distance the sport from its associations with the seedy urban bowling alley by rebranding it as an entertainment activity suitable for suburban families. New design elements were crucial to the sport's revival as family-friendly recreation. The development of automated pin setting and underground ball returns reduced noise and made for a "more relaxing" environment (Moruzzi 2016). Just as important, proprietors introduced the multi-use bowling center as an alternative to the single-purpose bowling alley as the preferred postwar venue. Bowling centers of the 1950s and 1960s, offered such amenities as coffee shops, cocktail lounges, day care facilities, and meeting rooms. Promoted as the "country club of the people," the postwar bowling center played a dual role as recreation venue and social gathering space (OHR 2017; Moruzzi 2016).

Manor Bowl's multi-use amenities reflected the new "country club of the people" approach to bowling center design. Features of the property made it a site of both nighttime entertainment and community engagement. Aside from bowling lanes, the property offered a bar, coffee shop, meeting rooms, and a "kiddie nursery" (*Oakland Tribune* 8/6/ 1959; 1/5/1960). Soon after the bowling center's opening, the Hunt Room cocktail lounge began hosting nightly live music performances by a jazz combo, which offered "jump organ played in the Count Basie style with a banjo lead" (*San Francisco Examiner* 1/21/1960). In addition, a number of items published in the *Oakland Tribune* indicate the local

community and business organizations often rented the bowling center's meeting rooms (newspapers.com var.).

While Manor Bowl's multi-use character was typical of the postwar bowling center property type, its design lacked the architectural flair of many of its contemporaries. Bowling centers of the era were frequently designed in modernistic styles popular in the mid-twentieth century, with many of the most notable buildings exhibiting iterations of the exuberant Googie style. The best examples of Googie-style postwar bowling centers displayed elements such as "sweeping shapes, slick lines, dramatic angles, and futuristic forms, such as parabolas, boomerangs, and domes" (OHR 2017). Manor Bowl's design is comparatively modest and utilitarian. It was constructed with a few architectural elements associated generally with Mid-Century Modern-style design—including a horizontal emphasis, low-slung roof, stack-bond brick cladding, and pattern block screens—but has few other distinguishing architectural features (GEI 2017).

When Manor Bowl opened, it was the second such establishment in San Leandro. Located at 1376 Washington Avenue, San Leandro Bowl was established by 1941, but has since been demolished. However, as a contemporary news item points out, bowling's exploding local popularity made the property one of eight bowling centers "in the immediate area" and was the newest of four completed in the preceding fourteen months (*Oakland Tribune* 5/9/1941; Hoos 1960). A review of the newspaper database newspapers.com offers more evidence of bowling's popularity in the East Bay Area. Specifically, the *Oakland Tribune* consistently reported the results of several amateur league tournaments based at local bowling centers, including Manor Bowl in the early 1960s (newspapers.com var.). Seeking out women's league participants appears to have been one of Manor Bowl's early strategies for capitalizing on the sport's popularity. A January 1960 advertisement for the bowling center's grand opening highlights women's early-bird leagues, a supervised children's play area (the aforementioned "kiddies nursery"), and the proximity of the Manor Shopping Center (*Oakland Tribune* 1/21/1960).

Following the opening of Manor Bowl, Dudley Knapp became involved in local politics. In 1966, he was named general chairman of the campaign of San Leandro City Council candidate Robert T. Brooks (*Daily Review* 3/17/1966). The following year, Knapp resigned from a seat on the Alameda County Parks Advisory Commission (*Daily Review* 2/15/1967). Research for this study found no evidence that he resumed his political career after leaving the Parks Advisory Commission. Dudley, along with his brother Martin and several other partners, still owned Manor Bowl in 1974, when the partnership applied for a license to sell alcoholic beverages at the property (*Daily Review* 10/24/1974).

Nationwide, participation in bowling leagues peaked in the mid-1960s, and the number of bowling centers began a steady decline in the 1970s (White Hutchinson 2020). In spite of this, sometime between 1968 and 1980, Manor Bowl expanded its facility with an addition to the building's east elevation (Netronline 1968; 1980). It is presumed that this addition was built to accommodate new lanes, since Manor Bowl recently advertised its building as a 30-lane facility—ten more than when it opened. City of San Leandro building permit information indicates that, as recently as 2017, Manor Enterprises owned the property (City of San Leandro 2017).

## Evaluation

Manor Bowl is recommended ineligible for listing on the NRHP or CRHR, or for local designation as a City Landmark or Merit Resource under any eligibility criteria. The property was constructed as Manor Bowl in 1960, during the suburban expansion of San Leandro and amid the booming popularity of multi-use bowling centers in postwar America. Research for this study did not suggest the property played an important role in either event or that it was important in any events significant to the history of the city, region, state, or nation. As a result, the property is recommended ineligible for listing in the NRHP or CRHR under Criteria A/1 or for local designation as a City Landmark of Structure of Merit under Criteria A/A.

The individual mostly closely associated with Manor Bowl is Dudley Knapp, a founder of Manor Enterprises and its first president. Research conducted for this study suggested that Knapp enjoyed success in business and local politics, but neither he nor any other individual associated with Manor Bowl made singular historical contributions to local, regional, state, or national history. The property is therefore recommended ineligible for listing in the NRHP or CRHR under Criteria B/2 or for local designation as a City Landmark of Structure of Merit under Criteria B/B.

Architecturally, the property is an undistinguished bowling center with modest Mid-Century Modern-style architectural elements. Generally utilitarian in design, it lacks any distinguishing architectural features suggestive of the best of postwar bowling center design. Because it does not embody the distinctive characteristics of a type, period, or method of construction, represent the work of a master, or possess high artistic values, it is recommended ineligible for listing in the NRHP and CRHR under Criteria C/3 or for local designation as a City Landmark of Structure of Merit under Criteria C/C or D/D.

A review of available evidence and records search results did not indicate the property may yield important information about prehistory or history. As such, it is recommended ineligible for listing for the NRHP and CRHR under Criteria D/D or for local designation as a City Landmark of Structure of Merit under Criteria E/E.

Finally, the property is not recommended eligible for listing as a contributor to any existing or potential historic district.

## Conclusions

As detailed above, Manor Bowl is recommended ineligible for listing in the NRHP or CRHR or for designation as City of San Leandro City Landmark or Structure of Merit. As such, it does not qualify as a historical resource and its demolition would not result in a significant adverse impact as defined by CEQA. Further, the CHRIS records search and a review of City of San Leandro historic resources listings failed to identify any other cultural resources, including historic districts, within close proximity to the project site. No archaeological resources are known to exist in the vicinity of the project site and Rincon did not identify any information to suggest that the project area may be sensitive for archaeological resources. However, unanticipated discoveries during ground disturbance remain a possibility, therefore Rincon recommends standard unanticipated discoveries measure in the event cultural resources are found during project construction. The project is also required to adhere to regulations regarding the unanticipated discovery of human remains, detailed below.

## Unanticipated Discovery of Archaeological Resources

If cultural resources are encountered during ground-disturbing activities, work in the immediate area must halt, and an archaeologist meeting the Secretary of the Interior's Professional Qualifications Standards for archaeology (National Park Service 1983) should be contacted immediately to evaluate the find. If the discovery proves to be significant under CEQA, additional work such as data recovery excavation, Native American consultation, and archaeological monitoring may be warranted to mitigate any significant impacts.

## Unanticipated Discovery of Human Remains

If human remains are found, existing regulations outlined in the State of California Health and Safety Code Section 7050.5 state that no further disturbance shall occur until the County Coroner has made a determination of origin and disposition pursuant to Public Resources Code Section 5097.98. In the event of an unanticipated discovery of human remains, the County Coroner must be notified immediately. If the human remains are determined to be prehistoric, the Coroner will notify the Native American Heritage Commission, which will determine and notify a most likely descendant (MLD). The MLD shall complete the inspection of the site within 48 hours of being granted access and provide recommendations as to the treatment of the remains to the landowner.

Should you have any questions concerning this study, please do not hesitate to contact the undersigned at (510) 834-4455 ext. 9984 or [streffers@rinconconsultants.com](mailto:streffers@rinconconsultants.com).

**Project Description:** The City intends to demolish the Manor Bowl bowling alley and associated parking lot located at 903 Manor Boulevard and construct 39 multi-family townhomes on the 2.1-acre project site. The project would provide approximately 4,850 square feet of common open space and approximately 3,500 square feet of private open space. A garage would contain 78 parking spaces for residents, and there would be another 17 on-site parking spaces.

### Re: 903 Manor Boulevard Residential Project, Alameda County

Dear Ms. Montgomery:

A record search of the Native American Heritage Commission (NAHC) Sacred Lands File (SLF) was completed for the information you have submitted for the above referenced project. The results were negative. However, the absence of specific site information in the SLF does not indicate the absence of cultural resources in any project area. Other sources of cultural resources should also be contacted for information regarding known and recorded sites.

Attached is a list of Native American tribes who may also have knowledge of cultural resources in the project area. This list should provide a starting place in locating areas of potential adverse impact within the proposed project area. I suggest you contact all of those indicated; if they cannot supply information, they might recommend others with specific knowledge. By contacting all those listed, your organization will be better able to respond to claims of failure to consult with the appropriate tribe. If a response has not been received within two weeks of notification, the Commission requests that you follow-up with a telephone call or email to ensure that the project information has been received.

If you receive notification of change of addresses and phone numbers from tribes, please notify me. With your assistance, we can assure that our lists contain current information.

If you have any questions or need additional information, please contact me at my email address: [Nancy.Gonzalez-Lopez@nahc.ca.gov](mailto:Nancy.Gonzalez-Lopez@nahc.ca.gov).

Sincerely,

Nancy Gonzalez-Lopez

Subject: Cultural Resources Study for the 903 Manor Boulevard Residential Project

Dear Chairperson Cerda,

Rincon Consultants, Inc. (Rincon) has been retained by the City of San Leandro to conduct a cultural resources study for the 903 Manor Boulevard Project (project) located in the City of San Leandro. The proposed project involves the demolition of the Manor Bowl bowling alley and associated parking lot and the construction of 39 multi-family townhomes on the 2.1-acre project site. This project is subject to the California Environmental Quality Act (CEQA) and the City of San Leandro is the lead agency. This letter is intended as informal outreach only; consultation under California Assembly Bill 52 of 2014 will be carried out separately by the City of San Leandro.

This letter serves to inquire about your knowledge of potential cultural resources within the vicinity that may be impacted by the project. Rincon contacted the Native American Heritage Commission to request a Sacred Lands File search of the project site that was returned with "negative results". However, we are aware that the results of this search do not negate the possibility of cultural resources existing within the project site.

If you have knowledge of cultural resources that may exist within or near the project site that you wish to be documented in our report, please contact me at (559) 228-9925, extension 3005, or at cmontgomery@rinconconsultants.com. Thank you for your assistance.

Sincerely,  
Rincon Consultants, Inc.

**\*P3a. Description:**

The subject property is a one-story bowling center designed with modest Mid-Century Modern-style architectural elements. Constructed on a sprawling, irregular plan, the building sits on a concrete foundation and culminates in a roof that is primarily low-pitched and side-gabled with composition shingle cladding. On the east-elevation addition the roof is flat and sheeted in rolled composition material. Built of tilt-up construction, the structural concrete walls feature a variety of treatments. The main (south) elevation is clad almost exclusively with a rusticated brick veneer in a staggered stack bond pattern, but also includes a section of pattern-block construction, in addition to vertical wood-plank siding immediately beneath the eaves. Elsewhere, the exterior features a combination of exposed concrete and concrete blocks, rusticated stack-bond brick, and T1-11 siding, affixed with battens on the west elevation. A fixed, metal-sash transom and sidelights surrounding the secondary entrance were the only windows visible at the time of the field survey. Two public entrances face the south, each consisting of commercial-style double doors. At the east end of the main elevation, the primary public entrance is located beneath a gabled canopy with a flat extension. The doors here are likely replacements. A secondary public entry is located at the opposite end of the main elevation. Two additional entrances punctuate the east end of the building and display sliding glass and solid metal double doors, respectively. Ornamental bowling pins are applied intermittently just beneath the main-elevation eaves and in the porch roof gable. A handful of architectural elements suggest the influence of the Mid-Century Modern style, including the low-slung roof, horizontal emphasis, stack-bond brick exterior, and sections of pattern-block wall cladding (GEI 2017). An asphalt-paved parking lot occupies the south two-thirds of the property. Mounted on a pair of round metal posts, the property's commercial sign sits along the Manor Boulevard frontage and features two interior-illuminated elements: a backlit plastic box a smaller reader board. The property is located mid-block on gently sloping terrain. Landscaping is limited to shrubs along the frontage and bushes and small trees tracing the east property line.

Period of Significance N/A Property Type N/A Applicable Criteria N/A

The subject property is Manor Bowl, a commercial bowling center with modest Mid-Century Modern-style architectural elements completed in early 1960. It is located in the Washington Manor neighborhood of San Leandro, an area that, as historic aerial photographs reveal, remained primarily agricultural in character as late as 1948 (Netronline 1948). As was the case in communities across California, San Leandro's population boomed during and after World War II, producing new suburban neighborhoods to support the city's growing industrial economy (SLHS 2019; City of San Leandro 2016). Homes were first advertised in Washington Manor in 1949. By 1958, the area surrounding the subject property was developed with single-family residences, in addition to the Manor Square strip mall located adjacent to the west of the subject property (Netronline 1958).

As late as 1958, the subject property was the site of Old Farm Nursery, a commercial nursery owned and operated by brothers Martin and Dudley (sometimes identified as J. Dudley) Knapp, who also ran Knapp and Knapp Nursery in Hayward. By August 1959, Old Farm Nursery had been shuttered and plans were made for the construction of Manor Bowl. It was soon announced that Dudley, as president of Manor Enterprises, would run the bowling alley, while Martin would lead the family's Hayward nursery operation (*Daily Review* 8/7/1960; Hoos 1960). An August 6, 1959 *Oakland Tribune* article reported a groundbreaking ceremony was scheduled to take place that day with a roster of attendees that included San Leandro Mayor Jack Maltester, Chairman of the Alameda County Board of Supervisors James Dunne, and president of the Metropolitan Oakland Bowling Association Floyd Parten. At an estimated cost of \$750,000, the facility would be completed with tilt-up construction, an aggregate-finish exterior, and 20 automatic lanes (*Oakland Tribune* 8/6/1959; *Daily Review* 8/7/1959). It was reported further that "design and decor will be ultra modern, and two acres of free parking will be provided" (*Oakland Tribune* 8/6/1959). Although the originally slated to open in December, the bowling center was not ready for business until the following month (*Oakland Tribune* 8/6/1959; 1/5/1960). **See continuation sheet, p. 4.**

**B10. Significance (continued):**

Manor Bowl's January 1960 opening coincided with the cresting popularity of multi-use bowling center in suburban America. Bowling had been a popular, if disreputable, form of recreation in cities across the United States since the mid-19th century. Just before World War II, however, a growing number of workplace-affiliated industrial leagues helped to legitimize the pastime, which had long been associated with gambling and rowdiness. Bowling's appeal broadened further during the war years with the establishment of on-base alleys for GIs and leagues for civilian women (OHR 2017; Moruzzi 2016). These developments set the stage for a peacetime boom. Postwar promoters attempted to further distance the sport from its associations with the seedy urban bowling alley by rebranding it as an entertainment activity suitable for suburban families. New design elements were crucial to the sport's revival as family-friendly recreation. The development of automated pin setting and underground ball returns reduced noise and made for a "more relaxing" environment (Moruzzi 2016). Just as important, proprietors introduced the multi-use bowling center as an alternative to the single-purpose bowling alley as the preferred postwar venue. Bowling centers of the 1950s and 1960s, offered such amenities as coffee shops, cocktail lounges, day care facilities, and meeting rooms. Promoted as the "country club of the people," the postwar bowling center played a dual role as recreation venue and social gathering space (OHR 2017; Moruzzi 2016).

Manor Bowl's multi-use amenities reflected the new "country club of the people" approach to bowling center design. Features of the property made it a site of both nighttime entertainment and community engagement. Aside from bowling lanes, the property offered a bar, coffee shop, meeting rooms, and a "kiddie nursery" (*Oakland Tribune* 8/6/ 1959; 1/5/1960). Soon after the bowling center's opening, the Hunt Room cocktail lounge began hosting nightly live music performances by a jazz combo, which offered "jump organ played in the Count Basie style with a banjo lead" (*San Francisco Examiner* 1/21/1960). In addition, a number of items published in the *Oakland Tribune* indicate the local community and business organizations often rented the bowling center's meeting rooms (newspapers.com var.).

While Manor Bowl's multi-use character was typical of the postwar bowling center property type, its design lacked the architectural flair of many of its contemporaries. Bowling centers of the era were frequently designed in modernistic styles popular in the mid-twentieth century, with many of the most notable buildings exhibiting iterations of the exuberant Googie style. The best examples of Googie-style postwar bowling centers displayed elements such as "sweeping shapes, slick lines, dramatic angles, and futuristic forms, such as parabolas, boomerangs, and domes" (OHR 2017). Manor Bowl's design is comparatively modest and utilitarian. It was constructed with a few architectural elements associated generally with Mid-Century Modern-style design—including a horizontal emphasis, low-slung roof, stack-bond brick cladding, and pattern block screens—but has few other distinguishing architectural features (GEI 2017).

When Manor Bowl opened, it was the second such establishment in San Leandro. Located at 1376 Washington Avenue, San Leandro Bowl was established by 1941, but has since been demolished. However, as a contemporary news item points out, bowling's exploding local popularity made the property one of eight bowling centers "in the immediate area" and was the newest of four completed in the preceding fourteen months (*Oakland Tribune* 5/9/1941; Hoos 1960). A review of the newspaper database newspapers.com offers more evidence of bowling's popularity in the East Bay Area. Specifically, the *Oakland Tribune* consistently reported the results of several amateur league tournaments based at local bowling centers, including Manor Bowl in the early 1960s (newspapers.com var.). Seeking out women's league participants appears to have been one of Manor Bowl's early strategies for capitalizing on the sport's popularity. A January 1960 advertisement for the bowling center's grand opening highlights women's early-bird leagues, a supervised children's play area (the aforementioned "kiddies nursery"), and the proximity of the Manor Shopping Center (*Oakland Tribune* 1/21/1960).

Following the opening of Manor Bowl, Dudley Knapp became involved in local politics. In 1966, he was named general chairman of the campaign of San Leandro City Council candidate Robert T. Brooks (*Daily Review* 3/17/1966). The following year, Knapp resigned from a seat on the Alameda County Parks Advisory Commission (*Daily Review* 2/15/1967). Research for this study found no evidence that he resumed his political career after leaving the Parks Advisory Commission. Dudley, along with his brother Martin and several other partners, still owned Manor Bowl in 1974, when the partnership applied for a license to sell alcoholic beverages at the property (*Daily Review* 10/24/1974).

Nationwide, participation in bowling leagues peaked in the mid-1960s, and the number of bowling centers began a steady decline in the 1970s (White Hutchinson 2020). In spite of this, sometime between 1968 and 1980, Manor Bowl expanded its facility with an addition to the building's east elevation (Netronline 1968; 1980). It is presumed that this addition was built to accommodate new lanes, since Manor Bowl recently advertised its building as a 30-lane facility—ten more than when it opened. City of San Leandro building permit information indicates that, as recently as 2017, Manor Enterprises owned the property (City of San Leandro 2017).

*Evaluation of Significance*

The subject property is recommended ineligible for listing on the National Register of Historic Places (NRHP) or the California Register of Historical Resources (CRHR) or for local designation as a City Landmark or Merit Resource under any eligibility criteria. The property was constructed as Manor Bowl in 1960, during the suburban expansion of San Leandro and amid the booming popularity of multi-use bowling centers in postwar America. Research for this study did not suggest the property played an important role in either event or that it was important in any events significant to the history of the city, region, state, or nation. As a result, the property is recommended ineligible for listing in the NRHP or CRHR under Criteria A/1 or for local designation as a City Landmark of Structure of Merit under Criteria A/A.

The individual mostly closely associated with Manor Bowl is Dudley Knapp, a founder of Manor Enterprises and its first president. Research conducted for this study suggested that Knapp enjoyed success in business and local politics, but neither he nor any other individual associated with Manor Bowl made singular historical contributions to local, regional, state, or national history. The property is therefore recommended ineligible for listing in the NRHP or CRHR under Criteria B/2 or for local designation as a City Landmark of Structure of Merit under Criteria B/B. **See continuation sheet, p. 5.**

\*Date: January 15, 2020

■ Continuation □ Update

**B10. Significance (continued):**

Architecturally, the property is an undistinguished bowling center with modest Mid-Century Modern-style architectural elements. Generally utilitarian in design, it lacks any distinguishing architectural features suggestive of the best of postwar bowling center design. Because it does not embody the distinctive characteristics of a type, period, or method of construction, represent the work of a master, or possess high artistic values, it is recommended ineligible for listing in the NRHP and CRHR under Criteria C/3 or for local designation as a City Landmark of Structure of Merit under Criteria C/C or D/D.

A review of available evidence and records search results did not indicate the property may yield important information about prehistory or history. As such, it is recommended ineligible for listing for the NRHP and CRHR under Criteria D/D or for local designation as a City Landmark of Structure of Merit under Criteria E/E.

Finally, the property is not recommended eligible for listing as a contributor to any existing or potential historic district.

Geotechnical Feasibility Evaluation

# QUANTUM GEOTECHNICAL INC.

Project No. E036.G  
November 5, 2019

Mr. Dennis Hudspeth  
Vice President Land Development  
D.R. Horton  
6683 Owens Drive  
Pleasanton, CA 94588

**Subject:** Proposed Residential Development  
Manor Bowl  
Manor Boulevard  
San Leandro, California  
**RESPONSE TO CITY COMMENTS REGARDING BIORETENTION AREAS**

- References:
1. City of San Leandro Comments  
Dated August 19, 2019
  2. Geotechnical Investigation Report  
By Quantum Geotechnical, Inc.,  
Dated September 10, 2019
  3. Vesting Tentative Map  
Tract 8519 – Maple Lane  
Sheets TM1.0, TM2.0, TM3.0, TM4.0. TM5.0  
Dated September 13, 2019

Dear Mr. Hudspeth,

At your request, we are responding herein to the City of San Leandro plan check comments of reference 1, regarding the bioretention areas presented in reference 3.

The referenced soil report provided recommendations for various improvements located adjacent bioretention areas, including building foundations. Based on our review, the plans of reference 3, including the sections presented in Sheet TM5.0, have properly incorporated the recommendations of the geotechnical report of reference 2.

We trust these comments are sufficient for your purposes. Should you have any questions or require additional information, please contact our office at your convenience.

Sincerely,  
*Quantum Geotechnical, Inc.*

  
Simon Makdessi, P.E., G.E.  
President

# QUANTUM GEOTECHNICAL INC.

Project No. E036.G  
September 10, 2018

Mr. Dean Mills  
6683 Owens Drive  
Pleasanton, CA 94588

**Subject:** Proposed Residential Development  
Manor Bowl  
Manor Boulevard  
San Leandro, California  
**PRELIMINARY FEASIBILITY EVALUATION**

Dear Mr. Mills,

At your request, we have commenced a design level geotechnical investigation, and are providing herein a preliminary feasibility evaluation. The borings have been completed and laboratory testing is in progress. The purpose of our feasibility evaluation was to identify if any geotechnical constraints exist on the site that may affect the design or construction of the proposed development.

## **PROJECT DESCRIPTION**

It is our understanding that the proposed project consists of developing the site for the construction of a multi-family townhome development. The development layout is currently in progress and currently consists of 40 units within 6 buildings. Associated improvements consist of interior streets and utilities. Grading details are not known but are anticipated to consist of cuts and fills of the order of 2 feet or less. The building structures are anticipated to consist of wood frame construction, supported on a post-tensioned slab foundation.

## **SITE DESCRIPTION**

The site is located in the south western part of San Leandro within the alluviated flatlands, west of Highway 880, as approximately shown on Figure 1, "Site Vicinity and Fault Map", attached. The site is bounded to the north and east by residential neighborhoods, to the south by Manor

Boulevard, and to the west by an existing commercial/retail center. The site is rectangularly shaped, approximately 2.1 acres in size and is relatively flat. The site is currently occupied by a single story building used for a bowling alley, in the northern part of the site and associated asphaltic concrete parking area in the southern part of the site. The building exterior was observed to consist of masonry block construction, stone veneer, and reinforced concrete. Based on site grades, the building pad was created by placing 2 to 3 feet of fill. The surface of the area between the building and property lines at the northern end of the site consists of soil that is lower than the adjacent property grades, indicating soil material was cut in the northern half of the site to create the raised pad portion of the building. The asphalt surfacing of the parking area was observed to be in a poor condition with numerous alligator cracking throughout.

Vegetation consisted of shrubs in local planter areas on the south and east sides of the parking area.

## **GEOLOGIC SETTING**

The site is located within the Coast Ranges Geomorphic Province of California. Throughout the Cenozoic Era, the western part of California has been affected by tectonic forces associated with lateral or transform plate motion between the North American and Pacific crustal plates, which has produced a complex system of northwest-trending faults - the San Andreas, Hayward, and Calaveras Fault systems being the most prominent (Page, 1998). Uplift, erosion, and subsequent re-deposition of rocks within this province have been driven primarily by the northwest-southeast directed, strike-slip movement of the tectonic plates and the associated northeast oriented compressional stress. The northwest-trending coastal mountain ranges, which generally follow the trend of the major fault systems, are the result of an orogeny believed to have been occurring since the Pleistocene epoch (approximately 2-3 million years before present).

The site is underlain by Holocene age alluvium within the low elevation flatlands west of the Diablo Mountain Range. This alluvium will be of variable consolidation, with many areas of young deposits which will tend to be loose and soft. Generally, the soil encountered is expected to be silty clay, with sand and gravel lenses dispersed throughout. The regional geologic map of Graymer (2000) indicates that the site lies within a natural levee deposit, and is bounded by basin

deposits to the west and alluvial fan deposits to the east. These deposits, as with most surficial deposits west of the Hayward Fault Zone, are Holocene in age.

The California Geological Survey, Seismic Hazard Zones Map, for the San Leandro Quadrangle (2003) indicates the site lies within an area of liquefaction potential. According to this report, the historically high groundwater level within the vicinity is 10 feet or less below ground surface.

The site is located within proximity of several significant bay area fault systems, as indicated on Figure 1, "Site Vicinity and Fault Map", attached. A review of the USGS interactive fault database (<https://earthquake.usgs.gov/hazards/qfaults/map/#qfaults>) indicates that the nearest Quaternary active faults are: the Holocene-active Hayward Fault, 2.0 miles northeast of the site, the Chabot Fault, 3.35 miles northeast, and the Miller Creek Fault, 6.3 miles northeast. According to the CGS special studies zone map for the San Leandro quadrangle, the site is not located within an AP-zone for required investigation of fault surface rupture hazards.

## **SUBSURFACE CONDITIONS**

On September 8, 2018, Quantum Geotechnical, Inc., advanced a total of three borings at the locations shown on the attached Figure 3, "Site Plan". The borings ranged in depth from 26.5 feet to 46.5 feet below ground surface. Subsurface soil conditions were somewhat consistent in nature and consistency, however were highly variable in color and soil composition detail. The near surface clay soil is highly expansive.

In general the subsurface conditions encountered in the three borings, consisted of stiff silty clay to 10 feet depth, underlain by 10 feet of firm silty clay to 20 feet depth where stiff silty clay was encountered to the maximum depth explored of 46.5 feet.

In boring Q-1, a heavy concentration of roots with some soil and 2 inch size gravel was encountered from 2 to 5 feet. From 5 to 8 feet depth, mainly loose 2 to 3 inch size gravel was encountered. An additional short boring was advanced 7 feet south, and native soil was encountered below the pavement, indicating the organically contaminated gravelly soil fill is localized in extent.

Groundwater was encountered at depths ranging from 11 to 11.5 foot depth at the time of our investigation. Fluctuations in the groundwater table may occur, due to tidal influences, seasonal rainfall and urbanization.

## PRELIMINARY GEOTECHNICAL FEASIBILITY EVALUATION

Based on our research, review of available data, site reconnaissance, and subsurface investigation development of the site appears feasible from a geotechnical viewpoint.

Due to the proximity of the site area to several nearby active faults, strong ground shaking could occur at the site as a result of an earthquake on any one of the faults. The structures can be properly designed using the current standard of practice for seismic loading criteria.

The deep boring did not encounter layers of loose sandy soil below the groundwater table, and therefore the potential for liquefaction is nil.

Based on the borings performed and our site observations, the prominent geotechnical features of the site are the presence of;

- i) A localized area of debris/fill that appears to be associated with an old tree root ball system, that extends to a depth of 8 feet.
- ii) An area of fill placed to create the building pad, the extent of which was determined by observation local topography variations, as approximately shown on the attached site plan. The depth of the fill is not precisely known but appears to be of the order of 2 to 3 feet.
- iii) Near surface highly expansive clay.
- iv) High groundwater table that may potentially affect deep utility trenches.

Standard grading practices are expected for mass grading, however, subexcavation of the old fill associated with grading of the existing building pad, as approximately shown on the site plan, will be required.

Standard construction practices are anticipated for underground utility construction, however, utility trenches deeper than 10 feet may require dewatering and stabilization of trench bottom.

The near surface expansive soil can be accounted for in the design and construction of foundations, miscellaneous concrete flatwork and pavements.

A post-tensioned slab foundation is the preferred foundation system to support the residential townhome structures, and is acceptable for the site. The post tension slabs will be designed to tolerate the near surface expansive soil movements.

We trust these comments are sufficient for your purposes. Should you have any questions or require additional information, please contact our office at your convenience.

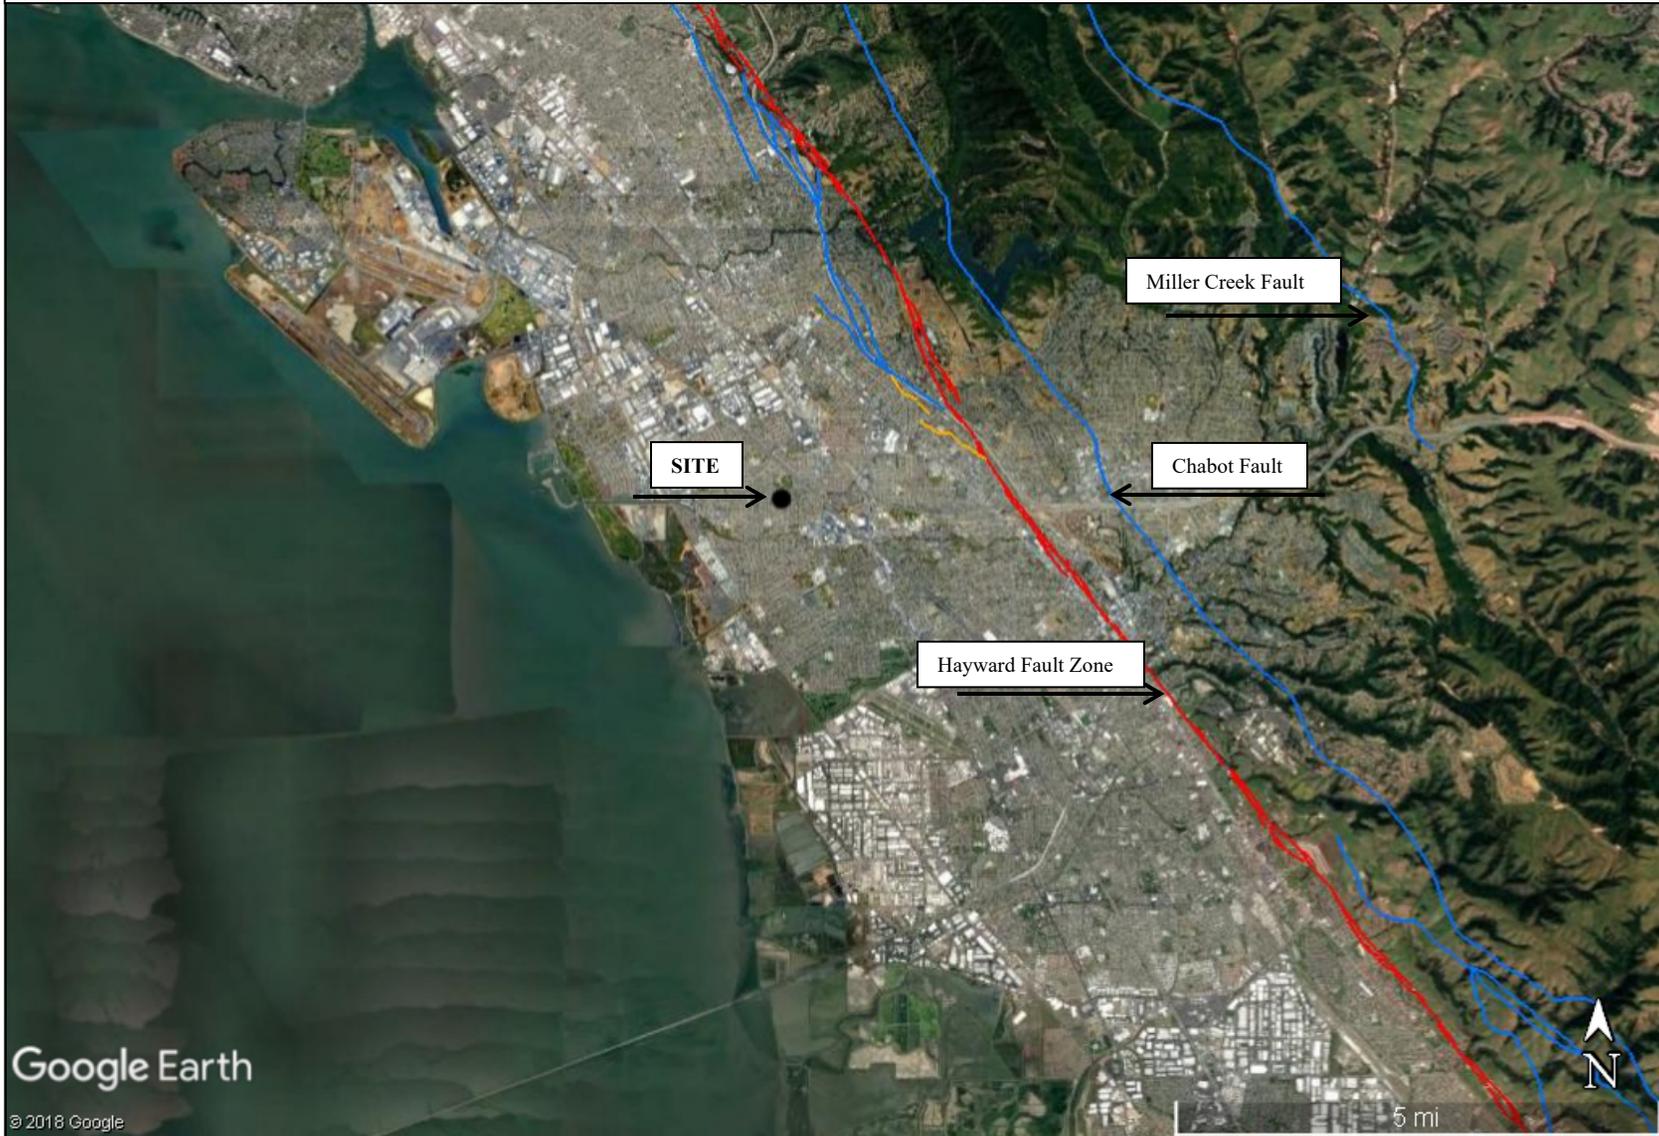

Sincerely,  
***Quantum Geotechnical, Inc.***

**COLUMN DESCRIPTIONS**

- 1** Elevation (feet): Elevation (MSL, feet).
- 2** Depth (feet): Depth in feet below the ground surface.
- 3** Sample Type: Type of soil sample collected at the depth interval shown.
- 4** Sample Number: Sample identification number.
- 5** Sampling Resistance, blows/ft: Number of blows to advance driven sampler one foot (or distance shown) beyond seating interval using the hammer identified on the boring log.
- 6** Material Type: Type of material encountered.
- 7** Graphic Log: Graphic depiction of the subsurface material encountered.
- 8** MATERIAL DESCRIPTION: Description of material encountered. May include consistency, moisture, color, and other descriptive text.
- 9** Water Content, %: Water content of the soil sample, expressed as percentage of dry weight of sample.
- 10** Dry Unit Weight, pcf: Dry weight per unit volume of soil sample measured in laboratory, in pounds per cubic foot.
- 11** Percent Fines: The percent fines (soil passing the No. 200 Sieve) in the sample. WA indicates a Wash Sieve, SA indicates a Sieve Analysis.
- 12** LL, %: Liquid Limit, expressed as a water content.
- 13** PI, %: Plasticity Index, expressed as a water content.

**FIELD AND LABORATORY TEST ABBREVIATIONS**

- CHEM: Chemical tests to assess corrosivity
- COMP: Compaction test
- CONS: One-dimensional consolidation test
- LL: Liquid Limit, percent
- PI: Plasticity Index, percent
- SA: Sieve analysis (percent passing No. 200 Sieve)
- UC: Unconfined compressive strength test, Qu, in ksf
- WA: Wash sieve (percent passing No. 200 Sieve)

**MATERIAL GRAPHIC SYMBOLS**

-  Lean CLAY, CLAY w/SAND, SANDY CLAY (CL)
-  Clayey SAND (SC)

**TYPICAL SAMPLER GRAPHIC SYMBOLS**

-  2.5-inch-OD Modified California w/ brass liners

**OTHER GRAPHIC SYMBOLS**

-  Water level (at time of drilling, ATD)
-  Water level (after waiting)
-  Minor change in material properties within a stratum
-  Inferred/gradational contact between strata
-  Queried contact between strata

**GENERAL NOTES**

- 1: Soil classifications are based on the Unified Soil Classification System. Descriptions and stratum lines are interpretive, and actual lithologic changes may be gradual. Field descriptions may have been modified to reflect results of lab tests.
- 2: Descriptions on these logs apply only at the specific boring locations and at the time the borings were advanced. They are not warranted to be representative of subsurface conditions at other locations or times.

**Subject: PHASE I ENVIRONMENTAL SITE ASSESSMENT REPORT OF FINDINGS**  
Manor Bowl  
903 Manor Boulevard  
San Leandro, Alameda County, California 94579  
Tetra Tech Project Number: 212C-HN-D1901-BAD0541A

Dear Mr. Perez,

Tetra Tech, Inc. (Tetra Tech) is pleased to submit this Phase I Environmental Site Assessment (ESA) Report of Findings (ROF) for the above-referenced property. This report has been prepared and is intended for the sole and exclusive use of D.R. Horton, Inc. (DHI) for the purpose of obtaining project approval from the City of San Leandro. The findings and conclusions presented herein are based upon the review of information, which was readily available at the time of our investigation, our interpretation of available data and our experience on similar projects.

This report was prepared in accordance with the requirements of the American Society for Testing and Materials International (ASTM) E 1527-13 Standard Practice for Environmental Site Assessments Phase I Environmental Site Assessment Process (E1527-13) and the requirements for satisfying "All Appropriate Inquiries" (as set forth in 40 Code of Federal Regulations (CFR) 312 et seq.; "AAI"). In meeting the objectives of E1527-13 and as a material requirement of 40 CFR 312.21(d) regarding requisite requirements of the environmental professional engaged in the preparation of this report, Tetra Tech represents as follows:

*We declare that, to the best of our professional knowledge and belief, we meet the definition of "environmental professional" as defined in Section 312.10 of 40 CFR 312. We have the specific qualifications based on education, training, and experience to assess a property of the nature, history and setting of the target property. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.*

Tetra Tech appreciates the opportunity to be of service to you. Please contact us if you have questions or if we may be of further service.

Sincerely,

**TETRA TECH, INC.**

Keith D. Bell, P.G.  
Program Manager

Nicolas Richardson  
Project Manager

**EXECUTIVE SUMMARY**  
Manor Bowl  
903 Manor Boulevard  
San Leandro, Alameda County, California 94579

D.R. Horton, Inc. (DHI) engaged Tetra Tech, Inc. (Tetra Tech) to perform a Phase I Environmental Site Assessment (ESA) of the above-referenced property in conformance within the scope and limitations of the American Society for Testing and Materials International (ASTM) Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process (E1527-13) and the requirements of “All Appropriate Inquiries” (AAI, at 40 CFR 312 *et seq.*). This study for the proposed Manor Bowl residential development (target property) was authorized by Mr. Timothy Zoch and confirmed by issue of Tetra Tech Project Number 212C-HN-D1901-BAD0541A on September 4, 2019.

**PROPERTY DESCRIPTION**

The proposed Manor Bowl residential development (target property) currently consists of approximately 2 acres of commercial land located in the vicinity of latitude 37.691984 degrees north and longitude 122.146445 degrees west in San Leandro, Alameda County, California. Access to the target property is from the south via Manor Boulevard.

**SITE AND AREA RECONNAISSANCE**

Tetra Tech understands that DHI is under contract to purchase approximately 2 acres of commercial land which will comprise the proposed Manor Bowl residential development. At the time of the site reconnaissance, the target property was improved with a commercial building utilized as a bowling alley, an asphalt-paved parking lot, storm water drains, and municipal utilities. The building was a wood and concrete-framed structure with brick and wood siding, an asphalt shingle roof, and a concrete slab foundation. The interior floors consisted of linoleum, tile, carpet, and concrete. The interior walls and ceilings were constructed of concrete, wood, and drywall. The building contained multiple bowling lanes, maintenance areas, a kitchen, a bar, community rooms, locker room, laundry room, storage rooms, two restrooms, and sitting areas. The bowling alley was heated and cooled by a heating, ventilation, and air conditioning (HVAC) unit located in the northern portion of the building.

A 55-gallon metal drum of cooking oil, a concrete slab foundation, and dumpsters were observed along the western exterior of the building, while an exterior storage area and miscellaneous wood and plastic debris were noted along the northwestern exterior. A pad-mounted transformer was observed on the northwestern portion of the target property. The transformer was not labeled for polychlorinated biphenyl (PCB) content but was observed to be in good condition with no evidence of staining or leaks. The maintenance area and laundry room contained various paint products, maintenance fluids, industrial cleaners, bowling machine parts, electric motors, and equipment. In addition, a grease trap was noted within the kitchen area. No staining, distressed vegetation, or other concerns were noted in association with the hazardous material containers or grease trap observed at the target property; however, *de minimis* vehicle fluid staining from the parking of vehicles was noted throughout the surface of the asphalt-paved parking lot. Additionally, storm water drains were observed throughout the target property, while overhead electrical lines were observed along the western target property boundary.

No active earthwork or site development activities were observed at the target property during the site reconnaissance; therefore, implementation of construction-related erosion control, storm water compliance, and best management practices (BMPs) are not required at this time.

The target property was bordered to the north by single-family residences, with Washington Manor Park beyond. To the east, the target property was bordered by single-family residences, with Norton Street and additional single-family residences beyond. The target property was bordered to the south by Manor Boulevard, with single-family residences and a multi-family residential complex beyond. To the west, the target property was bordered by Manor Square Shopping Center and a multi-family residential complex, with Zelma Street and single-family residences beyond.

Tetra Tech's site reconnaissance did not reveal evidence of recognized environmental conditions (RECs) for the target property.

## **HISTORICAL REVIEW**

Tetra Tech's review of historical aerial photographs and other historical information suggests that the target property and surrounding areas were predominantly vacant and agricultural land with scattered rural residential properties from at least 1939 until at least 1946. Agricultural chemicals may have been applied to portions of the target property during periods of historical agricultural production. However, the normal use and application of agricultural chemicals generally does not trigger enforcement actions, assessments

by regulatory agencies, or the recommendation for further assessment of the target property unless there is evidence indicating misuse, dumping, or improper storage of chemicals. Tetra Tech's review of the target property's previous agricultural use did not identify indications or the likelihood of these types of activities, or evidence of agricultural chemical mixing, large quantity storage, or materials processing on or around the target property.

Tetra Tech's historical review did not reveal evidence of RECs for the target property.

## **REGULATORY REVIEW**

Tetra Tech's review of available regulatory information and area reconnaissance did not indicate on-site or off-site RECs or Vapor Encroachment Conditions (VECs) to the target property.

## **ON-SITE CONDITIONS**

Tetra Tech did not identify on-site RECs or VECs to the target property.

## **OFF-SITE CONDITIONS**

Tetra Tech did not identify off-site RECs or VECs to the target property.

## **FINDINGS AND CONCLUSIONS**

Tetra Tech conducted this assessment of the target property in conformance with the scope and limitations of ASTM E 1527-13 standard and AAI to identify RECs in connection with the property, including the presence, or likely presence, of hazardous substances or petroleum products in, on or at the property, due to any release to the environment, under conditions indicative of a release to the environment, or under conditions that pose a material threat of future release to the environment. This assessment included an evaluation to the extent practicable of the past and present land uses at the target property and on adjacent properties.

The results of this assessment have identified no evidence of on-site or off-site RECs for the target property. No further assessment is warranted at this time.

This executive summary is presented for convenience only. While the executive summary is an integral part of the report, it should not be used in lieu of reading the entire report, including the appendices.

## 1.0 INTRODUCTION

D.R. Horton, Inc. (DHI) engaged Tetra Tech, Inc. (Tetra Tech) to perform a Phase I Environmental Site Assessment (ESA) for the Santa Rosa Highlands residential development (target property). The purpose of the ESA is to identify recognized environmental conditions (RECs) resulting from practices and activities that have occurred on the target property or adjacent sites that could potentially contaminate the target property. This assessment was conducted in conformance with the scope and limitations of the American Society for Testing and Materials International (ASTM) Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process (E1527-13) and the requirements of “All Appropriate Inquiries” (AAI, at 40 CFR 312 *et seq.*). This study for the target property was authorized by Mr. Tim Zoch and confirmed by issue of Tetra Tech Project Number 212C-HN-D1901-BAD0541A on September 4, 2019.

The scope of services for this assessment included the following:

- A site and area reconnaissance to visually characterize the target property and surrounding areas and identify obvious indications of present activities that have or could have contaminated the target property.
- An interview with the property owner and/or other pertinent individuals to assist in determining the past uses of the target property and contacting local and/or municipal agencies to determine if the target property or nearby properties are listed as having a past or present environmental condition, are under investigation, or are regulated by state, federal, or local environmental regulatory officials.
- A review of readily available historical information including past environmental reports published by others, topographic maps, published soils reports, geology, and hydrogeology information of the target property and/or general vicinity to assist in characterizing the area surface and subsurface drainage, and identifying obvious indications of past or present activities that have or could have contaminated the target property.
- A review of information published by federal, state, municipal, and/or local regulatory agencies obtained from respective databases for the target property and surrounding properties.

- An assessment of issues identified by ASTM E 1527-13 as “non-scope considerations.”
- Preparation of this report which presents Tetra Tech’s findings and conclusions.

Tetra Tech’s scope of services did not include sampling of the soil, groundwater, or soil vapor at the target property.

### 1.1 EXCEPTIONS, DEVIATIONS, AND LIMITATIONS

During the course of this investigation, no exceptions, deviations, or limitations from the scope of work in the form of “data gaps” (as described in AAI) were encountered with the exception of the following:

- Time gaps of more than five years were noted in available historical information. Tetra Tech does not believe that this deviation precludes the ability to render an opinion regarding potential RECs or *de minimis* conditions for the target property or the findings and conclusions of this report.
- An Environmental Lien Search was not conducted by Tetra Tech as part of this assessment. DHI conducts title and recordation research as part of its internal legal review process. In the event an environmental issue is discovered during internal review of title, Tetra Tech would be notified by DHI and an investigation would be conducted by Tetra Tech to determine the cause of the issue. Tetra Tech received no such notification during the course of its ESA and therefore concludes that information obtained through DHI’s internal legal review meets the criteria of the Environmental Lien Search as prescribed by ASTM E 1527-13.
- Property tax files, building department records, zoning/land use records, and local street directories were not obtained as part of this assessment, unless otherwise specified in the body of the report. These historical sources typically require a physical street address which may or may not exist for the target property.
- A user questionnaire was provided to the current seller or seller representative; however, the completed questionnaire has not been received.

In summary, Tetra Tech concludes that none of the above-identified data gaps are likely to alter the findings and conclusions of this report.

## **2.0 SITE AND AREA RECONNAISSANCE**

The site and area reconnaissance was conducted on foot, unless otherwise noted, by Ms. Jodi Gunning of Tetra Tech on September 13, 2019. Maps, which illustrate the general location and configuration of the target property, are presented as Figures 1 and 2, respectively. Site and area reconnaissance photographs are provided in Appendix A. The resumes of the environmental assessors conducting the site visit and preparing the report are provided in Appendix B.

### **2.1 SITE RECONNAISSANCE**

Tetra Tech understands that DHI is under contract to purchase approximately 2 acres of commercial land which will comprise the proposed Manor Bowl residential development. At the time of the site reconnaissance, the target property was improved with a commercial building utilized as a bowling alley, an asphalt-paved parking lot, storm water drains, and municipal utilities. The building was a wood and concrete-framed structure with brick and wood siding, an asphalt shingle roof, and a concrete slab foundation. The interior floors consisted of linoleum, tile, carpet, and concrete. The interior walls and ceilings were constructed of concrete, wood, and drywall. The building contained multiple bowling lanes, maintenance areas, a kitchen, a bar, community rooms, locker room, laundry room, storage rooms, two restrooms, and sitting areas. The bowling alley was heated and cooled by a heating, ventilation, and air conditioning (HVAC) unit located in the northern portion of the building.

A 55-gallon metal drum of cooking oil, a concrete slab foundation, and dumpsters were observed along the western exterior of the building, while an exterior storage area and miscellaneous wood and plastic debris were noted along the northwestern exterior. A pad-mounted transformer was observed on the northwestern portion of the target property. The transformer was not labeled for polychlorinated biphenyl (PCB) content but was observed to be in good condition with no evidence of staining or leaks. The maintenance area and laundry room contained various paint products, maintenance fluids, lane conditioner bottles, industrial cleaners, bowling machine parts, electric motors, and equipment. In addition, a grease trap was noted within the kitchen area. No staining, distressed vegetation, or other concerns were noted in association with the hazardous material containers or grease trap observed at the target property; however, *de minimis* vehicle fluid staining from the parking of vehicles was noted throughout the surface of the asphalt-paved parking lot. Additionally, storm water drains were observed throughout the target property, while overhead electrical lines were observed along the western target property boundary.

No active earthwork or site development activities were observed at the target property during the site reconnaissance; therefore, implementation of construction-related erosion control, storm water compliance, and best management practices (BMPs) are not required at this time.

Table 1 summarizes conditions observed on the target property during the site reconnaissance. A discussion describing the significance of each observed condition and results of its evaluation with respect to the target property follows.

**TABLE 1**  
**Conditions Observed During Site Reconnaissance**

<b>On-Site Conditions / Appurtenances</b>	<b>Observed</b>
Underground Storage Tanks	No
Aboveground Storage Tanks	No
Hazardous Substances and Petroleum Products	<b>Yes</b>
Hazardous Wastes	No
Landfills, Dumps, Waste Burials, and Solid Waste	<b>Yes</b>
Utilities	<b>Yes</b>
Potable Water Supply and Wells	<b>Yes</b>
Wastewater, Sewage Disposal, and Septic Systems	<b>Yes</b>
Potential Polychlorinated Biphenyl Equipment	<b>Yes</b>
HVAC Systems	<b>Yes</b>
Pits, Ponds, Lagoons, and Other Surface Waters	No
Drains, Sumps, Cisterns, and Cesspools	<b>Yes</b>
Stains or Corrosion and Stained Soil or Pavement	<b>Yes</b>
Dead, Distressed, Discolored, or Stained Vegetation	No
Odors	No
Oil and Gas Wells, Pipelines, and Mine Shafts	No
Structures	<b>Yes</b>

**2.1.1 Hazardous Substances and Petroleum Products**

The maintenance area, laundry room, and exterior storage areas contained various paint products, maintenance fluids, lane conditioner bottles, industrial cleaners, bowling machine parts, electric motors, and equipment. In addition, a grease trap was observed within the kitchen area, and a 55-gallon metal drum of cooking oil was observed along the western exterior of the on-site building. No staining, distressed

vegetation, or other concerns were noted in association with the hazardous material containers or grease trap observed at the target property.

### **2.1.2 Landfills, Dumps, Waste Burials, and Solid Waste**

Two dumpsters were observed along the western exterior of the on-site building, while miscellaneous wood and plastic debris were noted along the northwestern exterior. No staining, distressed vegetation, or other concerns were noted in association with the dumpsters and debris observed at the target property. No evidence of landfills, dumps, or waste burials were observed on the target property during Tetra Tech's site reconnaissance.

### **2.1.3 Utilities**

Electricity was provided to the target property by Pacific Gas and Electric Company (PG&E). Overhead electrical lines were observed along the western target property boundary.

### **2.1.4 Potable Water Supply and Wells**

Potable water is provided to the target property by East Bay Municipal Utility District. No evidence of water wells was observed during Tetra Tech's site reconnaissance.

### **2.1.5 Wastewater, Sewage Disposal, and Septic Systems**

Wastewater and sewage disposal services are provided to the target property by East Bay Municipal Utility District. No evidence of a septic system was observed during Tetra Tech's site reconnaissance.

### **2.1.6 Potential Polychlorinated Biphenyl Equipment**

Electrical transformers are often a source of environmental concern due to the potential presence of PCB-containing cooling oils used in some units. Equipment containing hydraulic oil may also contain PCBs. Utility companies will typically respond to reported spills associated with their equipment. A pad-mounted transformer was observed on the northwestern portion of the target property. The transformer was not labeled for PCB content but was observed to be in good condition with no evidence of staining or leaks.

### **2.1.7 Heating, Ventilation, and Air Conditioning Systems**

A heating, ventilation, and air conditioning (HVAC) unit was located in the northern portion of the building.

### **2.1.8 Drains, Sumps, Cisterns, and Cesspools**

Storm water drains were observed throughout the target property. No sumps, cisterns, or cesspools were observed during Tetra Tech’s site reconnaissance.

### **2.1.9 Stains or Corrosion and Stained Soil or Pavement**

*De minimis* vehicle fluid staining from the parking of vehicles was noted throughout the surface of the asphalt-paved parking lot.

### **2.1.10 Structures**

At the time of Tetra Tech’s site reconnaissance, the target property was improved with a commercial building utilized as a bowling alley.

## **2.2 AREA RECONNAISSANCE**

An area reconnaissance was performed to identify visual indications of present or past activities that have or could have contaminated the target property. The area reconnaissance was conducted by automobile, and/or on foot, unless otherwise noted.

The target property was bordered to the north by single-family residences, with Washington Manor Park beyond. To the east, the target property was bordered by single-family residences, with Norton Street and additional single-family residences beyond. The target property was bordered to the south by Manor Boulevard, with single-family residences and a multi-family residential complex beyond. To the west, the target property was bordered by Manor Square Shopping Center and a multi-family residential complex, with Zelma Street and single-family residences beyond.

### **3.0 USER PROVIDED INFORMATION, HISTORICAL REVIEW, AND PHYSICAL SETTINGS**

The user of this assessment is obligated to provide and/or communicate to the environmental professional any information, specialized knowledge, or experience that is material to RECs in connection with the target property, such as the existence of environmental liens or activity and use limitations recorded against the property, property valuation reduction for environmental issues in connection with the target property, commonly known or reasonably ascertainable information within the local community material to RECs, or previous Phase I ESAs in connection with the target property. The ASTM E 1527-13 requires a review of historical documentation to 1940 or first developed use. The earliest reasonably ascertainable historical documentation obtained was dated 1939.

In addition to obtaining user provided information, a review of other readily ascertainable information such as aerial photographs, topographic maps, and flood maps are useful in ascertaining historical uses of the target property and immediately adjoining properties, as well area hydrology and hydrogeology which can be used to provide an indication of the direction that contaminants, if present, could be transported.

Tetra Tech also conducted pertinent interviews in order to ascertain the historical uses of the target property and immediately adjacent properties to evaluate the presence of activity of potential environmental concern. If received, a copy of the completed User Questionnaire is provided in Appendix D.

#### **3.1 INTERVIEW**

Tetra Tech interviewed Mr. Otto Catrina, a real estate broker representing the current owner/seller of the target property, in order to obtain information regarding environmental conditions for the target property. Mr. Catrina has been familiar with the target property for approximately 10 years. He indicated that the target property has been historically utilized as a bowling alley. Mr. Catrina had no knowledge of environmental concerns associated with the target property.

#### **3.2 HISTORICAL INFORMATION**

Table 2 summarizes information obtained from Environmental Data Resources, Inc. (EDR) that was reviewed to ascertain the historical uses of the target property and immediately adjoining properties. A recent aerial photograph for the area in which the target property is located is presented as Figure 3.

**TABLE 2**  
**Historical Resources Reviewed**

Resource	Date
Aerial Photographs	1939
	1946
	1958
	1963
	1968

	1998
	2005
	2009
	2012
2016	
Sanborn Fire Insurance Maps	1961
	1963
	1968

**3.3 PREVIOUS SITE USE**

Tetra Tech’s review of readily available historical aerial photographs (dated 1939, 1946, 1958, 1963, 1968, 1974, 1982, 1993, 1998, 2005, 2009, 2012, and 2016) and Sanborn Fire Insurance maps (dated 1961, 1963, and 1968) indicates the target property consisted of agricultural land improved with multiple structures on the southern and central portions in the 1939 and 1946 aerial photographs. By the 1958 aerial photograph, the agricultural operations appear to have ceased, and multiple structures appear on the northern portion of the target property. Beginning in the 1961 Sanborn Fire Insurance map and the 1963 aerial photograph, the target property is improved with a bowling alley and parking lot. The target property appears relatively unchanged in the remaining Sanborn Fire Insurance maps and aerial photographs. Tetra Tech did not identify a previous use of the target property that would represent a REC.

**3.4 PREVIOUS SURROUNDING SITE USE**

Based on the review of readily available historical aerial photographs, the areas surrounding the target property appear to consist of agricultural land (including orchards) with scattered rural residential properties in the 1939 and 1946 aerial photographs. Manor Boulevard is visible to the adjacent south and Zelma Street is visible to the west in all reviewed aerial photographs. By the 1958 aerial photograph and 1961 Sanborn Fire Insurance map, a single-family residential development is visible to the north, single-family residential

communities appear to south and east, and a commercial shopping center is visible to the west of the target property. Additionally, Corvallis Elementary School, Washington Manor Park, Interstate 880, Bay Area Chinese Bible Church, and Washington Manor Middle School are visible to the northwest, north, northeast, southeast, and southwest of the target property, respectively. In the 1968 aerial photograph, a multi-family residential complex appears to the southeast of the target property. The areas surrounding the target property appear relatively unchanged in the remaining aerial photographs. Tetra Tech did not identify a previous use of the surrounding properties that would represent a REC to the target property.

Based on the historical agricultural use of the target property and surrounding areas, it is possible that environmentally persistent pesticides have been applied to crops grown on or around the target property. However, the normal use and application of agricultural chemicals generally does not trigger enforcement actions, assessments by regulatory agencies or the recommendation for further assessment of the target property unless there is evidence indicating that misuse, dumping, or improper storage of chemicals is present or has occurred. There are no indications of these types of activities or evidence of agricultural chemical mixing, large quantity storage, or materials processing located on or around the target property. Based on the time elapsed since the use of the target property as agricultural land and the disturbance of the shallow soils that likely occurred during re-development of the target property, the former usage of the target property as agricultural land does not represent a REC.

### **3.5 PREVIOUS ENVIRONMENTAL REPORTS**

Tetra Tech's review of available previous reports identified no RECs or concerns for the target property.

### **3.6 PHYSICAL SETTINGS**

A consideration of hydrology and hydrogeology are of interest because they provide an indication of the direction that contaminants, if present, could be transported. Tetra Tech reviewed the following information regarding the physical settings and hydrogeology of the target property and the surrounding area:

**TABLE 3**  
**Summary of Physical Setting**

<b>Information/Resource</b>	<b>Description</b>
Topographic Map	USGS 7.5-minute series Topographic Map of 5641120 San Leandro, California, dated 2012.
EDR Radius Map Report	Overview, detail, and physical setting mapping and supporting soils and hydrogeologic information for the target property, as presented by EDR.

**3.7 GEOLOGIC SETTING AND HYDROGEOLOGY**

The United States Geological Survey (USGS) topographic map indicates the elevation of the target property is approximately 24 feet above mean sea level. The target property slopes generally towards the south. Surface water drainage is expected to flow south. A topographic map for the area in which the target property is located is presented as Figure 4.

The predominant soil type for the target property was obtained from the United States Department of Agriculture (USDA) Soil Survey and described by EDR. Danville Soils are typically well drained silty clay loams to a depth of 79 inches below ground surface (bgs). This soil has slow infiltration rates, has a high corrosion potential for uncoated steel, and is partially hydric. A representative profile of Danville Soils consists of silty clay loam from 0 to 20 inches bgs, silty clay from 20 to 53 inches bgs, and silty clay loam from 53 to 79 inches bgs.

A summary of the soil characteristics description from EDR is provided in the table below.

**TABLE 4**  
**Soils Characteristics**

<b>Soil Component Name</b>	<b>Description</b>
DANVILLE	Soil Surface Texture: Silty Clay Loam Hydrologic Group: Class C – Slow Infiltration Rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures. Hydric Status: Partially Hydric Corrosion Potential for Uncoated Steel: High

Based on review of hydrologic data provided in the EDR Report, there are six federal water wells, no public water supply systems, and four state water wells located within 1 mile of the target property. None of these

water wells appear to be located at the target property. Depth to groundwater was provided for two of the off-site water wells and ranged from 42.89 to 46.10 feet bgs.

According to the Aquiflow<sup>®</sup> Information System results provided in the EDR Report, four groundwater flow direction measurement have been reported from wells within 1 mile of the target property. The EDR Report indicated westerly and southwesterly groundwater flow directions for the wells located between 0.5 and 1 mile east-southeast of the target property. The shallow hydrogeologic gradient flow is assumed to mimic the local topographic gradient in the vicinity of the target property, which is generally to the south. It should be noted that hydraulic gradient with depth and regional groundwater flow direction may vary and be influenced by seasonal changes or local groundwater pumping patterns. Groundwater flow direction measurements would be necessary in order to determine the actual on-site direction and gradient.

## 4.0 REGULATORY REVIEW

Tetra Tech contracted EDR to perform a database search of information published by the state and federal regulatory agencies for the target property and adjacent and surrounding properties and contacted state, local, and/ or municipal agencies for information concerning the target property or nearby properties such as having a past or present records of actual or potential environmental impact or investigation for an environmental impact.

The regulatory listings are limited to only those sites that are known to the regulatory agencies at the time of EDR publication to be contaminated or in the process of evaluation for potential contamination. A copy of the EDR Radius Map Report is not provided in the appendices of this report for brevity.

### 4.1 REGULATORY LISTED FACILITIES

Table 5 below summarizes the results of the review of federal, state, and local regulatory databases. Following the table, as appropriate, are discussions describing the significance of each regulatory agency, site listing, and results of its evaluation with respect to the target property.

**TABLE 5**  
**Regulatory Database Listings**

Federal, State, County, and Local Regulatory Listing	Search Radius (Miles)	Sites Within Minimum ASTM Designated Search Radius of Target Property					
		TP	TP to 1/8	1/8 to 1/4 mile	1/4 to 1/2 mile	1/2 to 1 mile	> 1 mile

TP	Target Property

The target property was not identified on any databases within the EDR Report. The following facilities were identified in the EDR Report within 2 miles of the target property:

- One Hour Manor Cleaners, located adjacent to the west of the target property at 977 Manor Boulevard, appears on the EDR Exclusive Historical Cleaners (Hist Cleaner) and Facility Manifest Data (HAZNET) databases. This facility appears on the HAZNET database in 1998 for the disposal of 0.2293 tons of an aqueous solution with total organic residues less than 10 percent. This facility is listed on the EDR Hist Cleaner database as “One Hour Manor Cleaners” for the years 1987 through 1990. Based on Tetra Tech’s area reconnaissance, this facility is no longer in operation at this location. Based on the historical nature of the listing and lack of known releases, this facility does not represent a REC to the target property.
- Sparkles Cleaners, located adjacent to the west of the target property at 981 Manor Boulevard, appears on the EDR Hist Cleaner databases as “Sparkles Cleaners” for the year 1959 and as “Castle Cleaners” for the years 1975, 1976, and 1978. Based on Tetra Tech’s area reconnaissance, this facility is no longer in operation at this location. Based on the historical nature of the listing and lack of known releases, this facility does not represent a REC to the target property.
- Francis Scott, located approximately 150 feet east of the target property at 14986 Norton Street, appears on the HAZNET database in 2011 for the disposal of 0.8 tons of asbestos-containing waste. Based on the nature of the listing and lack of known releases, this facility does not represent a REC to the target property.
- Hazel Pittman, located approximately 230 feet west-northwest of the target property at 984 Devonshire Avenue, appears on the HAZNET database in 2017 for the disposal of 0.23 tons of asbestos-containing waste. Based on the nature of the listing and lack of known releases, this facility does not represent a REC to the target property.
- Guohong Li, located approximately 685 feet southeast of the target property at 15076 Endicott Street, appears on the HAZNET database in 2011 for the disposal of 0.4 tons of asbestos-containing waste. Based on the nature of the listing and lack of known releases, this facility does not represent a REC to the target property.

- Margaret Brinkman, located approximately 715 feet northwest of the target property at 1017 Mersey Avenue, appears on the HAZNET database in 2014 for the disposal of 0.4 tons of asbestos-containing waste. Based on the nature of the listing and lack of known releases, this facility does not represent a REC to the target property.
- 1X Cal Trans, located approximately 800 feet northeast of the target property at 14938 Crosby Street, appears on the HAZNET database in 1992 for the disposal of 5.8996 tons of asbestos-containing waste. Based on the nature of the listing and lack of known releases, this facility does not represent a REC to the target property.
- Carol Weber, located approximately 840 feet west of the target property at 1109 Bodmin Avenue, appears on the HAZNET database in 2015 for the disposal of 0.23 tons of asbestos-containing waste. Based on the nature of the listing and lack of known releases, this facility does not represent a REC to the target property.
- Faith Fellowship/Faith Fellowship, located approximately 1,215 feet east of the target property at 577 Manor Boulevard, appears on the Leaking Underground Storage Tank (LUST), California Environmental Reporting System (CERS), and HAZNET databases. This facility appears on the CERS database as a LUST cleanup site for a release which was reported on March 28, 2003. According to documents obtained from the State Water Resources Control Board (SWRCB) GeoTracker database, the release was detected during the removal of one 500-gallon UST and one 1,200-gallon UST containing unknown substances. Approximately 239 tons of impacted soil were excavated and removed from the site. On October 7 and 8, 2003, soil and groundwater samples were collected from the site; no constituents above laboratory detection limits were reported. A No Further Action (NFA) letter was issued for the incident on April 23, 2004. This facility appears on the HAZNET database in 2003 for the disposal of varying amounts of waste oil, mixed oil, and empty containers of 30 gallons or more. Based on the current regulatory status, distance, and cross gradient topographic location, this facility does not represent a REC to the target property.
- Jerry Walter, located approximately 1,220 feet northeast of the target property at 3843 Anza Way, appears on the HAZNET database in 1990 for the disposal of varying amounts of an unreported waste, waste oil, and mixed oil and in 2016 for the disposal of 0.23 tons of asbestos-containing

waste. Based on the nature of the listing, distance, and lack of known releases, this facility does not represent a REC to the target property.

- The remaining facilities identified within 2 miles of the target property are greater than 1,250 feet from the target property. Based on the distance, regulatory status, and/or topographic gradient, these facilities are not considered RECs to the target property.

#### **4.2 ORPHAN SUMMARY**

The orphan or unmapped site list consists of sites currently listed in federal or state databases that have inadequate address information. However, if street addresses are available, the site locations are checked against the known location of the target property to determine their relative location to the minimum ASTM search distance from the target property. The EDR Orphan Summary did not identify any orphan sites with a poor or unconfirmed address, or business listing that may be in proximity to the target property.

#### **4.3 VAPOR ENCROACHMENT**

According to the ASTM E 2600-15 “Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions,” a vapor encroachment screen (VES) is a two-tiered screening process used to determine if a vapor encroachment condition (VEC) exists in the subsurface at the target property caused by the release of vapors from contaminated soil or groundwater on or near the target property. The Tier 1 VES relies on information generally collected as part of the Phase I ESA, such as regulatory database listings, chemical use and historical records of prior uses on or near the target property, soil characteristics, geological characteristics, groundwater depth, and groundwater flow direction data. Tier 2 focuses on the characteristics of the contaminated plume resulting from contaminated properties and the proximity of the contaminated plume to the target property. The information utilized during the Tier 2 VES is often found in state regulatory files and other available documents but also may be collected via sampling in the field.

No VES can wholly eliminate uncertainty regarding the identification of VECs in connection with the target property. Screening is intended to reduce, but not eliminate, uncertainty regarding whether or not a VEC exists in connection with the property. The identification of a VEC for the target property is not a determination that a REC is identified for the target property.

As part of this Phase I ESA, Tetra Tech completed a Tier 1 non-invasive VES in accordance with the chemicals of concern and approximate minimum search distances included in ASTM E 2600-15. The following minimum search distances are outlined in ASTM E 2600-15.

**TABLE 6**  
**VES Approximate Minimum Search Distances**

<b>Federal, State, County, and Local Regulatory Database</b>	<b>Chemicals of Concern (Miles)</b>	<b>Petroleum Hydrocarbon Chemicals of Concern (Miles)</b>
NPL	1/3	1/10
SEMS	1/3	1/10
CORRACTS	1/3	1/10
RCRA-TSDF	1/3	1/10
RCRA Generators	Target Property Only	Target Property Only
Institutional/Engineering Controls	Target Property Only	Target Property Only
ERNS	Target Property Only	Target Property Only
State and Tribal-equivalent NPL	1/3	1/10
State and Tribal-equivalent SEMS	1/3	1/10
State and Tribal Landfill or Solid Waste Disposal Sites	1/3	1/10
State and Tribal LUST	1/3	1/10
State and Tribal UST	Target Property Only	Target Property Only
State and Tribal Institutional/Engineering Controls	Target Property Only	Target Property Only
State and Tribal Voluntary Cleanup Program	1/3	1/10
State and Tribal Brownfields	1/3	1/10

Based on the regulatory status, topographic location, underlying lithology, and/or assumed groundwater flow direction, the EDR-listed facilities do not represent VECs to the target property.

#### **4.4 LOCAL AND STATE AGENCY FILE REVIEW/CONTACTS**

Tetra Tech attempted to contact Alameda County to determine if they hold available environmental regulatory files for the target property. A response has not been received. Tetra Tech does not believe that this deviation impairs Tetra Tech’s ability to complete the ESA or render a professional opinion regarding the existence of potential RECs or *de minimis* conditions for the target property.

## **5.0 DEVELOPMENTAL CONDITIONS**

Users may elect to assess and/or investigate other conditions in connection with commercial real estate that are outside the scope of the ASTM E 1527-13 practice. At the request of DHI, Tetra Tech conducted a review of certain non-scope conditions that could potentially influence the course of and/or timeline for the development. Such non-scope considerations are regarded as developmental conditions. Developmental conditions reviewed include the presence of wetlands and floodplains, threatened or endangered species, and the presence of suspect asbestos-containing materials (ACM) and damaged lead-based paint (LBP) in structures located on the target property. No non-scope considerations are included in this assessment beyond those specifically identified in this section.

### **5.1 SUSPECT ASBESTOS-CONTAINING MATERIALS**

Typical building materials that contain asbestos are found in a variety of types and uses. Frequently-encountered types of ACMs used in building construction include floor tile, linoleum, mastic, ceiling tile, spray-applied acoustical or decorative ceiling materials, plaster, drywall and drywall joint compound, insulation, roofing and flashing, and many other materials in common use prior to 1978. Materials that contain over one percent asbestos fibers are considered ACMs and must be handled if disturbed according to Occupational Safety and Health Administration (OSHA) and United States Environmental Protection Agency (EPA) regulations. ACMs identified as “friable” (capable of being crumbled, pulverized, or reduced to powder by hand pressure) have greater potential for release of fibers to the atmosphere and are therefore of greater concern than non-friable ACMs. Friable ACMs that are damaged require renovation or removal and are therefore of greatest immediate concern.

At the time of the site reconnaissance, the target property was improved with a bowling alley and associated parking lot. According to historical aerial photographs and Sanborn Fire Insurance maps, the building was constructed between 1958 and 1961. Based on the age of the structure and the construction materials observed, ACM may be present within the on-site building.

### **5.2 SUSPECT LEAD-BASED PAINT**

The use of LBP in housing was prohibited by the United States EPA in 1979. The Residential Lead-Based Paint Hazard Reduction Act, commonly known as Title X (Ten), was enacted in the United States in 1992

and EPA regulations implementing Title X as to rental property were implemented in September and December of 1996.

At the time of the site reconnaissance, the target property was improved with a bowling alley and associated parking lot. According to historical aerial photographs and Sanborn Fire Insurance maps, the building was constructed between 1958 and 1961. Based on the age of the structure and the construction materials observed, LBP may be present within the on-site building.

### **5.3 WETLANDS**

Tetra Tech reviewed the United States Fish and Wildlife Service (USFWS) National Wetland Inventory (NWI) website for the area that includes the target property. According to the NWI map, no current or historical wetlands were identified on the target property.

### **5.4 THREATENED AND ENDANGERED SPECIES**

Readily available data were reviewed to determine the listed status of the area or county with respect to the presence of threatened or endangered species. Data sources reviewed included the USFWS endangered species protection program database obtained for Alameda County, California. According to the species report, there are 20 endangered species, 12 threatened species, and one candidate species for the county.

No endangered or threatened species were observed during Tetra Tech's site reconnaissance. However, the only conclusive method to evaluate the potential presence of endangered species or critical habitat at the target property is to conduct a site-specific biological/ecological survey.

### **5.5 FLOODPLAIN**

According to the Federal Emergency Management Agency (FEMA) Flood Insurance Rate Map Community Panel Number 06001C0259G dated August 3, 2009, the majority of the target property is located within Zone AE, which represents special flood hazard areas subject to inundation by the 1 percent annual chance (100-year) flood with base flood elevations determined. The northeastern and west-central portions of the target property are located within unshaded Zone X, which represents areas determined to be outside the 0.2 percent annual chance (500-year) flood.

## **5.6 RADON**

According to the EDR Report, the target property lies within EPA Radon Zone 2, which has a predicted average indoor radon screening level greater than or equal to 2 picocuries per liter (pCi/L), and less than or equal to 4 pCi/L. Information provided in the EDR Report indicates that seven state sites and one federal site was sampled for radon within target property zip code 94579. None of the state sites contained radon levels in excess of 4 pCi/L. The radon level for the first floor living area within the federal site was 0.7 pCi/L. A review of zip-code specific radon information provided by the California Department of Health Services indicated that 10 sites were tested within the property zip code of 94579 and that none of these tests yielded radon concentrations exceeding 4 pCi/L; the maximum radon concentration was reportedly 2.2 pCi/L.

## **5.7 OIL AND GAS WELLS AND PIPELINES**

According to the EDR Report, no oil or gas wells are located within 1 mile of the target property. According to EDR Report and National Pipeline Mapping System (NPMS), one high pressure pipeline is located within 1 mile of the target property. The pipeline was identified approximately 1,790 feet southeast of the target property. The pipeline is reportedly an active natural gas line operated by PG&E. Due to distance from the target property, no interviews were conducted with PG&E. Based on the distance from the target property, the off-site pipeline does not represent a REC to the target property.

## **6.0 FINDINGS AND CONCLUSIONS**

Tetra Tech conducted this assessment of the target property in conformance with the scope and limitations of ASTM E 1527-13 standard and AAI.

The results of this assessment have identified no evidence of on-site or off-site RECs for the target property. No further assessment is warranted at this time.

## **7.0 LIMITATIONS**

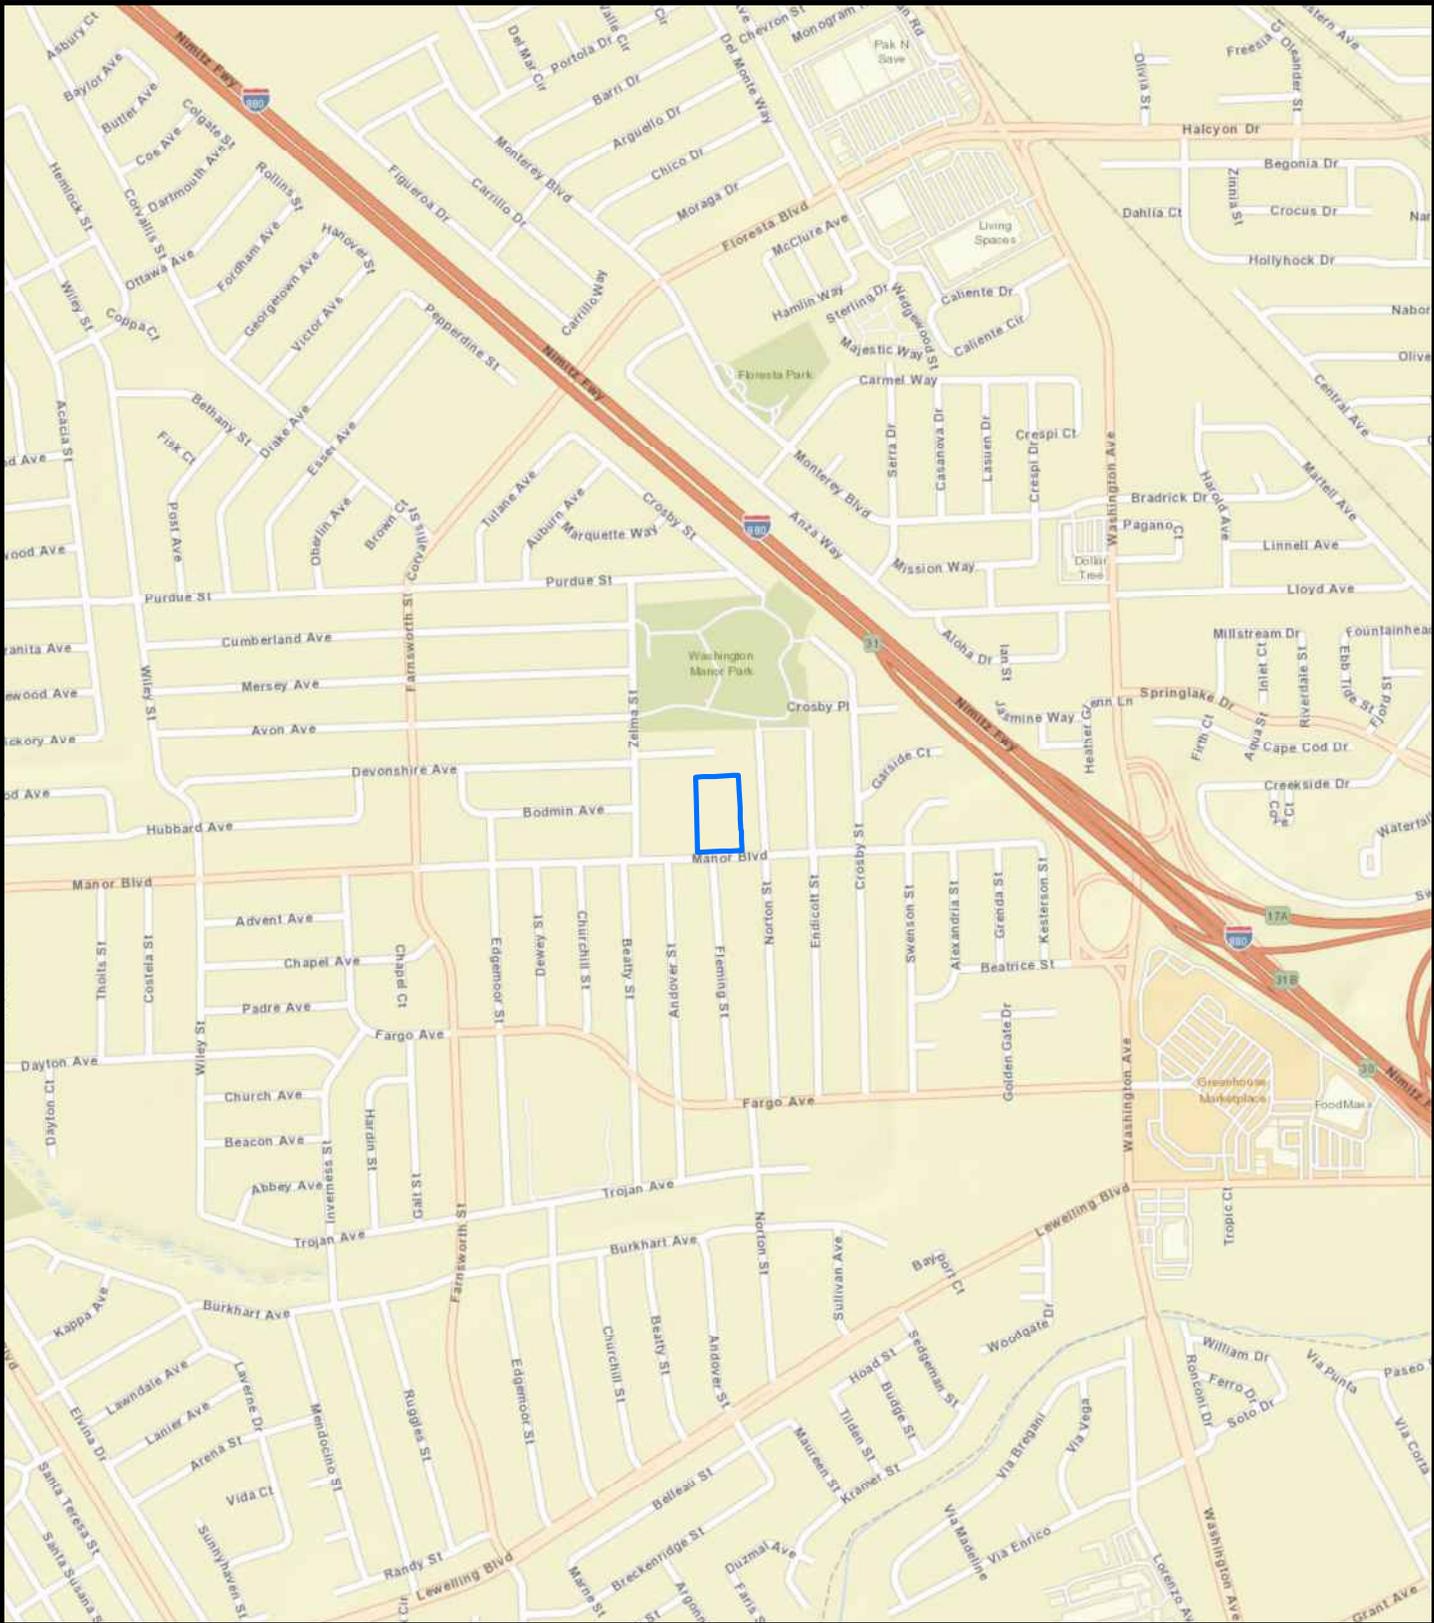

The findings and opinions are relevant to the dates of Tetra Tech’s site work and should not be relied on to represent conditions at later dates.

The opinions included herein are based on information obtained during the study and Tetra Tech’s experience. If additional information becomes available that might impact the environmental conclusions, Tetra Tech requests the opportunity to review the information, reassess the potential concerns, and modify the opinion, if warranted. If this assessment included a review of reports prepared by other consultants, it must be recognized that Tetra Tech has no responsibility for the accuracy of information contained therein.

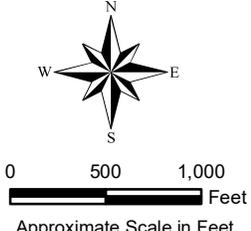

Although this assessment has attempted to identify the potential for contamination of the target property, it cannot be guaranteed that all potential sources of contamination were identified due to: (1) the limited scope of Phase I assessments; (2) the inaccuracy of public records; (3) the presence of undetected and unreported environmental accidents; (4) inaccessible areas; and/or (5) deliberate concealment of detrimental information.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Tetra Tech were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting [www.edrnet.com/sanborn](http://www.edrnet.com/sanborn).

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

## EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

# EXECUTIVE SUMMARY

## TARGET PROPERTY SEARCH RESULTS

The target property was not listed in any of the databases searched by EDR.

## DATABASES WITH NO MAPPED SITES

No mapped sites were found in EDR's search of available ("reasonably ascertainable ") government records either on the target property or within the search radius around the target property for the following databases:

## STANDARD ENVIRONMENTAL RECORDS

### ***Federal NPL site list***

NPL..... National Priority List  
Proposed NPL..... Proposed National Priority List Sites

### SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

### STANDARD ENVIRONMENTAL RECORDS

#### ***Federal CERCLIS NFRAP site list***

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of

## EXECUTIVE SUMMARY

assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 07/19/2019 has revealed that there are 9 SEMS-ARCHIVE sites within approximately 2 miles of the target property.

### ***Federal RCRA non-CORRACTS TSD facilities list***

RCRA-TSDF: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or

## EXECUTIVE SUMMARY

dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

A review of the RCRA-TSDF list, as provided by EDR, and dated 03/25/2019 has revealed that there is 1 RCRA-TSDF site within approximately 2 miles of the target property.

<u>Lower Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>

### ***Federal RCRA generators list***

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 03/25/2019 has revealed that there are 18 RCRA-LQG sites within approximately 2 miles of the target property.

### **State- and tribal - equivalent CERCLIS**

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 04/29/2019 has revealed that there are 32 ENVIROSTOR sites within approximately 2 miles of the target property.

### **State and tribal landfill and/or solid waste disposal site lists**

SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the Integrated Waste Management Board's Solid Waste Information System (SWIS) database.

A review of the SWF/LF list, as provided by EDR, has revealed that there are 2 SWF/LF sites within approximately 2 miles of the target property.

CPS-SLIC: Cleanup Program Sites (CPS; also known as Site Cleanups [SC] and formerly known as Spills, Leaks, Investigations, and Cleanups [SLIC] sites) included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

A review of the CPS-SLIC list, as provided by EDR, has revealed that there is 1 CPS-SLIC site within approximately 0.5 miles of the target property.

## EXECUTIVE SUMMARY

### ***State and tribal registered storage tank lists***

UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the State Water Resources Control Board's Hazardous Substance Storage Container Database.

A review of the UST list, as provided by EDR, has revealed that there are 6 UST sites within approximately 0.5 miles of the target property.

### ***State and tribal voluntary cleanup sites***

VCP: Contains low threat level properties with either confirmed or unconfirmed releases and the project proponents have request that DTSC oversee investigation and/or cleanup activities and have agreed to provide coverage for DTSC's costs.

A review of the VCP list, as provided by EDR, and dated 04/29/2019 has revealed that there are 5 VCP sites within approximately 2 miles of the target property.

### ***Other Ascertainable Records***

PADS: The PCB Activity Database identifies generators, transporters, commercial storers and/or brokers and disposers of PCBs who are required to notify the United States Environmental Protection Agency of such activities. The source of this database is the U.S. EPA.

A review of the PADS list, as provided by EDR, and dated 03/20/2019 has revealed that there are 2 PADS sites within approximately 2 miles of the target property.

## EXECUTIVE SUMMARY

Cortese: The sites for the list are designated by the State Water Resource Control Board (LUST), the Integrated Waste Board (SWF/LS), and the Department of Toxic Substances Control (Cal-Sites).

A review of the Cortese list, as provided by EDR, and dated 06/24/2019 has revealed that there is 1 Cortese site within approximately 0.5 miles of the target property.

<u>Lower Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
<b>SHELL</b> Cleanup Status: OPEN - ASSESSMENT & INTERIM REMEDIAL ACTION	<b>15275 WASHINGTON AVE</b>	<b>SE 1/4 - 1/2 (0.468 mi.)</b>	<b>F32</b>	<b>63</b>

HAZNET: The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000-1,000,000 annually, representing approximately 350,000-500,000 shipments. Data from non-California manifests & continuation sheets are not included at the present time. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, & disposal method. The source is the Department of Toxic Substance Control is the agency. This database begins with calendar year 1993.

A review of the HAZNET list, as provided by EDR, and dated 12/31/2017 has revealed that there are 10 HAZNET sites within approximately 0.25 miles of the target property.

### EDR HIGH RISK HISTORICAL RECORDS

#### ***EDR Exclusive Records***

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected

## EXECUTIVE SUMMARY

listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

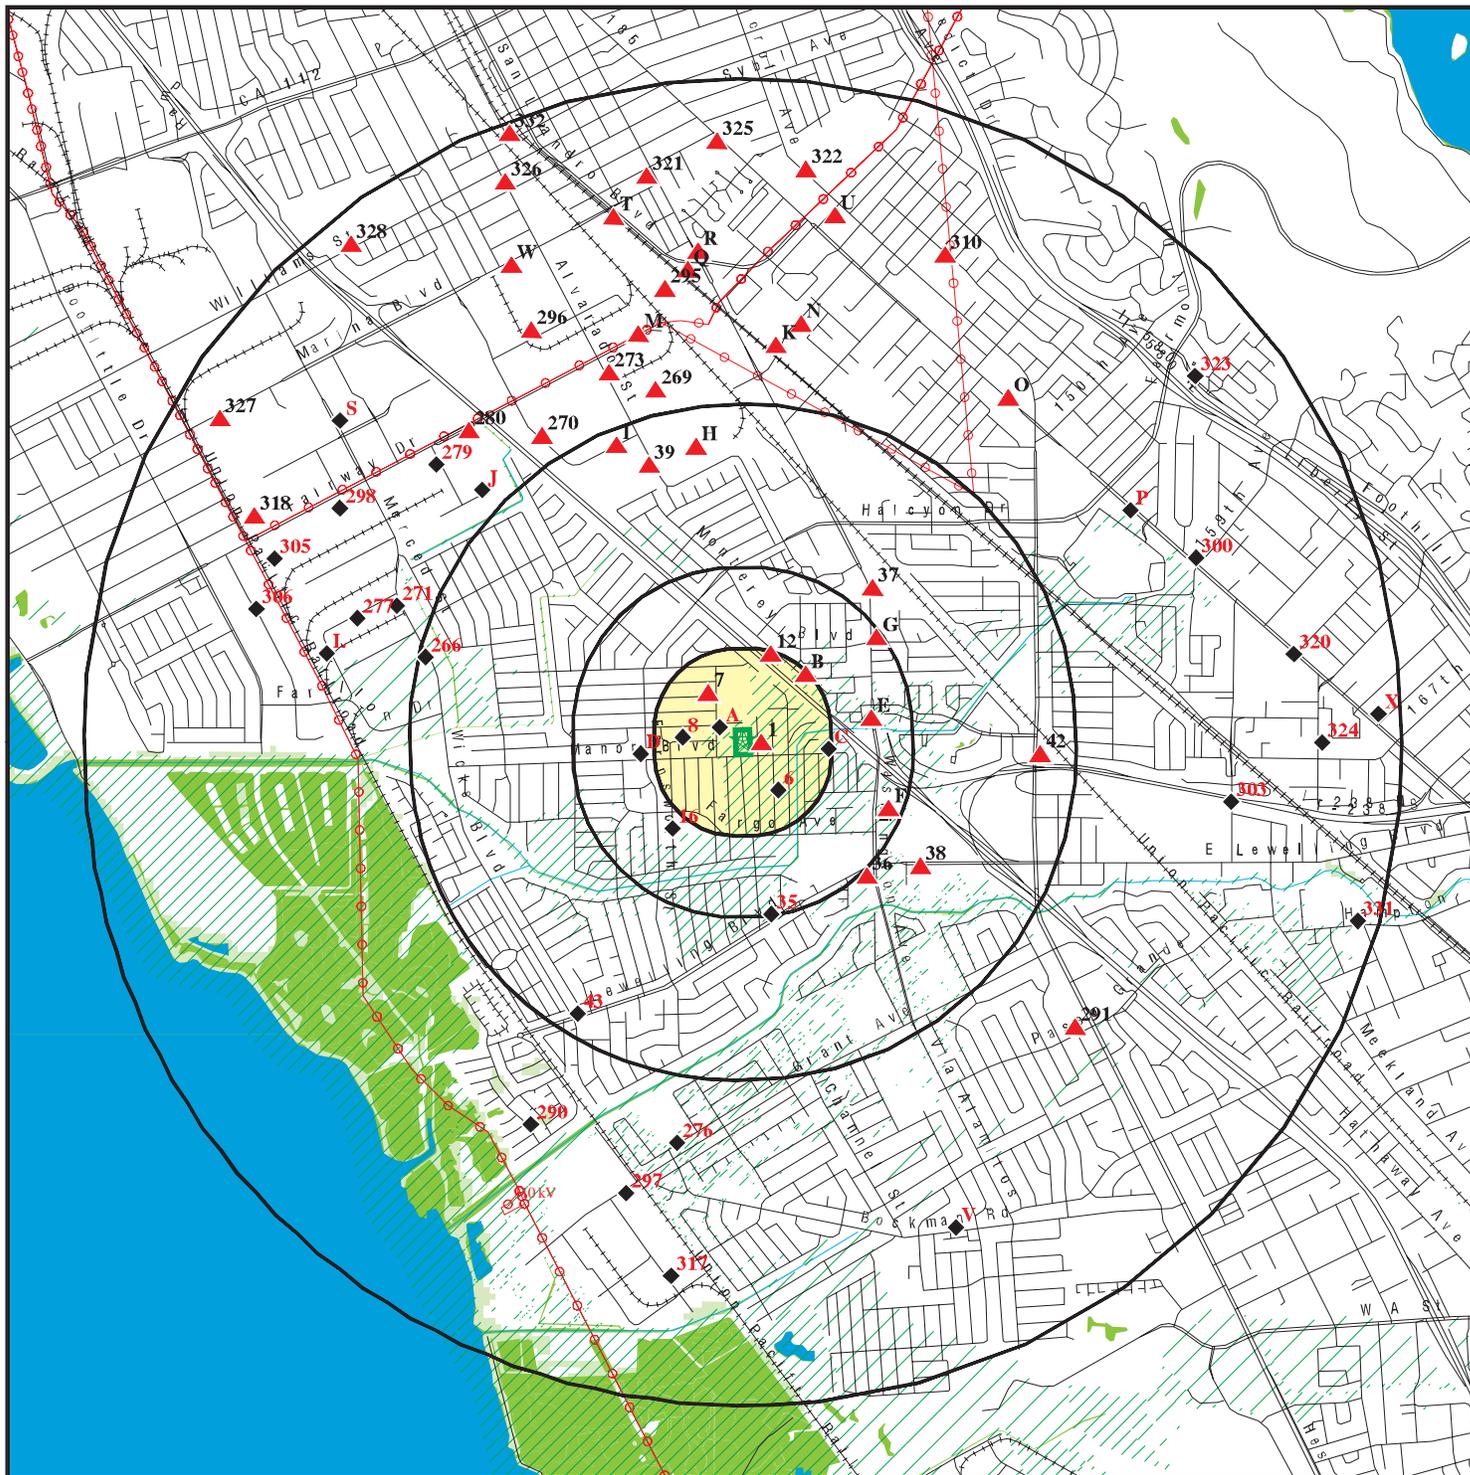

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there are 2 EDR Hist Cleaner sites within approximately 0.25 miles of the target property.

Biennial Reports:

Last Biennial Reporting Year: 2017

Annual Waste Handled:

- Waste code: D001
- Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
- Amount (Lbs): 133
  
- Waste code: D002
- Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.
- Amount (Lbs): 6
  
- Waste code: D007
- Waste name: CHROMIUM
- Amount (Lbs): 43
  
- Waste code: D009
- Waste name: MERCURY
- Amount (Lbs): 99

FINDS:

Registry ID: 110055663394

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Global Id: T0600101226  
Latitude: 37.686690542  
Longitude: -122.1391195  
Status: Open - Assessment & Interim Remedial Action  
Status Date: 01/27/2009  
Case Worker: JES  
RB Case Number: 01-1331  
Local Agency: ALAMEDA COUNTY LOP  
File Location: All Files are on GeoTracker or in the Local Agency Database  
Local Case Number: RO0000372  
Potential Media Affect: Other Groundwater (uses other than drinking water)  
Potential Contaminants of Concern: Gasoline  
Site History: A waste oil tank at the site was removed in June 1987; soils were excavated to a depth of approximately 13 feet bgs. Soil samples collected from beneath the waste oil tank contained 280 milligrams per kilogram (mg/kg) TPH-g and 14 mg/kg benzene; no TPH as diesel (TPH-d) or volatile organic compounds (VOCs) were reported. In addition, four fuel USTs were removed in June 1987, including two 5,000-gallon USTs, a 7,500-gallon UST and an 8,000-gallon UST. A total of four soil samples were collected from the tank pit walls (Samples A-D). Soil sample D reported 910 mg/kg TPH-g; all other soil samples reported less than 100 mg/kg TPH-g. In 1987, three trenches were excavated away from the former tank pit area to a depth of approximately 8.5 feet bgs. TPH-g was detected in soil samples taken from the trenches in concentrations ranging from 100 mg/kg to 730 mg/kg. A total of 500 cubic yards (cy) of soil were removed from the tank pit area, and an additional 200 cy of soil were excavated from trenches in the dispenser areas. A soil vapor extraction (SVE) system was installed at the site and began operation in May 1998. Approximately 1,410 pounds of vapor phase hydrocarbons were removed by the SVE system during operation between 1998 and 1999. The SVE system shut down on October 9, 1999 and removed from the site in 2002. A pilot test for soil vapor extraction was conducted in 2009.

Potential Media Affect: Soil  
Potential Contaminants of Concern: Total Petroleum Hydrocarbons (TPH)  
Site History: The subject property consists of an orchard and private residence located to the north of Lewelling Boulevard in a residential area of San Leandro, California. The property totals approximately 0.67 acres and is improved with two housing units, a detached garage, and a barn. Two (2) underground storage tanks (USTs) were formerly located on the property, one with a capacity of 1,500 gallons and the other with a capacity of 2,500 gallons. The USTs and associated fuel dispenser were removed in December 2014. Bottom and sidewall samples collected from beneath the USTs and fuel dispenser during the removal activities and were found to be impacted by hydrocarbons. Soil cores and groundwater samples were collected to characterize on Site contamination. Samples were found below regulatory levels for petroleum hydrocarbon contaminants.

Description of Events:	EMI JOB #35267/CON-WAY TRUCKLOAD INC.- INCIDENT #2014-061354; ON 06-09-14 A CON-WAY TRUCKLOD INC. (CTI) TRACTOR-TRAILER UNIT (TRAILER #44387) ARRIVED AT THE CONSIGNEE'S FACILITY TO DELIVER A LOAD OF PRODUCTS. THE PRODUCTS WERE CLASS 3 HAZARDOUS MATERIALS AND NON-REGULATED MATERIALS. THE MATERIALS WERE PACKAGED IN 55-GALLON DRUMS 5-GALLON PAILS AND CARTONS. WHILE UNLOADING THE ITEMS IT WAS DISCOVERED THAT A 55-GALLON DRUM (UN1210 PRINTING INK 3 PG II) WAS LEAKING IN THE CTI TRAILER. UPON INSPECTION OF THE DRUM IT WAS OBSERVED THAT THE PRODUCT WAS WEEPING FROM THE SEAM ON THE BOTTOM OF THE DRUM (PACKAGING FAILURE). LESS THAN ONE PINT OF THE PRODUCT HAD BEEN RELEASED AND IMPACTED A SMALL AREA OF THE TRAILER FLOOR. CONSIGNEE PERSONNEL PLACED THE LEAKING DRUM INTO AN OVERPACK DRUM AND CLEANED THE TRAILER FLOOR. THE CONSIGNEE ACCEPTED THE DAMAGED DRUM. NO FURTHER ACTION WAS REQUIRED
Recommendations/Actions Taken:	Continue our on going efforts in driver safety/spill prevention training in efforts in preventing incidents as these from happening.

Description of Events:	DRUM ALONG WITH BOXES WERE SHRINK WRAPPED & BONDED TO A BROKEN PALLET WHICH HAD BEEN STACKED ON TOP OF A SMALLER PALLET WHICH THE WEIGHT OF THE DRUM BROKE THOUGH. WHILE TRYING TO MANEUVER THE FORK LIFT BLADES UNDER NEATH PALLET RIGHT FORK LIFT BLADE PUNCTURED BOTTOM OF DRUM. 2 DOCK WORKERS IMMEDIATELY LAID THE DRUM ON IT SIDE TO PREVENT FURTHER SPILLAGE. TOTAL TIME OF SPILLAGE WAS AROUND 2 MINUTES. THE SPILL WAS CLEANED UP WITH ABSORBENT THEN DRUM WAS LOADED INTO A RECOVER DRUM.

Preparer of Incident Report:	Carrier
Description of Events:	PALLET WAS NOT DAMAGED BUT THERE WERE BOXES THAT WERE WET. APPEARS THE JOSTLING IN TRANSIT CAUSED THE INNER CONTAINERS TO FAIL. IT IS ALSO POSSIBLE THAT IT IS PARTLY DUE TO POOR PACKAGING. AFFECTED CARTONS WERE OVERPACKED AND PLACED DIRECTLY IN SALVAGE DRUMS.
Recommendations/Actions Taken:	NEED BETTER BLOCKING AND BRACING AND POSSIBLY ALSO NEED BETTER PACKAGING.

Preparer of Incident Report:	Carrier
Description of Events:	The dockworker tried to unload the freight with the forklift due to the heavy weight. The forks hit the release valve as they were lowered. The pvc fitting was sheared off the cylinder which released about 5 gallons of foam like product. I originally tried to submit this on E-2018030425 back on March 29th. I contacted HMRequests on 3/29 4/4 4/30 and 5/15 due to UN3500 would not come up in the website as a choice. I had been communicating with Serita McKoy and back in May she received confirmation from the IT department that the commodity was added but stated she tried to search for it and could not find it. That was the last I heard anything.
